## DEAN'S WELCOME

Welcome to the Faculty of Engineering!

This is an exciting time for you, and I encourage you to take advantage of all that the Faculty of Engineering UD offers you during your bachelor's or master's studies. I hope that your time here will be both academically productive and personally rewarding. Think creatively and be confident.

The Faculty of Engineering of the University of Debrecen is at the forefront of the education and training of engineers in the North-Great-Plain Region of Hungary. It is a dynamically developing Faculty with over 3000 students and a highly-qualified and enthusiastic teaching staff of about 80 members. In order to optimize the quality of training the Faculty continuously strives to expand the number of industry and educational partners at home and abroad.

The Faculty was awarded the Quality Prize in 2011 by the Ministry of Education in recognition of its efforts in this field.

I wish you every success in your studies and hope to meet you personally in the near future.

With best wishes

Edit Szűcs

Dean

## HISTORY OF THE UNIVERSITY

The history of Debrecen's higher education dates back to the 16<sup>th</sup> century. The Calvinist Reformed College, established in 1538, played a central role in education, teaching in the native language and spreading Hungarian culture in the region as well as in the whole country. The College was a sound base for the Hungarian Royal University, founded in 1912. Apart from the three academic faculties (arts, law, theology) a new faculty, the Faculty of Medicine was established, and the University soon became one of the regional citadels of Hungarian higher education. Today, University of Debrecen is classified as "University of National Excellence" and offers the highest number of academic programs in the country, therefore it is considered to be one of the best universities in Hungary. Its reputation is the result of its quality training, research activities and the numerous training programs in different fields of science and engineering in English. With 14 faculties and a student body of almost 30.000, out of which about 3700 are international students, the University of Debrecen is one of the largest higher education institutions in Hungary.

The history of the Faculty of Engineering dates back to 1965, when the Technical College was established. In 1972 it was renamed Ybl Miklós Polytechnic and in 1995 it became part of Kossuth Lajos University. In 2000 the Faculty of Engineering became part of the integrated University of Debrecen.

In 2005 the Bologna System was introduced which supports the competitiveness of qualifications received at the University of Debrecen against universities all over Europe.

The Faculty of Engineering is practice-oriented and develops skills required for the current needs of the national and international labour market. The teaching staff is involved in numerous domestic and international research and design projects. The recently-opened new building wing with its ultra-modern design hosts several lecture halls, seminar rooms and laboratories equipped with the latest technology. Our students are provided with practical knowledge, training and field practice from numerous prestigious domestic and multi-national industry partners. The internship periods are excellent opportunities for students to experience how theory is put into practice at the most renowned industry representatives and become more successful in the labour market of this highly competitive sector. Students learn how to work in the working environment of multi-national companies and adapt to challenges easily. After graduation they will be able to work at a strategic decision-making level, giving priority to efficiency and engineering ethics.

The Faculty of Engineering offers a great variety of BSc, MSc courses and post-graduate training courses tailored to the needs of the rapidly changing world of engineering and focusing on European and international trends. In 2011 the Faculty of Engineering launched engineering trainings in English. In order to optimize the quality of training, the Faculty continuously strives to expand the number of industrial and educational partners at home and abroad.

The Faculty of Engineering has been a pioneer in the introduction of Quality Management System at faculty level to measure and evaluate the efficiency of its education and teaching staff in order to improve the quality of education and training from the feedback received.

The Faculty of Engineering has a vivid student life. There is a film club waiting for movie buffs and the door of the Faculty library is always open. The library is not only the host to the latest

technical books, exhibitions and tea afternoons with invited speakers, but students can also purchase theatre and concert tickets from the librarians. The Borsos József Dormitory is also a hub of activities for students.

The increasing number of international students brings cultural and ethnic diversity to the faculty.

Our aim is to aid students to become efficient members of the labour market and enrich the world of engineering in Hungary and abroad with their knowledge and expertise.

## ADMINISTRATION UNITS FOR INTERNATIONAL PROGRAMMES

### COORDINATING CENTER FOR INTERNATIONAL EDUCATION

98, Nagyerdei Boulevard, Debrecen 4032

Telephone: +36-52-512-900/62796

E-mail: info@edu.unideb.hu

Program Director (Non-Medical Programmes)	Dr. László Kozma
Admission Officer	Ms. Ibolya Kun
Administrative Assistant	Ms. Dóra Deme
Administrative Assistant	Ms. Lilla Fónai
Administrative Assistant	Mr. Ádám Losonczi
Administrative Assistant	Ms. Annamária Rác

The Coordinating Center for International Education supports the international degree programmes of the University of Debrecen in giving new students information on admission and entrance exam. It has tasks in promoting and is in charge of tasks like enrolment, study contracts, modifying student status or degree programme, activating student status, modifying students' personal data, requesting and updating student cards, providing certificates for the Immigration Office (for residence permit), issuing student status letters and certificates on credit recognition, concluding health insurance contract and providing Health Insurance Card, helping students with visa process application.

### STUDENT ADMINISTRATION CENTER

1, Egyetem Square, Debrecen H-4032 (basement of Kossuth Lajos Dormitory II)

This administration unit is in charge of registering new students, checking students' FIR data, charging tuition fees and other fees, transferring scholarship, issuing diploma/degree certificate.

## INTERNATIONAL OFFICE AT THE FACULTY OF ENGINEERING

2-4, Ótemető Street, Debrecen H-4028

Telephone: +36-52-415-155/78709

Head of International Office room 122	Zsolt Tiba PhD habil. tiba@eng.unideb.hu
International Relations Officer room 123	Ms. Judit Bak bakjudit@eng.unideb.hu
International Relations Officer room 123	Ms. Erika Thomas thomas.erika@eng.unideb.hu
International Relations Officer room 124	Ms. Zita Popovicsné Szilágyi szilagyizita@eng.unideb.hu
International Relations Officer room 206	Ms. Ágnes György agnes@eng.unideb.hu

The International Office has been functioning since 2014 in order to ensure the smooth running of the international degree courses. The office is responsible for student administration (full-time students, full-time transfer students, visiting/Erasmus students), providing certificates for students, considering and accepting requests, solving problems related to course registration, giving information about internship, final exam, thesis, etc.

## DEAN'S OFFICE

Faculty of Engineering  
2-4, Ótemető Street, Debrecen H-4028

Dean: Ms. Edit Szűcs Prof. Dr. habil.

E-mail: [dekan@eng.unideb.hu](mailto:dekan@eng.unideb.hu)

Vice-Dean for Educational Affairs: Géza Husi PhD habil.

E-mail: [husigeza@eng.unideb.hu](mailto:husigeza@eng.unideb.hu)

Vice-Dean for Scientific Affairs: Ferenc Kalmár PhD

E-mail: [kalmarf@eng.unideb.hu](mailto:kalmarf@eng.unideb.hu)

Head of Directory Office: Ms. Noémi Dr. Bíró Siposné

E-mail: [bironoemi@eng.unideb.hu](mailto:bironoemi@eng.unideb.hu)

## DEPARTMENTS OF FACULTY OF ENGINEERING

Department of Air- and Road Vehicles  
Department of Architecture  
Department of Basic Technical Studies  
Department of Building Services and Building Engineering  
Department of Civil Engineering  
Department of Engineering Management and Enterprise  
Department of Environmental Engineering  
Department of Mechanical Engineering  
Department of Mechatronics  
Off-Site Department of Aviation Engineering

### DEPARTMENT OF AIR- AND ROAD VEHICLES

2-4 Ótemető street, Debrecen, H-4028, room 120, Tel: +36-52-512-900 / 77742

name, position	e-mail, room number
Géza Husi Ph.D. habil. Associate Professor, Head of Department	husigeza@eng.unideb.hu Building A, room 120
Ms. Marianna Ricz, Administrative Assistant	riczmariann@eng.unideb.hu Building A, room 120

### DEPARTMENT OF ARCHITECTURE

2-4, Ótemető Street, Debrecen, H-4028, room 409, Tel: +36-52-512-900 / 78704

name, position	e-mail, room number
Tamás Szentirmai DLA, Associate Professor, Head of Department	szentirmai.tamas@gmail.com room 409
Antal Puhl DLA, Professor	puhl@puhlarchitect.hu room 409
Balázs Falvai DLA, Associate Professor	balazs@dmbmuterem.hu room 409

Péter Kovács DLA, Associate Professor	kovacs.pe@chello.hu room 409
Dávid Török DLA, Associate Professor	david@dmbmuterem.hu room 409
Gábor Zombor DLA, Collage Associate Professor	zombor@monomorph.hu room 409
Miklós János Boros DLA, Senior Lecturer	boros.miklos.janos@gmail.com room 409
Ms. Edit Huszthy DLA, Senior Lecturer	huszthyedit@gmail.com room 409
Béla Bogdándy PhD, Senior Lecturer	bogdandy.bela@gmail.com room 409
Ferenc Kállay, Assistant Lecturer	kallay.epitesz@t-online.hu room 409
Ferenc Keller, Master Lecturer	kellerfeco@gmail.com room 409
Ms. Anita Tóth-Szél, Administrative Assistant	szelanita@eng.unideb.hu room 409
Ferenc Kállay, Assistant Lecturer	kallay.epitesz@t-online.hu room 409

## DEPARTMENT OF BASIC TECHNICAL STUDIES

2-4 Ótemető street, Debrecen, H-4028, ground floor 6, Tel: +36-52-512-900 / 77735

name, position	e-mail address, room number
Imre Kocsis Ph.D, College Professor, Head of Department	kocsisi@eng.unideb.hu ground floor 2
Gusztáv Áron Szíki Ph.D, College Professor	szikig@eng.unideb.hu ground floor 7
Ms. Mária Krauszné Princz Ph.D, Associate Professor	pmaria@delfin.unideb.hu ground floor 4
Balázs Kulcsár Ph.D, Associate Professor	kulcsarb@eng.unideb.hu ground floor 4
Ms. Rita Nagyné Kondor Ph.D, Associate Professor	rita@eng.unideb.hu ground floor 7
Csaba Gábor Kézi Ph.D, College Associate Professor	kezicsaba@science.unideb.hu ground floor 7
Ms. Adrienn Varga Ph.D, College Associate Professor	vargaa@eng.unideb.hu ground floor 5
Ms. Gyöngyi Szanyi, Assistant Lecturer	szanyi.gyongyi@science.unideb.hu ground floor 6
Ms. Éva Csernusné Ádámkó, Assistant Lecturer	adamko.eva@eng.unideb.hu ground floor 3/1
Ms. Erika Perge, Senior Lecturer	perge@eng.unideb.hu ground floor 6

Attila Vámosi, Master Lecturer	vamosi.attila@eng.unideb.hu ground floor 5
Ms. Dóra Sebők-Sipos, Administrative Assistant	dorasipos@eng.unideb.hu ground floor 3/1

## DEPARTMENT OF BUILDING SERVICES AND BUILDING ENGINEERING

Ótemető street 2-4., Debrecen, H-4028, room 121, Tel: +36-52-512-900 / 77770

name, position	e-mail, room number
Ferenc Kalmár Ph.D, College Professor, Vice-Dean for Scientific Affairs	fkalmar@eng.unideb.hu room 121/324.7
Imre Csáky Ph.D., Associate professor, Head of Department	imrecsaky@eng.unideb.hu room 302/c
Ákos Lakatos Ph.D, Associate Professor, Deputy Head of Department	alakatos@eng.unideb.hu room 302/a
Ms. Tünde Klára Kalmár Ph.D, Associate Professor	kalmar_tk@eng.unideb.hu room 324/5
Zoltán Verbai Ph.D, Senior Lecturer	verbai@eng.unideb.hu room 324/2
Ferenc Szodrai Ph.D, Senior Lecturer	szodrai@eng.unideb.hu room 324/8
Attila Kerekes Ph.D, Senior Lecturer	kerekesa@eng.unideb.hu room 324/3
Béla Bodó, Master Lecturer	bela.bodo@eng.unideb.hu room 324/4
Sándor Hámori, Assistant Lecturer	sandor.hamori@eng.unideb.hu room 324/8

Gábor L. Szabó, Assistant Lecturer	l.szabo.gabor@eng.unideb.hu room 324/2
András Zöld Ph.D, Emeritus	profzold@yahoo.fr room 324/3
Ms. Lola Csibi, Administrative Assistant	lola@eng.unideb.hu room 302

### DEPARTMENT OF CIVIL ENGINEERING

2-4 Ótemető street, Debrecen, H-4028, room 209, Tel: +36-52-512-900 / 78701

name, position	e-mail, room number
Imre Kovács Ph.D, College Professor, Head of Department	dr.kovacs.imre@eng.unideb.hu room 212/e
József Garai Ph.D. habil., Professor	garai.jozsef@eng.unideb.hu room 212/c
György Csomós Ph.D, College Professor	csomos@eng.unideb.hu room 209/c
János Major Ph.D. habil., College Professor	drmajorjanos@eng.unideb.hu room 212/c
Ms. Kinga Nehme Ph.D, Associate Professor	knehme@eng.unideb.hu room 209/b
Ms. Herta Czédli Ph.D, College Associate Professor	herta.czedli@eng.unideb.hu room 209/e
Ms. Gabriella Hancz Ph.D, College Associate Professor	hgabi@eng.unideb.hu room 209/a
Zoltán Bereczki, Senior Lecturer	bereczki.zoltan@eng.unideb.hu room 212

László Radnay Ph.D, College Associate Professor	laszlo.radnay@eng.unideb.hu room 209/c
Zsolt Varga Ph.D, Senior Lecturer	vzs@eng.unideb.hu room 119, Lab
Ms. Krisztina Kozmáné Szirtesi, Assistant Lecturer	kszk@eng.unideb.hu room 212/b
Ms. Beáta Pataki, Assistant Lecturer	pataki.bea@eng.unideb.hu 209/e
Ádám Ungvárai, Assistant Lecturer	ungvarai@eng.unideb.hu room 212/a
János Bíró, Master Teacher	biroj@eng.unideb.hu room 119, Lab
Zsolt Martonosi, Master Teacher	martonosisz@eng.unideb.hu room 212/b
László Tarcsai, Master Teacher	tarcsai@eng.unideb.hu room 212/a
József Kovács, Technical Assistant	j.kovacs@eng.unideb.hu room 209/b
Zsolt Vadai, Master Teacher	vadai@eng.unideb.hu room 209/e
Titusz Igaz, Lecturer	igaz.titusz@gmail.com room 212/b
Péter Lugosi, Technical Assistant	lugosi.peter@eng.unideb.hu room 209/e
Ms., Mónika Tóthné Csákó, Administrative Assistant	csmoni@eng.unideb.hu room 212

## DEPARTMENT OF ENGINEERING MANAGEMENT AND ENTERPRISE

2-4 Ótemető street, Debrecen, H-4028, room 204, Tel: +36-52-512-900 / 77742

name, position	e-mail, room number
Ms. Edit Szűcs Dr. habil., Collage Professor, Head of Department	dekan@eng.unideb.hu room 204/a
Géza Lámer Ph.D, College Professor	glamer@eng.unideb.hu room 202/b
István Budai Ph.D, Associate Professor	budai.istvan@eng.unideb.hu room 202/a
Ms. Judit T. Kiss Ph.D, Associate Professor	tkiss@eng.unideb.hu room 202/a
Ms. Andrea Emese Matkó Ph.D., College Associate Professor	andim@eng.unideb.hu room 206
Ms. Kata Anna Váró Ph.D., College Associate Professor	varokata@eng.unideb.hu room K3
János Szendrei Ph.D., Senior Lecturer	szendrei.janos@eng.unideb.hu room 202/d
Ms. Éva Dr. Bujalossné Kóczán, Master Teacher	beva@eng.unideb.hu room 202/c
Ms. Éva Diószeginé Zentay, Master Teacher	zentayevi@eng.unideb.hu room 202/c
Ms. Noémi Siposné Bíró, Master Teacher	biro-noemi@unideb.hu
Tibor Balla, Assistant Lecturer	btibor@eng.unideb.hu room 202/e

Attila Halczman, Assistant Lecturer	haat@eng.unideb.hu room 202/e
Ms. Anita Dr. Mikó-Kis, Assistant Lecturer	drkisanita@eng.unideb.hu room 202/f
Róbert Sztányi, Assistant Lecturer	sztanyir@eng.unideb.hu room 202/g
Emil Varga, Assistant Lecturer	emil@eng.unideb.hu room 202/g
Tünde Jenei, Departmental Teacher	jeneit@eng.unideb.hu room 202/b
Gyula Mikula, Departmental Engineer	mark@eng.unideb.hu room 202/f
Ms Ágnes György, Administrative Assistant, Lecturer	agnes@eng.unideb.hu room 206
Ms. Magdolna Anton Sándorné, Administrative Assistant	magdi@eng.unideb.hu room 204

### DEPARTMENT OF ENVIRONMENTAL ENGINEERING

2-4 Ótemető Street, Debrecen, H-4028, room 312, Tel: +36-52-512-900 / 77827

name, position	e-mail, room number
Ms. Ildikó Bodnár Ph.D, College Professor, Head of Department	bodnari@eng.unideb.hu room 312
Norbert Boros Ph.D, Associate Professor	nboros@eng.unideb.hu room 313
Ms. Andrea Keczánné Üveges Ph.D, Associate Professor	auveges@eng.unideb.hu room 313

Dénes Kocsis Ph.D, Senior lecturer	kocsis.denes@eng.unideb.hu room 310
Sándor Fórián, Master lecturer	forian@eng.unideb.hu room 313
Ms. Alexandra Truzsi, PhD student	truzsi.alexandra@eng.unideb.hu room 309
Ms. Andrea Izbékiné Szabolcsik, Assistant Lecturer	szabolcsikandi@eng.unideb.hu room 310
Lajos Gulyás Ph.D, Emeritus College Professor, Lecturer	lgulyas@eng.unideb.hu room 324/1
Ms. Andrea Halászné Ercsei, Administrative Assistant	halaszneandi@eng.unideb.hu room 312

## DEPARTMENT OF MECHANICAL ENGINEERING

2-4 Ótemető street, Debrecen, H-4028, room 304, Tel: +36-52-512-900 / 77776

name, position	e-mail, room number
Tamás Mankovits Ph.D, Associate Professor, Head of Department	tamas.mankovits@eng.unideb.hu room 304
Lajos Dr. Fazekas Ph.D, College Professor	fazekas@eng.unideb.hu room 324/9
Zsolt Tiba Dr. habil, College Professor	tiba@eng.unideb.hu room 303
Ms. Ágnes Battáné Gindert-Kele Dr. Ph.D, Associate Professor	battane@eng.unideb.hu room 306

Sándor Bodzás Ph.D, Associate Professor, Deputy Head of Department	bodzassandor@eng.unideb.hu room 308
Levente Czégé, Ph.D. Associate Professor	czege.levente@eng.unideb.hu room 307
György Juhász Ph.D. Associate Professor	juhasz@eng.unideb.hu room 306
Sándor Hajdu Ph.D. College Associate Professor, Deputy Head of Department	hajdusandor@eng.unideb.hu room 307
Sándor Pálincás Ph.D. College Associate Professor	palinkassandor@eng.unideb.hu room 308
József Menyhárt Ph.D. Senior Lecturer	jozsef.menyhart@eng.unideb.hu room 305
Gábor Balogh Assistant Lecturer	balogh.gabor@eng.unideb.hu room 305
Krisztián Deák Assistant Lecturer	deak.krisztian@eng.unideb.hu room 305
Dávid Huri Assistant Lecturer	huri.david@eng.unideb.hu room 324/6
Zsolt Békési Assistant Lecturer	zsolt.bekesi@eng.unideb.hu room 324/6

Tibor Pálfi Department Teacher	tibor.palfi@eng.unideb room 301
Márton Lévai Engineer Teacher	levai@eng.unideb.hu room U.0.16
András Gábora Department Engineer	andrasgabora@eng.unideb.hu room U.0.16
Tamás Antal Varga Department Engineer	varga.tamas@eng.unideb.hu room 301
Zoltán Gergő Géresi Assistant	zoltan.geresi@eng.unideb.hu room U.0.16
Ms. Lilla Csonkáné Dóró Administrative Assistant	lilla.csonkane@eng.unideb.hu room 304
Ms. Szandra Sitku Administrative Assistant	szandra.sitku@eng.unideb.hu room 304

### DEPARTMENT OF MECHATRONICS

2-4 Ótemető street, Debrecen, H-4028, room 120, Tel: +36-52-512-900 / 77742

name, position	e-mail, room number
Géza Husi Ph.D. habil. Associate Professor, Head of Department	husigeza@eng.unideb.hu Building A, room 120
Péter Tamás Szemes Ph.D., Associate Professor	szemespeter@eng.unideb.hu Building B, room 3
János Tóth Ph.D., Associate Professor	tothjanos@eng.unideb.hu Building B, room 1
Kornél Sarvajcz, Assistant Lecturer, PhD student	sarvajcz@eng.unideb.hu Building B, room 1

Ms. Emese Bánóczy-Sarvajcz, Assistant Lecturer	emese.banoczy@eng.unideb.hu Building B, room 4
Gyula Attila Darai, Departmental Engineer	darai@eng.unideb.hu Building B, room 1
István Nagy Ph.D., Departmental Engineer	nistvan@eng.unideb.hu Building B, room 2
Timotei István Erdei, Departmental Engineer	timoteierdei@eng.unideb.hu Building B, Robotics Laboratory
Almusawi Husam Abdulkareem, Departmental Engineer	husam@eng.unideb.hu Building B, room 5
Ms. Syeda Adila Afghan, PhD student	adila@eng.unideb.hu Building B, room 4
Ms. Marianna Ricz, Administrative Assistant	riczmariann@eng.unideb.hu Building A, room 120

### DEPARTMENT OF AVIATION ENGINEERING

1 Szatke Ferenc street, Debrecen, H-4030, Tel: +36-52-870-270, [www.pharmaflight.hu](http://www.pharmaflight.hu)

name, position	e-mail, room number
Dr. Enikő Földi, Executive Director	training@pharmaflight.hu
Gyula Győri, Honorary Associate Professor	training@pharmaflight.hu
Gabriella Illés, Program Coordinator	training@pharmaflight.hu

## ACADEMIC CALENDAR

General structure of the academic year:

Study period	1 <sup>st</sup> week	Registration*	1 week
	2 <sup>nd</sup> – 7 <sup>th</sup> week	Teaching Block 1	6 weeks
	8 <sup>th</sup> week	1 <sup>st</sup> Drawing Week	1 week
	9 <sup>th</sup> – 14 <sup>th</sup> week	Teaching Block 2	6 weeks
	15 <sup>th</sup> week	2 <sup>nd</sup> Drawing Week	1 week
Exam period	directly after the study period	Exams	7 weeks

\*Usually, registration is scheduled for the first week of September in the fall semester, and for the first week of February in the spring semester.

### ACADEMIC CALENDAR OF THE FACULTY OF ENGINEERING 2018/2019

<b>Opening ceremony of the academic year</b>	Sunday 9 September 2018
Registration week	3-7 September 2018
Revision week (exams in exam courses may be scheduled during this week)	3-7 September 2018
<b>1<sup>st</sup> semester study period in MSc and BSc programs</b>	10 September 2018 - 14 December 2018 (14 weeks) In case of finalist courses: 10 September 2018 - 9 November 2018 (9 weeks)
<b>Career Days – “Industry Days in Debrecen 2018”</b> (working days without teaching for Mechanical Eng. BSc, Mechanical Eng. MSc, Mechatronic Eng. BSc, Mechatronic Eng. MSc, Civil Eng. BSc students)	11-12 October 2018
<i>6<sup>th</sup> ISCAME (International Scientific Conference on Advances in Mechanical Engineering)</i> <i>VI. Exhibition on Mechanical Engineering</i>	11-12 October 2018

(organised by the Department of Mechanical Engineering)	
<i>Career Days in Environmental Engineering</i> (organised by the Department of Environmental Engineering)	11-12 October 2018
<i>Career Days in Mechatronics (exhibition, company presentations)</i> (organised by the Department of Mechatronics)	11-12 October 2018
Conference, entitled “ <i>Árkádia</i> ” (organised by the Department of Architectural Engineering)	12 October 2018
Conference, entitled “ <i>Problem-Based Learning in Engineering Education</i> ” (organised by the Department of Basic Technical Studies)	12 October 2018
<i>Career Days in Civil Engineering</i> (organised by the Department of Civil Engineering)	7-9 November 2018
Reporting period I (Drawing week I)	24 - 26 October 2018 (3 working days without scheduled lessons, consultation schedule announced previously)
Reporting period II (Drawing week II)	10-14 December 2018 (5 working days without scheduled lessons, consultation schedule announced previously)
<b>Faculty Conference of Scientific Students’ Association</b>	11 December 2018
<b>1<sup>st</sup> semester examination period</b>	17 December 2018 - 1 February 2019 (7 weeks) In case of finalist courses: 12 November - 14 December 2018 (5 weeks)
Thesis (BSc, MSc) submission deadline	According to the decision of the department but max. 14 days of the beginning of the final examination period.

Final examination period	<p>According to the decision of the department at least one occasion between 17 December 2018 and 1 February 2019.</p> <p>The department shall announce the date of the final examination until 15 September 2018.</p>
Registration week	4 - 8 February 2019
<b>2<sup>nd</sup> semester study period in MSc and BSc programs</b>	<p>11 February - 17 May 2019 (14 weeks)</p> <p>In case of finalist courses: 11 February - 12 April 2019 (9 weeks)</p>
<b>Conferences</b>	
Conference, entitled <i>“Challenges and Opportunities in the Field of Management”</i> (organised by the Department of Engineering Management and Enterprise)	21-22 March 2019
<i>Career Days in Civil Engineering</i> (organised by the Department of Civil Engineering)	21-22 March 2019
International conference, entitled <i>“Electrical Engineering and Mechatronics Conference EEMC’19”</i> (organised by the Department of Mechatronics)	21-22 March 2019
<i>Career Days in and Exhibition on Building Services Engineering</i>	9-10 May 2019
Reporting period I (Drawing week I)	<p>25 - 29 March 2019</p> <p>(5 working days without scheduled lessons, consultation schedule announced previously)</p>
Reporting period II (Drawing week II)	<p>13 – 17 May 2019</p> <p>(5 working days without scheduled lessons, consultation schedule announced previously).</p>
<b>2<sup>nd</sup> semester examination period</b>	<p>20 May - 5 July 2019 (7 weeks)</p> <p>In case of finalist courses: 15 April - 17 May 2019 (5 weeks)</p>
Thesis (BSc, MSc) submission deadline	According to the decision of the department but max. 14 days of the beginning of the final examination period.

Final examination period	According to the decision of the department at least one occasion between 20 May 2019 and 5 July 2019. The department shall announce the date of the final examination until 15 February 2019.
--------------------------	---

## THE CIVIL ENGINEERING UNDERGRADUATE PROGRAM

### INFORMATION ABOUT THE PROGRAM

Name of master's program:	Civil Engineering Undergraduate Program
Specializations available:	Structural Engineering Specialization
Field, branch:	engineering; civil engineering and mechanical earth sciences
Level:	undergraduate
Qualification:	Civil Engineer
Mode of attendance:	Full-time
Faculty:	Faculty of Engineering
Program coordinator:	Dr. Imre Kovács head of department, college professor
Person in charge of the specialization:	Dr. László Radnay college associate professor specialized on structural engineering
Program length:	8 semesters
Credits total:	240

#### **Objectives of the undergraduate programme, competences to be acquired:**

The objective of the programme is to train civil engineers who are able to assume structural, maintenance and operation, business and managerial tasks on buildings, to solve problems of design and simple tasks of development, complex civil engineering planning. They are up to improve their professional academic knowledge in the master programme.

#### **Professional competences to be acquired**

##### **a) knowledge**

He/She knows

- the most frequently applied structural materials, their properties and their terms of application in the field of civil engineering.
- the essential design principles and methods applied in civil engineering.
- the essential processes in building technology, the operating principles of applied equipment and machineries
- the methods and principles of groundwork, geomechanics.

- the most frequently applied procedures of measurement and survey in civil engineering and their tools, instruments, measuring machinery.
- the professional theoretical and practical building-maintenance methods of bridge art.
- information and information communication methods and procedures in association with his/her profession.
- major standards in the field of civil engineering
- the major work and fire safety requirements and environmental protection regulations in the field of civil engineering.
- the basics of logistics, management and quality assurance, law, economics forms an integral part of civil works.
- the methods of data collection ,learning and their ethical limitations in the field of civil engineering.

### **b) skills**

He/She is able to

- understand behaviour of buildings and phenomena that affect engineering work.
- apply models of civil engineering design and methods of calculation.
- apply technical specifications on building constructions and operation.
- communicate in engineering way (eg. through drawings).
- achieve as a technical leader, civil engineering inspector and constructing, accessibility, maintenance, operation, enterprise, administration tasks in every field of civil engineering.
- achieve civil engineering subtasks in the field of urban system operation and engineering
- solve simple design and development tasks individually in narrower field of civil engineering, participate in complex design and development tasks with his/her civil engineering knowledge.
- work up and apply technical literature.

### **c) attitude**

He/She is capable to

- complete tasks at high quality to the best of his/her ability
- be open to complete his/her tasks individually but in collaboration with other participants.
- endeavour to solve tasks and make decision with learning the opinion of the directed colleagues preferably in harmony with it.
- be open to learn professional and technological development in the field of civil engineering and preferably his/her restricted specialty.
- aim at continuous self-training.
- pay attention to the principles and application of environment protection, quality politics, equal access, the principles of health and safety at work and engineering ethics. He/she takes care of facilitating and treating employees' professional improvement

**d) autonomy and responsibility**

He/She

- makes decisions on simple design, structural, maintenance-operation, enterprise and authority tasks in the field of civil engineering.
- manages and controls his/her staff according to his/her leader's guidance of his/her leader, checks the operation of applied equipment and machinery.
- evaluates the efficiency, security of the staff work.
- monitors the legal, technical, technological and administrative changes in the professional field.

## COMPLETION OF THE ACADEMIC PROGRAM

### The Credit System

Majors in the Hungarian Education System have generally been instituted and ruled by the Act of Parliament under the Higher Education Act. The higher education system meets the qualifications of the Bologna Process that defines the qualifications in terms of learning outcomes: statements of what students know and can do on completing their degrees. In describing the cycles, the framework uses the European Credit Transfer and Accumulation System (ECTS).

ECTS was developed as an instrument of improving academic recognition throughout the European Universities by means of effective and general mechanisms. ECTS serves as a model of academic recognition, as it provides greater transparency of study programmes and student achievement. ECTS in no way regulates the content, structure and/or equivalence of study programmes.

Regarding each major the Higher Education Act prescribes which professional fields define a certain training program. It contains the proportion of the subject groups: natural sciences, economics and humanities, subject-related subjects and differentiated field-specific subjects.

For the Civil Engineering BSc program the following professional fields define the training:

- natural sciences [mathematics (at least 12 credits), physics, mechanics, chemistry] 40-60 credits;
- economics and humanities (economics, management and business economics, state administration and law) 15-25 credits;
- civil engineering compulsory subjects (materials science, civil engineering draw, geodesy, geoinformatics, geotechnics, building constructions, civil engineering, traffic technology and water engineering, urban and environmental engineering) 80-120 credits.

Special knowledge can be acquired on the bases of the eligible specializations that are offered on demand of the civil engineering field. Within the programme 55-85 credits must be completed on the specializations offered by the higher education institution.

Minimum of credit points assigned to optional subjects: 12

Credit points assigned to thesis: 15

Credits total: 240

During the program students have to complete a total amount of 240 credit points. It means approximately 30 credits pro semester. The curriculum contains the list of subjects (with credit points) and the recommended order of completing subjects which takes into account the

prerequisite(s) of each subject. You can find the recommended list of subjects/semesters in chapter “Guideline”.

### Guideline (Lisf of Subjects/Semesters)

The total number of credit points (240) of the training program can be obtained by completing the subjects of the curriculum. There is a certain degree of freedom in the order students can complete the subjects. However, it is recommended that the suggested order be followed because some subjects can only be taken after the completion of the prerequisite subject(s), and/or can be the prerequisites for other subjects.

The list of subjects you have to complete in the semesters according to the model curriculum of Civil Engineering BSc programme Structural Engineering Specialization:

1 <sup>st</sup> semester	2 <sup>nd</sup> semester
Mathematics I	Mathematics II
Descriptive Geometry	Statics
Informatics for Civil Engineers	Economics
Civil Engineering Orientation	Introduction to Building Construction
Civil Engineering Draw	Geoinformatics I
3 <sup>rd</sup> semester	4 <sup>th</sup> semester
Strength of Materials	Dynamics
Civil Engineering CAD I	Hydraulics & Hydrology I
Geoinformatics II	Geotechnics I
Construction Materials	Planning & Design of Transport Facilities
Theory of Transportation & Basics in Urban Planning	Theory of Design & Approximate Calculations
5 <sup>th</sup> semester	6 <sup>th</sup> semester
Theory of Girders	Construction Management
Introduction to Water Engineering	Geotechnics III
Geotechnics II	Reinforced Concrete Structures
Steel Structures	Building Design
Building Construction	Steel Structures for Buildings

7 <sup>th</sup> semester	8 <sup>th</sup> semester
Reinforced Concrete Structures for Buildings	Management & Business Economics
Timber & Masonry Structures	State Administration, Law & Estate Registering
FEM Modelling	Structural Engineering Compulsory Exam
Structural Design Project	Diploma Project
Bridges & Civil Engineering Structures	

About the prerequisites of each subject please read the chapter “Course Descriptions”!

### Work and Fire Safety Course

According to the Rules and Regulations of University of Debrecen a student has to complete the online course for work and fire safety. Registration for the course and completion are necessary for graduation.

Registration in the Neptun system by the subject: MUNKAVEDELEM

Students have to read an online material until the end to get the signature on Neptun for the completion of the course. The link of the online course is available on webpage of the Faculty.

### Internship

Students majoring in the Civil Engineering BSc have to carry out a 6 weeks internship involved in the model curriculum. The internship course must be signed up for previously via the NEPTUN study registration system in the spring semester (4<sup>th</sup> semester). Its execution is the criteria requirement of getting the pre-degree certificate (absolutorium).

#### *Objective of the internship, competences*

Students get acquainted with professional work in conformity with their major at the company or institution and join in the daily working process. They have to resolve tasks independently assigned by their supervisor and gain experiences may be utilized later in the labour market. During the internship common and professional competences may be acquired. Common competences: precise working on schedule either individually or in team, talk shop applying

correct technical terms. Professional competences: applying the professional skill gained during the training and acquiring new knowledge.

#### *Places suitable for internship*

All the organizations, institutions and companies in Hungary or abroad, provide students with the opportunity to acquire proficiency in accordance with their specialization in the field of operation, repairing technology, installation, management and development of different machines and vehicles, may be a suitable place.

All the necessary formal documents can be downloaded from the website of the Faculty of Engineering. [www.eng.unideb.hu/en](http://www.eng.unideb.hu/en) (Current Students/Study Programs in English /Civil Engineering BSc/Internship)

### Physical Education

According to the Rules and Regulations of University of Debrecen a student has to complete Physical Education courses at least in two semesters during his/her Bachelor training. Our University offers a wide range of facilities to complete them. Further information is available from the Sport Centre of the University, its website: <http://sportsci.unideb.hu>.

### Optional courses

According to the Rules and Regulations of University of Debrecen a student has to complete optional (elective) courses during his/her Bachelor or Master training. These optional courses are opened by the Departments at the Faculty of Engineering at the beginning of the actual semester. A student can also select optional courses from other faculties of University of Debrecen to complete but these courses are accepted with less credits than they have originally. During your training you can complete optional subjects in any semester. There is no maximum limit of credits gained on optional courses but please note that courses completed on Erasmus scholarship often can be transferred as optional subjects into your curriculum. In the Civil Engineering BSc programme you have to gain at least 12 credits with completing optional subjects.

### Pre-degree Certification

A pre-degree certificate is issued by the Faculty after completion of the bachelor (BSc) program. The pre-degree certificate can be issued if the student has successfully completed the study and exam requirements as set out in the curriculum, the requirements relating to

Physical Education as set out in Section 10 in Rules and Regulations, internship (mandatory) – with the exception of preparing thesis – and gained the necessary credit points (120). The pre-degree certificate verifies (without any mention of assessment or grades) that the student has fulfilled all the necessary study and exam requirements defined in the curriculum and the requirements for Physical Education. Students who obtained the pre-degree certificate can submit the thesis and take the final exam.

### Diploma Project (Thesis)

A Thesis is a creative, professional task (in the field of science, engineering, design, implementation, research, development or research development) on the basis of a specialization made in written form too. Its solution is based on the student's professional studies, the study of domestic and international and the control of his/her supervisor and referee. Making and defending his/her thesis success a graduand on civil engineering bachelor of sciences program certifies that he/she is capable to apply his/her acquired knowledge in practice to summarize the work approved and the results in an expert way, to solve problems creatively in his/her topic, to provide independent expert work.

A graduand on bachelor program has to make a thesis as a prerequisite of taking a final exam. The requirements of the program includes the requirements on the content of a thesis, the general aspects of evaluation and the number of credits attributed to a thesis. The number of credits attributed to a thesis is 15 in the civil engineering bachelor program.

Thesis topics announcement must be issued by the departments till the end of the 4th week of the final semester. A student can also offer a thesis topic of which adoption the head of the competent department decides. The requirements of adopting an essay written on Scientific Students' Associations (SSA essay) to a thesis is controlled by the Faculty that is based on the fact that an SSA essay has to meet the all the formal and content requirements of a thesis and the evaluation committee of the internal conference suggest its development into a thesis.

The formal requirements of a thesis is decided by the Department of Civil Engineering and they are delivered at the same time with the thesis topic announcement.

Thesis making is controlled by a full-time instructor as a supervisor appointed by the department and an external person as a referee appointed by an industrial partner. The circumstances and partial deadlines decided by the department must be complied.

The faculty academic calendar (issued by the Vice-Rector for Education) sets the thesis submission deadline, for want of this the deadline is 12 noon the 14th day before the first day of the final exam. A thesis is evaluated by the supervisor and the referee (internal and external). The Head of Department of Civil Engineering makes suggestion on its qualification on the bases of the reviews to the Final Examination Board. If the referee or the supervisor and the Department may evaluate the thesis congruently with a fail mark by the head of department, the student is not allowed to take the final exam and is supposed to modify his/her thesis or prepare a new one. A student must be informed about it. Conditions on resubmitting the thesis are defined by the program coordinator.

## State Exam

After the subject check list is approved a student finishes his studies with taking the state exam of Civil Engineering BSc. This state exam is to check and assess knowledge he acquired during his training and he has to prove that he is able to apply it. The requirements of the state exam are determined in the requirements of Civil Engineering BSc training. A state exam is allowed to take in the exam periods. A state exam can be taken before the examination board. The State Exam Board consists of external (industrial or performing the profession) and internal members. If a student does not complete his state exam till the termination of his student status he can pass it any time in a state exam period after the termination according to the operative requirements and rules on the state exam.

In the major of Civil Engineering BSc the state exam means the defense of the thesis in 15-minute presentation that is followed by a 10-minute debate.

### *Evaluation of the state exam*

The oral exam is evaluated according to a five-scale grading system then the final grade of the state exam is decided by voting in a closed consultation. In case of vote equality the Board Chairman's vote is decisive. The result of the state exam is announced by the Board Chairman. A report is drawn up about the state exam. The partial results and the qualification of the degree must be registered in the lecture book too.

### *Repeating a failed State Exam*

If any part of the state exam is failed it can be repeated according to the rules and regulations. A state exam can be retaken in the forthcoming state exam period. If the Board qualified the Thesis unsatisfactory a student cannot take the state exam and he has to make a new thesis. A repeated state exam can be take twice on each subject.

### *The State Board*

The Chairman of the State Board is adjured from the external and internal experts in the field by the Dean with the support of the Faculty council. According to the tradition of the Faculty a vice chairman is appointed too in case he is unable to be present. A State Exam Board is formed by at least one external (industrial or profession performing) and two internal members (with a Ph.D. degree). The charge of the Board lasts for one year. The sequence of the candidates is put out by the Registry Office at the Faculty.

## COURSE DESCRIPTIONS FOR CIVIL ENGINEERING BSC

The order of subject follows the subject list in the model curriculum.

Subject group “Basic Natural Sciences”

### Mathematics I

Code: MK3MAT1A8RS17-EN

ECTS Credit Points: 8

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 1<sup>st</sup> semester

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+4

#### Topics:

The basic notions of linear algebra, differentiation and integration for real functions; some applications in physics.

#### Literature:

*Compulsory:*

- Thomas’ Calculus, Addison Wesley (11th edition, 2005), ISBN: 0-321-24335-8
- S. Minton, Calculus Concept and Connections, McGraw Hill (2006), ISBN 0-07111200-6

#### Schedule

##### 1<sup>st</sup> week Registration week

##### 2<sup>nd</sup> week:

##### Lecture: *Real numbers*

Axiom system. Boundary, inf, sup, min, max. Dedekind-complete, real line. Distance, neighbourhood, interior point, accumulation point. Intervals. The sets  $\mathbb{R}$ ,  $\mathbb{R}^2$ ,  $\mathbb{R}^3$  and their geometric interpretations. Natural numbers, integer numbers, rational numbers. *Coordinate systems* Polar coordinate system. Spherical- and Cylindrical coordinate systems.

##### 3<sup>rd</sup> week:

**Lecture:** *Sequences of real numbers and their limit.* The notion of real sequences. Limits and operations. Some important sequences and their properties. Monotone and bounded sequences.

**Practice:** *Vector geometry, vector algebra.* The algebra of vectors in 2 and 3 dimensions: operations, coordinate systems. The algebraic definition of the cross product. Geometric interpretations of

**Practice:** Operations of sets, Boole algebra. Logic values, logic operations, logic functions. Cartesian product, 2-tuple, n-tuple. Cardinality. Illustrations of sets on the plane and in the space.

**4<sup>th</sup> week:**

**Lecture:** *Series of real and complex numbers* partial sums and convergence. Absolute convergence Geometric series, criteria of convergence. (Comparison test, ratio test, root test).

**Practice:** Applications: Mechanical work, moment of a force with respect to a point, moment of a force with respect to an axis.

**6<sup>th</sup> week:**

**Lecture:** *Approximations of real functions.* Lagrange interpolation. Linear regression.

**Practice:** *The set of the complex numbers.* Complex plane, rectangular form, trigonometric form, exponential form, operations.

Application: complex impedance

**8<sup>th</sup> week: 1<sup>st</sup> drawing week Test 1**

**9<sup>th</sup> week:**

**Lecture:** *Matrices.* The arithmetic of matrices, determinants and their properties: operations, the notions of symmetrical matrix, skew-symmetrical matrix, determinant, the inverse matrix.

**Practice:** *Matrices.* Operations, determinants and inverses with adjoint matrices

**11<sup>th</sup> week:**

**Lecture:** *Systems of linear equations:* Gauss elimination (addition method) and Cramer's rule. Applications: Calculations for

the scalar product and the cross product. The mixed product.

**5<sup>th</sup> week:**

**Lecture:** *Series of real functions.* The notion of series of real functions, the convergence domain, the radius of the convergence. Power series. Power series of some elementary functions.

**Practice:** *Vector geometry, vector algebra.* Unit vector in the direction of a vector, projections. Geometric applications: lines and planes in the space. The area of a triangle, the volume of a tetrahedron. The distance between a point and a line, or between a point and a plane.

**7<sup>th</sup> week:**

**Lecture:** Summary, sample test

**Practice:** *Sequences of real numbers.* Limits and operations. Monotone and bounded sequences, convergence and relations among them.

**10<sup>th</sup> week:**

**Lecture:** *Vector spaces.* The notion of linear (or vector) space, linear combinations of vectors, linearly dependent and independent systems, basis, dimension, coordinates. Ranks of vector systems, ranks of matrices

**Practice:** *Vector spaces.* Linearly independent and dependent systems, bases. Ranks of vector systems, ranks of matrices

**12<sup>th</sup> week:**

**Lecture:** *Systems of linear equations:* by the inverse of the coefficient matrix

direct current using Kirchoff's current and voltage laws.

**Practice:** *Systems of linear equations:* Gauss elimination (addition method) and Cramer's rule.

**13<sup>th</sup> week:**

**Lecture:** *Linear functions.* The notion of the linear function, the matrices of linear functions. Eigenvalues, eigenvectors.

**Practice:** *Linear functions.* Determinations of matrices of linear transformations. Determinations of eigenvalues, eigenvectors.

**Practice:** *Systems of linear equations:* by the inverse of the coefficient matrix

**14<sup>th</sup> week:**

**Lecture:** *Linear functions.* Bases transformations

**Practice:** *Linear functions.* Bases transformations

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week Test**

**Requirements**

**A, for a signature:**

Participation at practice, according to Rules and Regulations of University of Debrecen. The correct solution of homework and submission before deadline. Solving assorted tasks.

**B, for a grade:**

All the tests must be written during the semester. Evaluation is according to the Rules and Regulations of University of Debrecen.

**Mathematics II**

Code: MK3MAT2A6RS17-EN

ECTS Credit Points: 6

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 1<sup>st</sup> semester

Its prerequisite(s): Mathematics I

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 2+4

**Topics:**

Differentiation and integration of multivariable and vector-valued functions, differential equations.

**Literature:**

*Compulsory:*

- Thomas' Calculus, Addison Wesley (11th edition, 2005), ISBN: 0-321-24335-8
- S. Minton, Calculus Concept and Connections, McGraw Hill (2006), ISBN 0-07111200-6
- M. D. Greenberg, Fundamentals of engineering analysis, Cambridge University Press, ISBN 978-0-521-80526-1

**Schedule**

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week:</b> <b>Lecture:</b> Metric, topology, sequences in $\mathbb{R}^n$ . Linear functions. <b>Practice:</b> Limits of vectorsequences. Limits and continuity of multivariable functions. Linear functions. Notions of differential equations, classification of differential equations, initial value problem.	<b>3<sup>rd</sup> week:</b> <b>Lecture:</b> Parametric curves I. Notions of differentiation, linear approximation. Frenet-Serret frame. Some examples in physics <b>Practice:</b> Differentiation, linear approximation, tangent line. Applications: velocity, acceleration. Problems leading to differential equations. (Newton's second law, RLC, examples in economics).
<b>4<sup>th</sup> week:</b> <b>Lecture:</b> Parametric curves II. Curvature, torsion. Evolute, evolvent, conic sections. <b>Practice:</b> Curvature, torsion. Determinations of conic sections in parametric form. Differential equations which can be integrated on direct way. Separable differential equations.	<b>5<sup>th</sup> week:</b> <b>Lecture:</b> Differentiable functions of type $\mathbb{R}^n \rightarrow \mathbb{R}^m$ . <b>Practice:</b> Derivatives of functions of type $\mathbb{R}^n \rightarrow \mathbb{R}^m$ . First order linear differential equations (homogeneous and inhomogeneous, method of variation).
<b>6<sup>th</sup> week:</b> <b>Lecture:</b> Parametric surfaces. Tangent plane, linear approximation. Surfaces of revolution, ruled surfaces. <b>Practice:</b> Surfaces of revolution: ellipsoid and paraboloid in parametric form. Derivatives of functions of type $\mathbb{R}^2 \rightarrow \mathbb{R}^3$ . The equation of the tangent plane. Determination of solutions of inhomogeneous first order linear differential equations	<b>7<sup>th</sup> week:</b> <b>Lecture:</b> Scalar field, gradient. Young's theorem. Directional derivative. <b>Practice:</b> The domains of functions of type $\mathbb{R}^2 \rightarrow \mathbb{R}$ . Directional derivative and gradient. Higher order linear differential equations, Wronski determinant.
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week Test 1,2</b>	

**9<sup>th</sup> week:****Lecture:** Local and global extrema.**Practice:** Local extremas of functions of type.

$$\mathbb{R}^2 \rightarrow \mathbb{R}, \mathbb{R}^3 \rightarrow \mathbb{R}$$

**11<sup>th</sup> week:****Lecture:** The notion of double and triple integrals on 2 and 3 dimensional intervals. The extensions of the integrals.**Practice:** Vector fields. Derivatives. Divergence and curl. Potential function. Method of undetermined coefficients.**13<sup>th</sup> week:****Lecture:** The arc length of curves, surface area. Line and surface integrals. The theorems of Gauss and Stokes, Green's formulae. Applications in physics.**Practice:** Integrals over general regions. Applications: second moment of area, mass, center of gravity. The theorems of Gauss and Stokes, Green's formulae. Applications in physics. The Laplace transform and its applications.**10<sup>th</sup> week:****Lecture:** Vector fields. Derivatives. Divergence and curl. Potential function.**Practice:** Determination of global extremas on boundary closed sets. Solution of linear homogeneous differential equations of order two having constant coefficients.**12<sup>th</sup> week:****Lecture:** Integrals over general regions. *Applications: second moment of area, mass, center of gravity***Practice:** Double and triple integrals on 2 and 3 dimensional intervals. Special second order differential equations.**14<sup>th</sup> week:****Lecture:** Mahtematical softwares**Practice:** The arc length of curves, surface area. Line and surface integrals. Slope fields, numerical methods. (Euler, Runge-Kutta).**15<sup>th</sup> week: 2<sup>nd</sup> drawing week Test 3, 4****Requirements****A, for a signature:**

Participation at practice, according to Rules and Regulations of University of Debrecen. The correct solution of homework and submission before deadline. Solving assorted tasks.

**B, for a grade:**

All the tests must be written during the semester. Evaluation is according to the Rules and Regulations of University of Debrecen.

## Descriptive Geometry

Code: MK3MAT3A4SX17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 1<sup>st</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

Monge's method of projecting. Intersections. Determining distances and angles of the objects. Methods of replacing image-planes.

### Literature:

*Compulsory:*

- Church, A. E.: Elements of Descriptive Geometry, American Book Company, University of Michigan
- Ledneczky, P.: Descriptive Geometry I., BUTE
- Pare, E. G.,- Loving, R. O. - Hill, I. L. - Pare, R. C.: Descriptive Geometry, Amazon

### Schedule

#### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Practice:** Axonometry, perspective;  
Introduction to multiview projection

#### 4<sup>th</sup> week:

**Practice: Points and lines in the plane**

Line in a plane, point in a plane, First mainline and second mainline in a plane, Point in a first/second projecting plane

#### 6<sup>th</sup> week:

**Practice: Intersection of two planes**

#### 3<sup>rd</sup> week:

**Practice: Introduction to the Monge's method of projecting**

Projection of the space-elements (points, lines, segments, planes), Relative position of two straight lines, Special positions of a straight line to image planes, Special positions of the planes to the image planes

#### 5<sup>th</sup> week:

**Practice: Intersection of a line with the plane**

Intersection of a line with the projecting plane, Intersection of a line with the plane (in general position). Visibility

#### 7<sup>th</sup> week:

**Practice: Method of replacing image-planes**  
(transformation of views)

The intersection line of projecting planes,  
The intersection line of planes, if one of  
them is in projecting position, Intersection  
line of two planes

Introduction of new image planes, the  
method of the replacing of an image plane  
with a new plane. Rotation of the plane

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Practice: Metric tasks I. Determining  
distances and angles of the objects**

Distance between two points. Length of the  
line-segment.

Distance from a point to a plane. Distance  
from a point to a line.

Angle of inclination of a line to the image-  
planes. Angle formed by two planes.

Perpendicularity

**11<sup>th</sup> week:**

**Practice:** Representation of circle

**13<sup>th</sup> week:**

**Practice: Intersection of two polyhedrons**

Intersection of prisms and pyramids

**10<sup>th</sup> week:**

**Practice: Metric tasks II. Determining  
distances and angles of the objects**

Distance between two parallel lines.  
Distance between two skew lines. Distance  
between two parallel planes. Angle formed  
by two lines.

**12<sup>th</sup> week:**

**Practice: Intersection of the polyhedrons  
with lines and planes**

Prisms and pyramids

**14<sup>th</sup> week:**

**Practice: Curved surfaces** (Cylinders, Cones,  
Spheres)

Intersection of curved surfaces with planes.  
Development of a curved surfaces and  
intersections, Kochanski's Approximation.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

**Requirements**

**A, for a signature:**

Participation at practice classes is compulsory. Students must attend practice classes and may not miss more than three of them during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at practice classes will be recorded by the instructor. Being late is equivalent with an absence. In case of further absences, a medical certification needs to be presented.

**B, for a grade:**

Active participation is evaluated by the teacher in every class. If student's behavior or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as absence because of the lack of active participation in class. Students must write tests during the semester.

## Informatics for Civil Engineers

Code: MK3INF1A4SX17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 1<sup>st</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

The subject consists of 4 parts: spreadsheet, database management, design and programming. This informatics knowledge is useful for students during the practice of their profession.

Excel and Access are two applications to deal with tabular data efficiently and conveniently.

Excel has the basic features to organize data manipulation allowing the user to employ a wide variety of numerical methods. Access is used in storing information that can be accessed by a lot of people.

AutoCAD is a computer-aided design (CAD) and drafting software application.

LabVIEW is an interactive, graphical programming language that is ideal for engineers. It is widely used for data acquisition, instrument control and industrial automation.

### Literature:

- Microsoft OFFICE 2010 HOME & STUDENT V2010
- Elliot Gindis, AutoCAD, 2017, Academics Press, 2017
- Robert H Bishop, Learning with LabVIEW, Pearson, 2015

### Schedule

1<sup>st</sup> modul (week 1-8): EXCEL and ACCESS

2<sup>nd</sup> modul (week 9-15): AUTOCAD and LABVIEW

#### 1<sup>st</sup> week Registration week

##### 2<sup>nd</sup> week:

**Practice:** Introducing Excel. User interface of the software. Entering and editing Data. Types of Data. Fill a Range with Series. Formatting and editing Worksheet. Font type and size. Align Text. Number Format. Column Width, Row Height. Borders. Wrap Text. Build an AutoSum Formula. Basic Functions

##### 4<sup>th</sup> week:

##### 3<sup>rd</sup> week:

**Practice:** Creating Charts. Chart types. Chart Elements. Format and customize Excel Charts. Building Formulas. Type of Functions. Move or copy a Formula. Reference another Range in a Formula. Naming groups of data

##### 5<sup>th</sup> week:

**Practice:** Analyzing data. Reordering and summarizing data: Sort a Range. Filter a Range. Summarize Data with Subtotals. Practice of spreadsheet learning.

**6<sup>th</sup> week:**

**Practice:** Format. Input masks. Fast Finding, Filtering, and Sorting Data. Queries (Select, Crosstab). Calculated fields. Summarizing Data. Queries (Make table Queries, Append Queries, Update Queries, Delete Queries)

**8<sup>th</sup> week: 1<sup>st</sup> drawing week, Mid-term exam**

**9<sup>th</sup> week:**

**Practice:** Introducing AutoCAD. Classic workspace. Menu Bar. Toolbars. Command Windows. Setting Up a Drawing. Drawing Units, Drawing Size. Status bar. Grid and Snap. Drawing Commands. (Line, Polyline, Polygon, Rectangle, Arc, Circle, etc.) Object Snap.

**11<sup>th</sup> week:**

**Practice:** Editing objects. (Move, copy, mirror, offset, array, rotate, scale, break, extend, chamfer, fillet, etc.) Using Layers. Blocks. Practice the learned material.

**13<sup>th</sup> week:**

**Practice:** Data Flows model. Troubleshooting and debugging. Decision making: Using Select. Using Case Structure. Loops: While loop. For Loop. Iterative data transfer: Use Shift register. Timing.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week, mid-term exam**

**Practice:** Database basic. Elements of relational databases: tables, records, fields, keys, primary keys, indexes. Relationship between tables, relationship types. User interface of the software. Create a new database. Create and import tables. Data types. Create relation between tables. Referential Integrity. Insert, delete, update records, fields.

**7<sup>th</sup> week:**

**Practice:** Create forms using the Form wizard. Create Reports using the Report wizard. Formatting a Report. Create Switchboard. Model and create a new database. Practice the learned material.

**10<sup>th</sup> week:**

**Practice:** Cartesian Coordinates. Polar Coordinate System. Absolut and Relative Coordinates. Dimensioning a Drawing. Change View. Hatch. Text in a Drawing.

**12<sup>th</sup> week:**

**Practice:** Introducing LabView. Graphical programming. Virtual instruments. User interface of the software.  
Main components: Front Panel, Block Diagram, Icon and Connector pane. Data types. Elements of Block Diagram: Nodes, Functions, subVIs.

**14<sup>th</sup> week:**

**Practice:** Modularity. Functions and SubVIs. Three types of Functions: ExpressVIs, Standard VIs, Functions. Creating SubVIs. File I/O. Graph Indicators. Create codes. Practice the learned material.

**Requirements**

**A, for signature:**

Participation at practice is compulsory. Students have to attend the practices and have not to miss more than three practices during the semester. In case a student misses more than three, the subject will not be signed and the student must repeat the course. The attendance on practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented.

**B, for grade:**

Everybody has to take two mid-term exams during the semester at the end of the modules. The minimum requirement for the mid-term exams is 50%. Based on the score of the mid-term exams, the grade for each exam is given according to the following table:

Score	Grade
0-49 %	fail (1)
50-62 %	pass (2)
63-75 %	satisfactory (3)
76-88 %	good (4)
89-100 %	excellent (5)

**Both modules must be obtained at least pass (2 grade).** Students can make up or improve their grades at the last week of the semester. At the end of the semester everybody will get a final grade on the basis of the average of his/her all grades: If the average is for example (3.5) then the lecturer decides if it is (3) or (4).

## Civil Engineering Orientation

Code: MK3MEC1S8SX17-EN

ECTS Credit Points: 8

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 1<sup>st</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

**Topics:**

The lectures are focused on the basic of statics and fluid mechanics, hydraulics. Basic mechanical concepts: Vectors, Force, moment of force, Varignon's theorem, Equilibrium equations. Balancing the plane system with 2 or 3 forces. Balancing supports. Basic concepts and properties of fluids: fluids at rest and in motion; Dimension and Unit; Fluid as Continuum; Pressure; Density; Viscosity; Thermal Conductivity; Coefficient of compressibility/Bulk modulus; Surface Tension; State Relations for Gases and Liquids; Classifications of Fluid Flows; Fluid statics- Pressure distribution in atmospheres and oceans; Design of manometer pressure instruments; Forces on submerged flat and curved surfaces; Buoyancy on a submerged body;

Behaviour of floating bodies. Fluids in the environment. Scope of environmental fluid mechanics. Exchange between fluid parcels of different densities and at different heights. Turbulence. Environmental fluid mechanics problems for the 21st Century. Some connections between fluid mechanics and the solving of industrial and environmental fluid-flow problems.

**Literature:**

*Compulsory:*

- EN 1990:2002/A1:2005 Eurocode - Basis of structural design.
- Munson, Bruce R., Young, Donald F., Okiishi, Theodore H., Huebsch, Wade W. Fundamentals of Fluid Mechanics, Sixth Edition. John Wiley & Sons, Inc. (2009). ISBN 978-0470-26284-9
- Marriott, M.: Nalluri & Featherstone's Civil Engineering Hydraulics: Essential Theory with Worked Examples, 6th Edition, Wiley Blackwell (2016), ISBN: 978-1-118-91563-9

*Recommended:*

- fib Bulletin 51 Structural Concrete – Textbook on behavior, design and performance – Second Edition – Volume 1., Federation International du Béton – International Federation for Structural
- Jack B. Evett Cheng Liu: 2500 Solved problems in Fluid Mechanics & Hydraulics, First Edition, McGraw Hill (1989), ISBN 0-07-0199783-0

**Schedule**

<b>1<sup>st</sup> week Registration week</b>	
<p><b>2<sup>nd</sup> week:</b></p> <p><b>Lecture and Practice:</b> Some Characteristics of Fluids. Dimensions, Dimensional Homogeneity, and Units. Fluid as Continuum; Pressure; Density; Viscosity; Thermal Conductivity; Coefficient of compressibility/Bulk modulus; Surface Tension.</p> <p>Calculation of Specific Weight, Specific Gravity, Density problems.</p> <p><b>4<sup>th</sup> week:</b></p> <p><b>Lecture and Practice:</b> Forces on submerged flat and curved surfaces; Hydrostatic force on a plane surface; Pressure distribution and resultant force in an open tank: (a) bottom portion of the tank; (b) side of the tank. Area and moment of inertia of few common shapes.</p>	<p><b>3<sup>rd</sup> week:</b></p> <p><b>Lecture and Practice:</b> State Relations for Gases and Liquids; Classifications of Fluid Flows; Fluid statics- Pressure distribution in atmospheres and oceans; Design of manometer pressure instruments.</p> <p>Fluid statics problems, U-Tube manometer problems.</p> <p><b>5<sup>th</sup> week:</b></p> <p><b>Lecture and Practice:</b> Buoyancy on a submerged body; Behaviour of floating bodies. <i>Archimedes' principle.</i></p> <p>Calculation different buoyancy problems.</p>

*Hydrostatic Force on a submerged surface.*  
Hydrostatic force on the side of a dam.  
Lateral force of water on the walls of a tank.

**6<sup>th</sup> week:**

**Lecture and Practice:** Fluids in the environment. Scope of environmental fluid mechanics. Exchange between fluid parcels of different densities and at different heights. Turbulence. Environmental fluid mechanics problems for the 21st Century. Some connections between fluid mechanics and the solving of industrial and environmental fluid-flow problems.

Calculation of industrial and environmental fluid-flow problems.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week / 1<sup>st</sup> test**

**9<sup>th</sup> week:**

**Lecture and Practice:** Newton's Laws, Scalars, and Vectors. Vector Language, Intro to Vector Addition. The Triangle Rule and Adding Vectors to find a Resultant.

**11<sup>th</sup> week:**

**Lecture and Practice:** Moment about a point and Specified Axis. Equivalent Systems, System Simplification.

**13<sup>th</sup> week:**

**Lecture and Practice:** Grouping of construction materials. Rheology of materials. Idealisation diagrams.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / 2<sup>nd</sup> test**

**7<sup>th</sup> week:**

Study trip

**10<sup>th</sup> week:**

**Lecture and Practice:** Using Scalar Equations to Solve for 2 Unknowns, Equations and Unknowns, 3D Vectors. Instruction to moments.

**12<sup>th</sup> week:**

**Lecture and Practice:** Equilibrium of Rigid Bodies, 2D Support. Simple 2D Reaction Forces on a Truss Problem

**14<sup>th</sup> week:**

Study trip

## Requirements

Participation at **lectures** is **compulsory**. Students must attend on lectures and may not miss more than three lectures during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at lectures will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring the calculator and the printed materials of the lectures with them to each lecture and practice class. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

Students have to **submit all the two tests** as scheduled minimum at a sufficient level. During the semester there are two tests: the 1<sup>st</sup> test in the 8<sup>th</sup> week and the 2<sup>nd</sup> test in the 15<sup>th</sup> week.

In order to take a **mid-semester grade** – minimum (2) pass grade, – minimum point of test has to be taken (Summa minimum 61 points from 100 points). The minimum and the maximum points related to the tests can be obtained are the follows:

<b>Tests:</b>			
1. Test:	Maximum:	<b>50 points</b>	Minimum: <b>30 points</b>
2. Test:	Maximum:	<b>50 points</b>	Minimum: <b>30 points</b>
<b>Summa points:</b>	Maximum:	<b>100 points</b>	<b>61 points</b>

The course ends with a **mid-semester grade**. Based on the summa points of the tests, the mid-semester grade is defined according to the following calculation:

Score		Grade
0 – 60 points:	fail	(no sign)
61 – 70 points:	pass	(2)
71 – 80 points:	satisfactory	(3)
81 – 90 points:	good	(4)
91 – 100points:	excellent	(5)

## Statics

Code: MK3MEC2S8SX17-EN

ECTS Credit Points: 8

Evaluation: Exam

Year, Semester: 1<sup>th</sup> year, 2<sup>nd</sup> semester

Its prerequisite: Civil Engineering Orientation

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 0+6

## Topics:

Definitions, concurrent forces in a plane, Forces and rigid bodies in plane and in space. Simple structures, Compound structures, Trusses, Distributed forces, Internal forces, Diagrams of internal forces. Force systems in three dimensional space. Structures in three dimensional space. Force influence lines of statically determinate structures.

## Literature:

*Compulsory:*

- Vector Mechanics for Engineers by Ferdinand P. Beer, E. Russell Johnston and Phillip J. Cornwell (2012, Hardcover) ISBN-10: 0077402324 | ISBN-13: 9780077402327

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week</b> <b>Practice:</b> : Introduction, definitions, concurrent forces in a plane	<b>3<sup>rd</sup> week:</b> <b>Practice:</b> Forces in a plane
<b>4<sup>th</sup> week:</b> <b>Practice:</b> Simple structures, statically determinacy	<b>5<sup>th</sup> week:</b> <b>Practice:</b> Compound structures
<b>6<sup>th</sup> week:</b> <b>Practice:</b> Truss analysis I.	<b>7<sup>th</sup> week:</b> <b>Practice:</b> Truss analysis II.
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Practice:</b> Trip	<b>10<sup>th</sup> week:</b> <b>Practice:</b> Distributed forces in a plane <b>Mid-term test</b>
<b>11<sup>th</sup> week:</b> <b>Practice:</b> Internal forces	<b>12<sup>th</sup> week:</b> <b>Practice:</b> Internal force diagrams
<b>13<sup>th</sup> week:</b> <b>Practice:</b> Simple structures in three dimensional space	<b>14<sup>th</sup> week:</b> <b>Practice:</b> Force influence lines of statically determinate structures <b>End-term test</b>
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

## Requirements

### A, for a signature:

Participation at **practice** is compulsory. Students must attend practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator to each practice. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

During the semester there are two tests: the mid-term test in the 10<sup>th</sup> week and the end-term test in the 14<sup>th</sup> week. A student once can retake test in both topics, if it is necessary.

---

**Tests:**Test 1: Maximum: **25 points**Test 2: Maximum: **25 points**Summa: **50 points** Minimum **33 points** **$50 \times 1.5 = 75$  points** **50 points****B, for a grade:**

The course ends in an **examination grade**. Based on the points of the tests and the exam. The sum of points which are given for the two tests is multiplied with 1.5 and added to the points of the exam.

**Exam** Maximum: **25 points** Minimum: **10 points****Summa points** Maximum: **100 points** Minimum: **60 points**

---

The grade is given according to the following table:

Score	Grade
0-59	fail (1)
60-69	pass (2)
70-79	satisfactory (3)
80-89	good (4)
90-100	excellent (5)

**Strength of Materials**

Code: MK3MEC3S8SX17-EN

ECTS Credit Points: 8

Evaluation: Exam

Year, Semester: 2<sup>nd</sup> year, 3<sup>rd</sup> semester

Its prerequisite: MK3MEC2S8SX17EN

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 0+6

**Topics:**

Definitions, attributes of the cross-sectional polygons. Characterization of the state of stress, Characterization of the state of strain. Material laws. Elastic beam model. State variables of a beam element, Equations of the beam element. Simple loading. Combined loading. State of stress, principal stresses. Displacements of the beams. Work theorems. Buckling of solid columns.

**Literature:**

*Compulsory:*

**Requirements**

**A, for a signature:**

Participation at **practice** is compulsory. Students must attend the practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice with

another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator to each practice class. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

During the semester there are two tests: the mid-term test in the 6<sup>th</sup> week and the end-term test in the 14<sup>th</sup> week. A student once can retake test in both topics, if it is necessary.

**Tests:**

1. Test:	Maximum:	<b>25 points</b>
2. Test:	Maximum:	<b>25 points</b>
	Summa: <b>50 points</b>	Minimum: <b>33 points</b>
	<b>50×1.5=75 points</b>	<b>50 points</b>

**B, for a grade:**

The course ends in an **examination grade** based on the points of the tests and the exam. The sum points which are given for the two tests is multiplied with 1.5 and added to the points of the exam.

<b>Exam</b>	Maximum:	<b>25 points</b>	Minimum:	<b>10 points</b>
<b>Summa points</b>	Maximum:	<b>100 points</b>	Minimum:	<b>60 points</b>

A grade is given according to the following table:

Score	Grade
0-59	fail (1)
60-69	pass (2)
70-79	satisfactory (3)
80-89	good (4)
90-100	excellent (5)

**Dynamics**

Code: MK3MEC4S4SX17-EN

ECTS Credit Points: 4

Evaluation: Exam

Year, Semester: 2<sup>nd</sup> year, 4<sup>th</sup> semester

Its prerequisite: Civil Engineering Orientation

Further courses are built on it: No

Number of teaching hours/week (lecture + practice): 0+4

## Topics:

Introduction. Kinematics of particles. Kinematics of rigid bodies. Kinetics of particles. Newton's second law of motion. Application of principle of impulse and principle of work and energy for analysis of motion on a given motion curves. Kinetics of rigid bodies. Problems of impacts. Impact of falling mass and elastic structure (solid body). Free, and forced vibration problems with one degree of freedom. Free and forced vibration problems with more degrees of freedom. Vibration forced by support motion. Vibration from earthquake. Dynamic effects of wind.

## Literature:

### Compulsory:

- BEER F.P., JOHNSTON E.R.: Dynamics. ISBN 0-07-079926-1, McGraw-Hill cop 1988.

### Recommended:

- TIMOSHENKO S.: Vibration problems in engineering. ISBN 0-471-87315-2, Wiley 1974.
- PESTEL E. C., THOMSON W. T.: Dynamics. McGraw-Hill cop 1968.

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week</b> <b>Practice:</b> : Introduction, Kinematics of particles, Moving in 3D	<b>3<sup>rd</sup> week:</b> <b>Practice:</b> Kinematics of rigid bodies Translation, Rotation around fix axis, planar moving
<b>4<sup>th</sup> week:</b> <b>Practice:</b> Kinetics of particles I Newton's second law Theorem of D' Alambert	<b>5<sup>th</sup> week:</b> <b>Practice:</b> Kinetics of particles II Theorem of change of linear momentum Theorem of change of angular momentum
<b>6<sup>th</sup> week:</b> <b>Practice:</b> Kinetics of particles III Work of a force Theorem of change of kinetic energy Force field, Potential energy, Law of conservation of mechanical energy <b>Mid-term test</b>	<b>7<sup>th</sup> week:</b> <b>Practice:</b> Trip.
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Practice:</b> Kinematics of rigid bodies I Second order moment of mass Principles of rigid bodies kinetics	<b>10<sup>th</sup> week:</b> <b>Practice:</b> Kinematics of rigid bodies II Linear momentum of a rigid body Angular momentum of a rigid body

11<sup>th</sup> week:

Practice: Impacts

13<sup>th</sup> week:

Practice: Vibration  
Forced vibration of S-DOF systems

12<sup>th</sup> week:

Practice: Vibration I  
Free vibration of S-DOF systems

14<sup>th</sup> week:

Practice: Vibration III  
Vibration of M-DOF systems

End-term test

15<sup>th</sup> week: 2<sup>nd</sup> drawing week

### Requirements

#### A, for a signature:

Participation at **practice** is compulsory. Students must attend practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator to each practice class. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

During the semester there are two tests: the mid-term test in the 6<sup>th</sup> week and the end-term test in the 14<sup>th</sup> week. A student once can retake the test in both topics, if it is necessary.

---

#### Tests:

Test 1: Maximum: **25 points**

Test 2: Maximum: **25 points**

Summa: **50 points**

Minimum: **33 points**

**$50 \times 1.5 = 75$  points**

**50 points**

#### B, for a grade:

The course ends in an **examination grade** based on the points of the tests and the exam. The sum points which are given for the two tests is multiplied with 1.5 and added to the points of the exam.

**Exam** Maximum: **25 points** Minimum: **10 points**

**Summa points** Maximum: **100 points** Minimum: **60 points**

A grade is given according to the following table:

Score	Grade
0-59	fail (1)
60-69	pass (2)
70-79	satisfactory (3)
80-89	good (4)
90-100	excellent (5)

## Theory of Girders

Code: MK3MEC5S4SS17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 3<sup>th</sup> year, 5<sup>th</sup> semester

Its prerequisite: Strength of Material

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

Introduction. Force and displacement influence lines of statically determinate structures. Maximal internal forces and the diagrams of maximal internal forces. Solution of statically indeterminate plane structures by the force method. Force influence lines of statically indeterminate structures with the force method. Solution of statically indeterminate plane structures by the displacement method. The Cross method. The mechanical displacement method. The General matrix equation of planar rod structures.

### Literature:

*Compulsory:*

- Aslan Kassimali: Structural Analysis (ISBN- 13: 978-1133943891)

*Recommended:*

- Budynas: Advanced Strength and Applied Stress Analysis (ISBN-13: 978-0070089853)
- Popov: Mechanics of materials (ISBN-13: 978-0135713563)

### Schedule

#### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week

**Practice:** Force influence lines of statically determinate structures with the Theorem of virtual displacements

#### 4<sup>th</sup> week:

**Practice:** Maximal internal forces and the diagrams of maximal internal forces

#### 6<sup>th</sup> week:

**Practice:** Force influence lines of statically indeterminate structures with the force

#### 3<sup>rd</sup> week:

**Practice:** Displacement influence lines of statically determinate structures with the Theorem of virtual forces

#### 5<sup>th</sup> week:

**Practice:** Solution of statically indeterminate plane structures by the force method

#### 7<sup>th</sup> week:

**Practice:** Trip.

method

### Mid-term test

#### 8<sup>th</sup> week: 1<sup>st</sup> drawing week

#### 9<sup>th</sup> week:

**Practice:** Solution of statically indeterminate plane structures by the displacement method

#### 11<sup>th</sup> week:

**Practice:** The mechanical displacement method

#### 13<sup>th</sup> week:

**Practice:** Practicing the displacement method and revision

#### 15<sup>th</sup> week: 2<sup>nd</sup> drawing week

#### 10<sup>th</sup> week:

**Practice:** The Cross method

#### 12<sup>th</sup> week:

**Practice:** The General matrix equation of planar rod structures

#### 14<sup>th</sup> week:

**Practice:**

**End-term test**

## Requirements

### A, for a signature:

Participation at **practice** is compulsory. Students must attend the practices and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. Attendance on practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator to each practice class. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

During the semester there are two tests: the mid-term test in the 6<sup>th</sup> week and the end-term test in the 14<sup>th</sup> week. If the score of any test is below 30 from 50 points, a student once can retake the test in both topics.

---

### Tests:

Test 1:	Maximum:	<b>50 points</b>
Test 2:	Maximum:	<b>50 points</b>
	Summa: <b>100 points</b>	Minimum <b>60 points</b>

### B, for a grade:

The mid-semester grade is based on the points of the tests.

A grade is given according to the following (score/grade): 0-59 = fail; 60-69 = pass (2); 70-79 = satisfactory (3); 80-89 = good (4); 90-100 = excellent (5).

## Subject group “Economics and Humanities”

### Economics

Code: MK3GAZ1M4SX17-EN

ECTS Credit Points: 4

Evaluation: exam

Year, Semester: 1<sup>st</sup> year, 2<sup>nd</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 1+3

### Topics:

This course aims to make students familiar with the basic concepts of microeconomic and macroeconomic analysis. In particular, the course will be focused on the analysis of how economic actors, consumers and firms choose between different alternatives. By the end of the course, the student should be able to use the basic tools and models of microeconomics and macroeconomics, and apply them in solving problems. The course focuses on the theory and application of the following: Microeconomic processes, The basics of supply and demand. Market equilibrium. Elasticity of demand (supply). Consumer behaviour - Households' choices (Marginal utility theory). Firm's production (factors), costs of production, profit-maximizing behaviour. Market structures (perfect competition, imperfect competition: monopoly). Profit maximizing under perfect competition, and monopoly. Cost-benefit and Break-even analysis. Measuring macroeconomic output (real vs. nominal Gross Domestic Product, Gross output). Consumption and Investment. Household and firm sector. Investment multiplier. Economic role of government (externalities). Fiscal policy and output determination. The role of money in the economy, the evolution of money, central bank, commercial banking, the supply and the demand for money. Monetary policy. Aggregate demand and supply. Labour market. Unemployment and inflation.

Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week:</b> <b>Lecture: <i>Basic concepts of Economics and Microeconomics</i></b> Introduction to Microeconomics and Macroeconomics, models in Economics. Key analytical tools (Comparative statics, Equilibrium analysis, Constrained optimization). Efficiency and use of resources. <b>Practice:</b> Calculation/team problems: Main economic problems. Case study examination.	<b>3<sup>rd</sup> week:</b> <b>Lecture:</b> The components of the Macroeconomics. The circular flow Diagram. Market sectors – commodity, money and labour market. <b>Practice:</b> Calculation/team problems: Circular flow of income. Case study examination.
<b>4<sup>th</sup> week:</b> <b>Lecture: <i>Measuring Macroeconomic Output</i></b> Circular flow – market sectors. Output and Income. Price level, Consumer price index. Measuring macroeconomic output (Gross Output, Gross Domestic Product, calculating GDP, real versus nominal GDP, the components of the GDP, GDP deflator and Produce price index). <b>Practice:</b> Calculation/team problems: measuring macroeconomic income and output. The difference between nominal and real GDP. GDP deflator and Produce price index.	<b>5<sup>th</sup> week:</b> <b>Lecture: <i>The Keynesian Theory – Aggregate demand</i></b> Consumption function, marginal propensity to consume. Saving function, marginal propensity to saving. Economic role of investment, Mathematical and geometrical derivation of the equilibrium output. Investment multiplier, main influencing factors of investment. Derivation of investment – saving curve. <b>Practice:</b> Calculation/team problems: consumption and saving function, Investment multiplier. Investment-saving function.

**6<sup>th</sup> week:**

**Lecture: *Government in the economy***

Government expenditures and revenues. Types of taxes, disposable income, government budget, determination of equilibrium output, fiscal policy, the government spending multiplier, the tax multiplier. Average tax rate, tax wedge, and marginal tax rate.

**Practice:** Calculation/team problems: The role of the government in the economy. Tax burden and tax multiplier. Market equilibrium analysis.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Lecture: *Production***

Factors of production. Inputs, outputs and production function. Marginal product of labour and average product of labour. Law of diminishing marginal returns to labour (capital).

***Costs of production***

Total, fixed and variable costs, marginal and variable cost. The relationship between marginal and average cost. Total revenue, total profit curves. Calculating problems (types of cost, relationship between cost and profit. opportunity cost).

**Practice:** Calculation/team problems; (average product of labour (capital), marginal product of labour (capital), relationship between marginal product and average product. Marginal cost, total, variable and fixed cost, average costs.

**11<sup>th</sup> week:**

**Lecture: *Perfect and Imperfect competition***

Monopoly (the profit-maximization condition); ***Money market***

**7<sup>th</sup> week:**

**Lecture: *Demand and supply***

Demand curves, Supply curves; Market equilibrium. Calculation problems: equilibrium price and quantity; market demand and individual demand; shifts versus movements along the demand curve (supply curve); shifts versus movements along the supply curve. ***Types of elasticity of demand***

Price elasticity of demand, cross price elasticity of demand, income elasticity of demand. The elasticity of supply. Total revenue and the price elasticity of demand. Increase in total revenue. Taxes and elasticity.

**Practice: Midterm Test I.**

**10<sup>th</sup> week:**

**Lecture: *Condition of profit maximization***

Main condition of profit maximization under competitive market. Main characteristics of the competitive market. Marginal cost, average costs of production, profit-maximizing output, shut down and breakeven point, profit and loss. The competitive firm's supply curve.

**Practice:** Calculation/team problems: marginal average revenue, total revenue, average and marginal profit, profit-maximizing output, marginal cost curve and supply curve. Determination of the shut down and breakeven point.

**12<sup>th</sup> week:**

**Lecture: *Money market***

The demand for money. Supply and demand in the money market. The

The meaning of money, the functions of money, measuring the supply of money. The creation of money, required reserve ratio. The money multiplier. Fisher effect (nominal and real interest rate).

**Practice:** Profit maximization condition (Monopoly), consumer and producer surplus. Equilibrium analysis.

### 13<sup>th</sup> week:

#### **Lecture:** *The labour market*

The demand for labour, the supply of labour. The labour force, working-age population, active and inactive population, labour participation rate. Supply curve and demand curve, equilibrium. Employed population.

**Practice:** Calculation/team problems: Supply of labour function, and demand for labour function, equilibrium analysis.

equilibrium interest rate. Mathematical and geometrical derivation of the LM curve.

**Practice:** Calculation/team problems: The equilibrium output and price-level. Case study analysis.

### 14<sup>th</sup> week:

#### **Lecture:** *Main macroeconomic problems – Unemployment and inflation*

Measurement of Unemployment, the unemployment rate, the employment and activity rate. Types of unemployment (voluntarily and involuntarily unemployment; structural, frictional and cyclical unemployment), Okun law. Inflation; (Price level, inflation rate, definition and measuring of inflation, types and causes of inflation, moderate, galloping and hyperinflation, demand side and supply side inflation, The relationship between unemployment rate and inflation rate – Philips curve).

**Practice:** Case study examination and team problems: Measurement of unemployment. Reasons for inflation, Philips curve.

### 15<sup>th</sup> week: 2<sup>nd</sup> drawing week

## Requirements

### A, for a signature:

Participation at practice classes is compulsory. Students must attend practice classes and may not miss more than three occasions during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't take part in any practice class with another group. Attendance at practice classes will be recorded by the practice leader. Being late is equivalent with an absence. In case of further absences, a medical certification needs to be presented. Missed practice classes must be made up for at a later date, being discussed with the tutor.

During the semester there are two tests: the mid-term test on the 7<sup>th</sup> week and the end-term test on the 15<sup>th</sup> week. Students must sit for the tests.

### B, for a grade (ESE):

The course ends in an **examination**.

The minimum requirement of the mid-term, the end-term test and the teamwork is 50% separately. Based on the score of the tests separately, the grade for the tests and the examination is given according to the following table:

The grade is given according to the following (score/grade): 0-49 % = fail (1); 50-62 % = pass (2); 63-75 % = satisfactory (3); 76-89 % = good (4); 90-100 % = excellent (5).

If the score of any test is below 50%, the student once can take a retake test of the whole semester material.

**An offered grade:** It may be offered for the students if the average of the mid-term test, end-term tests and the teamwork is at least good (4). The offered grade is the average of them.

## Construction Management

Code: MK3MUM1M4SX17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 3<sup>rd</sup> year, 1<sup>st</sup> 2<sup>nd</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

Students learn about the participants of investments in construction, they are bound to their duties. Parts of a construction contract, together with the documents and the role of historical documents. Budget in construction, location, a role, and a part of the methods of calculation. The concept of overhead hourly wage, the price of construction materials and the method of calculation of the cost. After making a plan of complete budget should be sized calculations and shaped plans. Standard time allowance for labelling and defining technological order. Create a budget based on the total of the previous semester band prepared schedule, making machine schedule, preparation of staff schedules. Creating organizational layout in three phases. Substructure work types, structural work and during the final phase of work. Learning about temporary structures, temporary utilities, roads and means of disposal solutions and marking of installed equipment. Efforts should be made for both the installation and closed freely available land to be planned!

### Schedule

1<sup>st</sup> week Registration week

2<sup>nd</sup> week:

**Practice:** Technology, building materials and technology, the foundation, walls and

3<sup>rd</sup> week:

**Practice:** Technology, building systems, partitions, doors, windows, flooring,

columns / pillars, floors, roofs and map overlays, traffic building

**4<sup>th</sup> week:**

**Practice:** ISO Utility Structures: scaffolding, supports. An auxiliary structure: pattern sheets, formwork, trench supports. Size and quantity statement in a tabular form.

**6<sup>th</sup> week:**

**Practice:** The budget includes: item systems, overhead hourly rate, job costs, calculating the cost of materials. Preparation of budget, computerized by TERC Common laboratory work and building visit, concepts, models.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Practice:** Spatial organization: storage of building materials and products. Internal mass transport. Preparation of construction and substructure work. Spatial organization: the auxiliary. Creating spatial organizational plans

**11<sup>th</sup> week:**

**Practice:** The time scheduled basic elements: The mesh design- critical path. A continuous band-like construction management, construction management. Technology-based construction management (business management). The recommended process of planning time. The time scheduled update. Standard data.

**13<sup>th</sup> week:**

**Practice:** Workspace delivery and the receipt of a report in the way of finishing

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

engineering, electrical, mechanical lifts, heating and cooling, finishing work.

**5<sup>th</sup> week:**

**Practice:** Construction: demolition, excavation design, provide support, drainage, foundation, masonry, plastering, concreting, wood structures, steel structures, transportation, lifting

**7<sup>th</sup> week:**

**Practice:** Spatial organization: Site Buildings, structures, roads. Energy and utilities board. Calculation of Working Time Standards Collecting and spending time laboratory work using the TERC

**10<sup>th</sup> week:**

**Practice:** Time management: Concepts. Types of rate plans. Portrayal of the Schedule. Time scheduled basic elements: training processes. Analyses of processes: process of time and labor expenses. The combination of processes (determine relative time positions. Facades and outdoor finishing work +building visit

**12<sup>th</sup> week:**

**Practice:** A project as a process. The task of setting Project participants (Facility Director, preparation, foremen, technicians etc. ..) tasks and roles through practical examples, in addition to types of constructional work, participants, tasks and roles.

**14<sup>th</sup> week:**

**Practice:** Implementation - organizing implementation. Building log and diary survey. Requirements of a building plant room (social spaces, warehouses ...)

## Requirements

### A, for a signature:

Attendance at lectures is recommended, but not compulsory. Participation at practice classes is compulsory. Students must attend the practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice class with another group. Attendance at practice will be recorded by the practice leader. Students have to submit all the drawings (hand prepared schedule, making machine schedule, preparation of staff schedules + organizational layout in three phases) tasks as scheduled minimum at a sufficient level. During the semester there are two tests: the mid-term test in the 8th week and the end-term test in the 15th week.

### B, for a grade:

The course ends in a mid-semester grade (AW5). Based on the average of the marks of the drawings and the average of the test results, the mid-semester grade is calculated as an average of them: - the average grade of the drawing tasks - the average grade of the two tests  
Special conditions for signing and examination: Mid-semester (continuous) accountability  
Creating the task: 1 80 80 points 80 points 50.0% Performance of the task and the conditional-release test must be more than 50% for a mid-year signing,. You need to reach 41 points.

## Management and Business Economics

Code: MK3MEN1M4SX17-EN

ECTS Credit Points: 4

Evaluation: exam

Year, Semester: 4<sup>th</sup> year, 2<sup>nd</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+0

### Topics:

The aim of the course is to provide students with a comprehensive knowledge of organization's operation and the role of leadership and organization. Understand the different forms of business, the stakeholders of a company, the concept of investments and economic analysis. Students should be able to analyse corporate costs and expenses, and make calculations. Acquire basic knowledge of human and wage management. The acquisition of basic relationships of corporate strategy and marketing.

### Literature:

*Compulsory:*

- A. Griffiths, S. Wall: Economics for Business and Management, Pearson, 2011

- James C. Collins: Good to Great: Why Some Companies Make the Leap...and Others Don't, Harper Business, 2001
- P. Hawken: Growing a Business, Simon and Shuster, 1988

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week:</b> <b>Lecture:</b> The company's core resources and processes	<b>3<sup>rd</sup> week:</b> <b>Lecture:</b> The company as an organization
<b>4<sup>th</sup> week:</b> <b>Lecture:</b> Management functions, manager roles, tasks	<b>5<sup>th</sup> week:</b> <b>Lecture:</b> Organization theory
<b>6<sup>th</sup> week:</b> <b>Lecture:</b> Theoretical basics of management methodology	<b>7<sup>th</sup> week:</b> <b>Lecture:</b> Flow of information in the organisation
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Lecture:</b> Entrepreneur concept, stakeholders. Forms of companies	<b>10<sup>th</sup> week:</b> <b>Lecture:</b> Corporate strategy, Business Plan
<b>11<sup>th</sup> week:</b> <b>Lecture:</b> Concept of investments, economical analysis	<b>12<sup>th</sup> week:</b> <b>Lecture:</b> Definition of costs, coverage calculation
<b>13<sup>th</sup> week:</b> <b>Lecture:</b> Human resource management, waging and motivation	<b>14<sup>th</sup> week:</b> <b>Lecture:</b> Corporate marketing
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

## Requirements

### A, for a signature:

Participation at lectures is compulsory. Students must attend lectures and may not miss more than three of them during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at lectures will be recorded by the lecturer. Being late is equivalent with an absence. In case of further absences, a medical certification needs to be presented. Missed lectures must be made up for at a later date, being discussed with the tutor.

Students have to write two mid-term tests during the semester. The first (40 points max) in the 8<sup>th</sup>, the second (40 points max) in the 14<sup>th</sup> week. At the end of the semester everybody will get a seminar grade on the basis of the following: (score/grade): 0-39 = fail; 40-50 = pass (2); 51-60 = satisfactory (3); 61-70 = good (4); 71-80 = excellent (5).

If somebody fails then he/she has to write both tests in the 1<sup>st</sup> week of the exam period again. If the result is 40 points (50%) or better, then he/she can take an exam. If somebody has to repeat his/her mid-term tests then his/her seminar grade can't be better than (2).

There will be homework week by week. Only students who have handed in all their homework at the time of the mid-term test will be allowed to write it. The problems have to be solved in the mid-term tests will be selected from the homework assignments.

### **B, for a grade:**

Everybody will get an exam grade for their exam. The final grade will be the average of the seminar and the exam grade. If it is for example (3.5) then the lecturer decides if it is (3) or (4).

## **State Administration, Low & Estate Registering**

Code: MK3GAZ2M4SX17-EN

ECTS Credit Points: 4

Evaluation: exam

Year, Semester: 4<sup>th</sup> year, 2<sup>nd</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+0

### **Topics:**

This subject helps the students to understand the basics of a legal relationships. The subject also covers the organization of the, powers, duties, and functions of public authorities of all kinds engaged in administration; their relations with one another and with citizens and nongovernmental bodies; legal methods of controlling public administration; and the rights and liabilities of officials. The subject also helps the students understand the organization of a national legislature, the structure of the courts, the characteristics of a cabinet, and the role of the head of state, and the government. It introduces sources of law and legal method, business organizations and legal relationships, contracts including the supply of goods and services. Since Hungary is a part of the European Union the subjects also covers the basic knowledge of European Union Law.

### **Literature:**

#### *Compulsory:*

- The basic Law of Hungary, Lóránt Schink, Balázs Schanda, András Zs. Varga, Clarus Press, 978-1-905536-45-0

## Schedule

### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week

**Lecture:** The introduction of Hungarian legal system, the basics, the Constitution, and the sources of law in Hungary and in the European Union.

#### 4<sup>th</sup> week:

**Lecture:** The role of the local governments in Hungary, and the institutes of the local administration.

#### 6<sup>th</sup> week:

**Lecture:** The basic legal phrases of the civil law in Hungary and in the law of the European Union, the sources of law, the legal relationships, the law system.

### 8<sup>th</sup> week: 1<sup>st</sup> drawing week

#### 9<sup>th</sup> week:

**Lecture:** The most important features and rules of contracts in Hungarian and EU Law. The rules of the freedom of the contracts.

#### 11<sup>th</sup> week:

**Lecture:** The working and development Estate Registry in Hungary, and the common rules in the European Union.

#### 13<sup>th</sup> week:

**Lecture:** The Hungarian legal system compared with other legal systems in the European Union, examining the continental legal system, and the common law.

### 15<sup>th</sup> week: 2<sup>nd</sup> drawing week

#### 3<sup>rd</sup> week:

**Lecture:** The basics of state administration, the legislative, executive bodies, the Parliament, the Government, the Head of state. The court system in general.

#### 5<sup>th</sup> week:

**Lecture:** Hungary and The European Union, the history, the legal and institutional changes since Hungary joined the EU. The sources of Law in the European Union.

#### 7<sup>th</sup> week:

**Lecture:** The most important features and legal rules of the legal person. The founding documents, the common rules of legal persons (entrepreneurships), the organization of legal persons.

#### 10<sup>th</sup> week:

**Lecture:** Most important individual contracts in Hungarian and EU Law, especially sales contract, entrepreneurship contract, employment contract.

#### 12<sup>th</sup> week:

**Lecture:** The practical introduction of the individual contracts, explaining the common rules and the differences.

#### 14<sup>th</sup> week:

**Lecture:** Questions and answers, comparison of Hungarian legal system with the students home countries'.

## Requirements

### A, for a signature:

Participation at lectures is compulsory. Students must attend lectures and may not miss more than three occasions during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't take part in any lectures with

another group. Attendance at lectures will be recorded by the practice leader. Being late is equivalent with an absence. In case of further absences, a medical certification needs to be presented. Missed lectures must be made up for at a later date, being discussed with the tutor.

**B, for a grade:**

For their exam everybody will get an exam grade.

Subject group “Compulsory Subjects”

**Civil Engineering Draw**

Code: MK3MAG1S6SX17-EN

ECTS Credit Points: 4 credits

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 1<sup>st</sup> semester

Its prerequisite(s): -

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 2+2

**Topics:**

The series of lectures are based on the relevant standards.

It reviews the fundamental rules and formal requirements of technical drawing, drawing of projections, views and sections, auxiliary and sectional views. Representations of threaded parts, and threaded fasteners, gears, splines and keys. Drawing standardized machine elements and the concept of manufacturing tolerance and fitting, dimensional specification, geometrical and positioning tolerance, surface roughness and the rules of elaboration of the workshop drawing and detailed drawings of simple machine elements.

In seminar there are six tasks to elaborate: workshop drawing of different machine elements and components.

**Literature:**

*Compulsory:*

- TIBA ZS.: Machine Drawing, ISBN 978-963-318-066-2, Debrecen University Press 2010.

**Schedule**

1<sup>st</sup> week Registration week

**2<sup>nd</sup> week:**

**Lecture:** Drawing standards, formal requirements of machine drawings. Drawing sheet dimensions, title block, defining the line types and thickness groups. Standardized letter and figure shape and sizes, scales, full size, reduction scales, enlarged scales.

**Practice:** issuing task 1: Lettering

**4<sup>th</sup> week:**

**Lecture:** Complex sectional views, removed element, removed sections, specific sectional views and sections, conventional practice in machine drawing.

**Practice:** submitting the task 1: Lettering, elaborating the task 2. Practicing the presentation methods.

**6<sup>th</sup> week:**

**Lecture:** Specific dimensioning, defining and giving conical taper and flat taper

**Practice:** Applying the dimensioning methods to dimensioning parts.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week****9<sup>th</sup> week:****Mid-term test**

**Lecture:** ISO Tolerance system. Defining fits: clearance, transition and interference fit. Form and position tolerances.

**Practice:** Designing Fitting Pieces. Applying the triangulation and parallel line methods to

**3<sup>rd</sup> week:**

**Lecture:** Defining the surfaces of a part. Presentation method in machine drawing, views, auxiliary view, local view, breaking, sectional views and sections.

**Practice:** issuing task 2: Drawing Machine Parts. Practicing the presentation methods.

**5<sup>th</sup> week:**

**Lecture:** General prescriptions for dimensioning, choosing basis surfaces. Conventional dimensioning methods.

**Practice:** submitting the task 2, issuing the task 3: Shaft drawing. Practicing the presentation methods.

**7<sup>th</sup> week:**

**Lecture:** ISO Tolerance system. Basic size, actual size, limits, deviations, fundamental deviation. Defining the tolerance IT grades, hole-base system, shaft base system. Free dimensional tolerance.

**Practice:** submitting the task 3, issuing the task 4: Designing Fitting Pieces. Applying the cutting plane and the cutting sphere method to construct the intersection lines of interpenetrating surfaces. Applying the triangulation and parallel line methods to Develop fitting pieces. Representing tolerances and calculating its dimensions.

**10<sup>th</sup> week:**

**Lecture:** Defining the surface roughness. Feasible roughness with different processing methods. Correlation between the surface roughness and the IT grade of dimension.

**Practice:** issuing the task 5: Screw Fastening and Joints. Presentation of tolerances and fits in drawing. Presentation of surface roughness in drawing.

Develop fitting pieces. Representing fits and calculating its dimensions. Elaborating the shop drawing of pattern development of fitting pieces.

**11<sup>th</sup> week:**

**Lecture:** Standardized Thread forms and its main features. Threads and thread symbols in drawing. Threaded joints: bolted joint, studded joint, screw fastening.

**Practice:** elaborating the task 5, Drawing threaded joints in section and on view.

**13<sup>th</sup> week:**

**Lecture:** Gears and toothed parts. Spur and helical gears, bevel gears, worms, rack and pinion gears, sprockets.

**Practice:** elaborating the gear task 5. Drawing meshing gears in section and on view.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

**12<sup>th</sup> week:**

**Lecture:** springs: standardized representation of helical spring, Belleville spring, buffer spring, annular spring, multi-leaf spring. Keyed joints with saddle keys, sunk keys, parallel keys and woodruff keys. Splined shaft joint.

**Practice:** submitting the task 5, issuing the task 6: Gearing. Drawing keyed joints and splined shaft joint in section and on view.

**14<sup>th</sup> week:**

**End-term test**

**Lecture:** rolling bearings: ball and roller bearings. Riveted joints. Welding symbols and welded joints: butt joint, lap joint, tee joint, corner joint.

**Practice:** submitting the task 6. Drawing bearings, riveted and welded joints in section and on view.

**Requirements**

**A, for a signature:**

Attendance at lectures is recommended, but not compulsory.

Participation at practice is compulsory. Students must attend the practical classes and may not miss more than three practical classes during the semester. In case a student misses more than three, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. The attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed practice classes should be made up for at a later date, to be discussed with the tutor. Students are required to bring the drawing tasks and drawing instruments for the course with them to each practice. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

Students have to submit all the six drawing tasks as scheduled minimum at a sufficient level.

During the semester there are two tests: the mid-term test is in the 9th week and the end-term test in the 14th week. Students have to sit for the tests.

**B, for a grade:**

The course ends in a mid-semester grade. Based on the average of the marks of the drawings and the average of the test results, the mid-semester grade is calculated as an average of them:

average grade of the six drawing tasks

average grade of the two tests

The minimum requirement for the mid-term and end-term tests is 60%.

Based on the score of the tests separately, the grade for the tests is given according to the following (score/grade): 0-59 % = fail (1); 60-69 % = pass (2); 70-79 % = satisfactory (3); 80-89 % = good (4); 90-100 % = excellent (5). If the score of any test is below 60, the student once can take a retake test covering the whole semester material.

**Introduction to Building Construction**

Code: MK3MAG2S6SX17-EN

ECTS Credit Points: 6 credits

Evaluation: exam grade

Year, Semester: 1<sup>st</sup> year, 2<sup>nd</sup> semester

Its prerequisite(s): Descriptive Geometry, Civil Engineering Draw

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 2+2

**Topics:**

Subjects of building construction science. Primary and inferior structures of buildings. Effects on buildings, requirements. Horizontal load-bearing structures. Arches. Solid floors. Monolithic and prefabricated RC floor structures. Frame-type buildings, architectural features. Structure of monolithic RC frame buildings, space limiting structures. Foundation and under grade insulation. Pitched roof: roof truss and roofing. Flat roof. Door (external and internal), window. Floor, stairs. Chimneys and ventilation shafts. Floor finish, façade finish (envelope).

In seminar there are six tasks to elaborate: 3 homework drawings and 3 workshop drawings.

**Literature:**

*Compulsory:*

- AMBROSE, James E.: Building structures, ISBN 0471540609 Wiley, New York 1993.
- BÖHÖNYEY, J.: Building construction encyclopaedia. Iparterv, Budapest 1986.

**Schedule**

1<sup>st</sup> week Registration week

**2<sup>nd</sup> week:**

**Lecture:** Subjects of building construction science. Primary and inferior structures of buildings. Effects on buildings, requirements.

**Practice:** issuing task 1 (homework drawing). Elaborating the workshop drawing 1.

**4<sup>th</sup> week:**

**Lecture:** Foundation.

**Practice:** consultation of task 1 (homework drawing)

**6<sup>th</sup> week:**

**Lecture:** Pitched roof: roof truss and roofing 1.

**Practice:** Issuing task 2 (homework drawing). Elaborating the workshop drawing 3.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week****9<sup>th</sup> week:**

**Lecture:** Pitched roof: roof truss and roofing 1.

Flat roof.

**Practice:** consultation of task 2 (homework drawing)

**11<sup>th</sup> week:**

**Lecture:** Floor, stairs.

Chimneys and ventilation shafts.

**Practice:** consultation of task 3 (homework drawing)

**13<sup>th</sup> week:**

**Lecture:** Façade finish (envelope).

**Practice:** submitting task 3 (homework drawing).

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week****3<sup>rd</sup> week:**

**Lecture:** Horizontal load-bearing structures. Arches. Solid floors. Monolithic and prefabricated RC floor structures.

Frame-type buildings, architectural features. Structure of monolithic RC frame buildings, space limiting structures.

**Practice:** consultation of task 1 (homework drawing)

**5<sup>th</sup> week:**

**Lecture:** Under grade insulation.

**Practice:** submitting task 1 (homework drawing). Elaborating the workshop drawing 2.

**7<sup>th</sup> week:**

**Lecture: Mid-term test**

**Practice:** consultation of task 2 (homework drawing)

**10<sup>th</sup> week:**

**Lecture:** Door (external and internal), window.

**Practice:** submitting task 2 (homework drawing). Issuing task 3 (homework drawing).

**12<sup>th</sup> week:**

**Lecture:** Floor finish.

**Practice:** consultation of task 3 (homework drawing)

**14<sup>th</sup> week:**

**End-term test**

## Requirements

### A, for a signature:

Attendance at lectures is recommended, but not compulsory.

Participation at practice is compulsory. Students must attend the practice classes and may not miss more than three practice classes during the semester. In case a student misses more than three, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed practices should be made up for at a later date, to be discussed with the tutor. Students are required to bring the drawing tasks and drawing instruments for the course with them to each practice. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

Students have to submit all the six drawing tasks as scheduled minimum at a sufficient level.

During the semester there are two tests: the mid-term test is in the 7th week and the end-term test in the 15th week. Students have to sit for the tests.

Homework drawings:	3 x 25 points = 75 points
Tests:	2 x 25 points = 50 points
Workshop drawings:	bonus points (max. 5, for all)
Mid-semester points $\Sigma$	125 points

For signature students must achieve more than 50% of points (63 points).

### B, for a grade:

The course ends in an exam.

Mid-semester points:	125 points
Colloquium:	50 points
$\Sigma$	175 points
Score	Grade
0-87	fail (1)
88-109	pass (2)
110-131	satisfactory (3)
132-153	good (4)
154-175	excellent (5)

## Civil Engineering CAD I

Code: MK3CAD1S4SX17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 2<sup>nd</sup> year, 3<sup>rd</sup> semester

Its prerequisite: Descriptive Geometry, Civil Engineering Draw

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

Making construction plans in ArchiCAD software. Settings of the program, applying styles for construction plans. Making foundation, reinforced concrete, steel and wooden construction plans.

Presentation of the history of CAD. Presentation of the screen. Giving the coordinates and drawing with coordinates. Introduction of draw (line, polygon, circle, arch, line chain, etc.) and draw modifying commands (erase, copy, mirror, array, move, rotate, etc.). Managing the layer and introduction of features, settings. Settings of the line type, context and dimension style. Usage of palettes and tools. Creating and using blocks and references. Introduction of inquiries. Presentation of draw settings, customizing and settings. Detailed presentation of drop-down boxes and toolbars. Usage of model space and paper space. Settings of printing and printing.

Making construction plans in AutoCAD software. Settings of the program, applying styles for construction plans. Making foundation, reinforced concrete, steel and wooden construction plans.

Presentation of the history of CAD. Presentation of the screen. Giving the coordinates and drawing with coordinates. Introduction of draw (line, polygon, circle, arch, line chain, etc.) and draw modifying commands (erase, copy, mirror, array, move, rotate, etc.). Managing the layer and introduction of features, settings. Settings of the line type, context and dimension style. Usage of palettes and tools. Creating and using blocks and references. Settings of printing and printing.

### Literature:

*Compulsory:*

- ArchiCAD 17 help

[www.autodesk.com](http://www.autodesk.com), AutoCAD help

### Schedule

#### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Practice:** Presentation of the history of CAD.  
Presentation of the screen.  
Usage of palettes and tools.

#### 3<sup>rd</sup> week:

**Practice:** Presentation of draw settings, customizing and settings. Detailed presentation of drop-down boxes and toolbars.

**4<sup>th</sup> week:**

**Practice:** Introduction of draw (line, polygon, circle, arch, line chain, etc.) and draw modifying commands (erase, copy, mirror, array, move, rotate, etc.).

**6<sup>th</sup> week:**

**Practice:** 1<sup>st</sup> test

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Practice:** 2<sup>nd</sup> test

**11<sup>th</sup> week:**

**Practice:** Settings of printing.

Semester summary.

**13<sup>th</sup> week:**

**Practice:** 3<sup>rd</sup> test

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

Giving the coordinates and drawing with coordinates.

**5<sup>th</sup> week:**

**Practice:** Drawing practice.

**7<sup>th</sup> week:**

**Practice:** Presentation of draw settings, customizing and settings, drawing slab plan.

**10<sup>th</sup> week:**

**Practice:** Presentation of draw settings, customizing and settings, drawing ground plan.

**12<sup>th</sup> week:**

**Practice:** Drawing practice.

**14<sup>th</sup> week:**

**Practice:** Repeat test.

## Requirements

### A, for a signature:

Participation at practice is compulsory. Students must attend the practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice class with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed practices should be made up for at a later date, to be discussed with the tutor. Students are required to bring the drawing tasks and drawing instruments for the course with them to each practice. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

Students have to submit all the six drawing tasks as scheduled minimum at a sufficient level.

### B, for a grade:

The course ends in mid-semester grade.

The minimum requirement for the mid-term and end-term tests is 60%. Based on the score of the tests separately, the grade for the tests is given according to the following (score/grade): 0-59 % = fail (1); 60-69 % = pass (2); 70-79 % = satisfactory (3); 80-89 % = good (4); 90-100 % = excellent (5).

If the score of any test is below 60, the student can't take any repeat test.

## Geoinformatics I

Code: MK3GEO1S6SX17-EN

ECTS Credit Points: 6 credits

Evaluation: mid-semester grade

Year, Semester: 1<sup>st</sup> year, 2<sup>nd</sup> semester

Its prerequisite(s): Civil Engineering Orientation

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+2

### Topics:

The history of surveying and mapping. The principle of place definition. Reference systems (horizontal, vertical). Projection systems. Important domestic projections (geodesic, geographic). International and domestic basic point networks (horizontal, vertical, 3D). Methods of defining basic points and connecting points. Creating polylines, assessing equipment, Analogous, analytical and numeric assessing procedures. Orthophoto. Inner, relative and absolute transformations. Applying photogrammetry. Basic geodesic instruments and measuring methods. Getting acquainted with and practicing with the tools. Location definition with satellites.

### Literature:

#### *Compulsory:*

- W. Schofield and M. Breach (2007): Engineering Surveying 6<sup>th</sup> edition ISBN–13: 978-0-7506-6949-8, ISBN–10: 0-7506-6949-7
- Wolfgang Torge, Jürgen Müller (2012): Geodesy ISBN: 978-3-11-025000-8.
- James A. Elithorp, Jr. and Dennis D. Findorff: Geodesy for Geomatics and GIS Professionals, 2nd edition.

#### *Recommended:*

- A. Bannister, S. Raymond, R Baker (1992): Surveying ISBN: 0-470-21845-2

### Schedule

1<sup>st</sup> week Registration week

**2<sup>nd</sup> week:**

**Lecture:** Historical surveying, surveying and geodesy, control networks

**Practice:** Adding angles, geodetic coordinate systems, transferring whole circle bearings.

**4<sup>th</sup> week:**

**Lecture:** The Earth's coordinate system (longitude, latitude), datum

**Practice:** Practicing of the horizontal- and vertical-circle readings.

**6<sup>th</sup> week:**

**Lecture:** Trilateration, measuring distances, electronic distance measurement instruments.

**Practice:** Computing the mean orientation angle.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week / Short test**

**9<sup>th</sup> week:**

**Lecture:** Fundamentals of photogrammetry. Analog and digital photogrammetry. Orthophotography. Fundamentals of topography.

**Practice:** Topographic practice, drawing contour lines, creating contour map

**11<sup>th</sup> week:**

**Lecture:** Setting out straight lines, angles, points in given horizontal and vertical positions.

**Practice:** Setting out points with geometric criteria with theodolite and total station. Setting out of a building.

**13<sup>th</sup> week:**

**Lecture:** Traversing: Types of traverse lines

**Practice:** Measuring and computation of an inserted traverse line.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / End-term theoretical test/ qualifier practice**

**3<sup>rd</sup> week:**

**Lecture:** History of mapping, types of maps

**Practice:** Levelling the instrument, setting up a theodolite.

**5<sup>th</sup> week:**

**Lecture:** Surveying for mapping, surveying methods, triangulation, total stations

**Practice:** Compute the orientation angle. Computing the WCB, 1<sup>st</sup> and 2<sup>nd</sup> fundamental task of geodesy.

**7<sup>th</sup> week:**

**Lecture:** Surveying using GPS and conclusion

**Practice:** Intersect with interior angles, intersect with bearings

**10<sup>th</sup> week:**

**Lecture:** Resection, arc-section

**Practice:** Determine a free station, calculating a resection.

**12<sup>th</sup> week:**

**Lecture:** Traversing: Methods and solutions.

**Practice:** Measuring and computation of a free traverse line.

**14<sup>th</sup> week:**

**Lecture:** Area calculations. Coordinate transformations

**Practice:** Transformation of local (measured-) coordinates to a national countrywide coordinate system.

## Requirements

Attendance at lectures is recommended, but not compulsory.

Participation at practice is compulsory. Students must attend the practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring the calculator with them to each practice. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

During the semester, there are two tests: the first one is in the 8th week, and the end-term test in the 15th week. Only the end-term-test is compulsory.

On the 8th week the student may write a short test about the subjects of the first 6 lectures and practices. The maximum reachable point is 10. There is no minimum limit, thus it is not repeatable and the students can't rectify the result of this test.

On the 15th week the students have to write the theoretical test for maximum 90 points. The minimum requirement for the end-term tests is 45 points. If the score of the theoretical test is below 45, the student once can take a retake test on the next week.

During the semester, there is one qualifier practice in the 15th week.

Students have to complete the qualifier practice as scheduled at a minimum sufficient level.

In order to take a mid-semester grade – minimum (2) pass grade – minimum point of tests has to be taken. The minimum and the maximum points related to the tests can be obtained are the follows:

---

### Tests:

1 <sup>st</sup> Test:	Maximum:	<b>10 points</b>	Minimum:	-
2 <sup>nd</sup> Test:	Maximum:	<b>90 points</b>	Minimum:	<b>45 points</b>

---

<b>Summa points:</b>	Maximum:	<b>100 points</b>	<b>45 points</b>
----------------------	----------	-------------------	------------------

---

The course ends with **mid-semester grade**. Based on the score of the tests separately, the grade for the tests is given according to the following table:

Score	Grade
0 – 50 points:	fail (no sign.)
51 – 61 points:	pass (2)
62 – 74 points:	satisfactory (3)
75 – 87 points:	good (4)
88 – 100points:	excellent (5)

## Geoinformatics II

Code: MK3GEO2S6SX17-EN

ECTS Credit Points: 6 credits

Evaluation: exam

Year, Semester: 2<sup>nd</sup> year, 3<sup>rd</sup> semester

Its prerequisite(s): Geoinformatics I

Further courses are built on it: No

Number of teaching hours/week (lecture + practice): 4+2

### Topics:

Basics of geographic information systems. Application of GIS in technical and civil engineering practice. The concept of information systems. The role of location-based information. Information systems components and application. Process of data modelling. Geometric data reference systems. Data sources and data collection methods. Technical background of GIS systems, their operational development perspectives, and their realization problems. Database structures of geoinformatical systems, different database models, development tendency of database management systems. High and low level models of geometric and attribute data storage, theoretical basics and techniques of relational database management. Requirements against geoinformatical analysing systems. Graph-based analyses. Mathematical logic and fuzzy logic in analyses. Experts systems. Overlay and buffer operations. Methods of height determinations, trigonometrical height determinations, levelling. Errors, types of errors, error propagation. Location definition with satellites. Using manual navigation GPS equipment. Basic concepts of space information technology. Space information systems (construction, characterization, models, applications). Construction surveys.

### Literature:

#### *Compulsory:*

- Christopher B. Jones (1997): Geographical information systems and computer cartography, ISBN: 0 582 04439 1
- Paul A. Longley (2005): Geographical information systems and science, ISBN: 047087001X (pbk)

#### *Recommended:*

- A. Bannister, S. Raymond, R Baker (1992): Surveying ISBN: 0-470-21845-2

### Schedule

1<sup>st</sup> week Registration week

2<sup>nd</sup> week:

3<sup>rd</sup> week:

**Lecture:** How GIS works

**Practice:** Basic functions of OPENJump

**Lecture:** Basic definitions of the Geographical Information Systems. History of the GIS.

**Practice:** GIS software, free solutions, and system environment of OPENJump.

**4<sup>th</sup> week:**

**Lecture:** Building geodatabase / Geodatabase design principles.

**Practice:** Raster and vector data in OPENJump

**6<sup>th</sup> week:**

**Lecture:** Database planning. Establishing an Infrastructure for Spatial Information in the European Community (INSPIRE)

**Practice:** Case study: Green Infrastructure in OPENJump. Case study: "Logging" Project

**8<sup>th</sup> week: 1<sup>st</sup> drawing week / Short test**

**9<sup>th</sup> week:**

**Lecture:** Methods of height determination

**Practice:** Trigonometric heighting

**11<sup>th</sup> week:**

**Lecture:** Errors, types of errors

**Practice:** Differential levelling with optical level

**13<sup>th</sup> week:**

**Lecture:** LIDAR. Laser scan.

**Practice:** Processing levelling data - cross sections

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / End-term theoretical test/ qualifier practice**

**5<sup>th</sup> week:**

**Lecture:** Vector and raster spatial data models.

**Practice:** Basic queries and analyses in OPENJump. Cartographic output in OPENJump, visualizing of the results

**7<sup>th</sup> week:**

**Lecture:** Using GIS in the daily engineering practice, case studies

**Practice:** Student's presentations about their own project

**10<sup>th</sup> week:**

**Lecture:** Levelling

**Practice:** Measuring the front of a building

**12<sup>th</sup> week:**

**Lecture:** Angles errors.

**Practice:** Levelling with surveyor's digital level

**14<sup>th</sup> week:**

**Lecture:** Construction surveys

**Practice:** GNSS measuring - real time kinematic observations

## Requirements

Attendance at lectures is recommended, but not compulsory.

Participation at practice is compulsory. Students must attend the practices and may not miss more than three practice classes during the semester. In case a student misses more than three, the subject will not be signed and the student must repeat the course. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to

bring a calculator to each practice. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

During the semester, there are two tests: the first one in the 8th week, and the end-term test in the 15th week. Only the end-term-test is compulsory.

On the 8th week the student may write a short (self-control) test about the subjects of the first 6 lectures and practices. The maximum reachable point is 10. There is no minimum limit, thus it is not repeatable and the students can't rectify the result of this test.

On the 15th week the students have to write the theoretical test for maximum 90 points. The minimum requirement for the end-term tests is 45 points. If the score of the theoretical test is below 45, the student once can take a retake test on the next week.

During the semester, there is one qualifier practice in the 15th week.

Students have to complete the qualifier practice as scheduled at a minimum sufficient level.

The course ends in an **exam grade**. Based on the results of the 2 tests, students are offered an exam grade if the grade of the tests is at least satisfactory (3). The students can either accept or refuse the offered grades. If a student does not accept the grade offered by the lecturer, they should sit for a written exam during the examination period. Evaluation of the written exam is according to the following (score/grade): 0-50 % = fail (1); 51-61 % = pass (2); 62-74 % = satisfactory (3); 75-87 % = good (4); 88-100 % = excellent (5).

## Hydraulics & Hydrology I

Code: MK3VIZ1S6SX17-EN

ECTS Credit Points: 6

Evaluation: exam

Year, Semester: 2<sup>nd</sup> year, 4<sup>th</sup> semester

Its prerequisite(s): Civil Engineering Orientation

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

### Topics:

Hydraulics: Elementary fluid mechanics. Understanding of the fundamental principles of hydrostatics and hydrodynamics; the basic ideas of dimensioning of hydraulic structures and hydraulic machinery. Hydrostatics (absolute and relative equilibrium, pressure head diagrams and buoyancy). Application of the Bernoulli equation (laminar and turbulent flow in pipes, losses and pipe systems). The impulse momentum equation, open channel flow (Chezy). Specific energy, supercritical and subcritical flow, hydraulic jump, stilling basins. Gradually varying channel flow. Hydraulic control structures, bridges, culverts. Wave theory. Shock waves in open channels and in pipes. Laminar and turbulent flow, analysis of laminar flow through pipes and porous media, turbulent flow velocity and shear stress distribution, energy loss equation, hydraulically smooth and rough pipes. Hydraulic machinery.

Hydrology: Processes and components of precipitation, evapotranspiration, infiltration and runoff. Quantity and quality of surface and subsurface waters. Anthropogenic impacts on the elements of the water cycle. Overall understanding of physical hydrologic principals, processes and related observation/measurement techniques, calculation methods: including the ability to critically analyse and apply that understanding to new problems. The aspects of hydrology in water management and civil engineering practice. The content provides a good basic background for further studies or work.

- Tamim Younos, Tammy E. Parece (Ed.): Sustainable Water Management in Urban Environments, The Handbook of Environmental Chemistry Vol47, Springer International Publishing Switzerland (2016), ISBN: 978-3-319-29335-6

### Schedule

1 <sup>st</sup> week Registration week	
--	--

2nd week:

Lecture: Elementary fluid mechanics.

Practice: Selected Problems in Fluid Mechanics

4th week:

Lecture: Application of the Bernoulli equation (laminar and turbulent flow in pipes, losses and pipe systems). The impulse momentum equation, open channel flow (Chezy).

Practice: Fluid Mechanics Problem Solving on Bernoulli Equation; Chezy and Manning equations

6th week:

Lecture: Laminar and turbulent flow, analysis of laminar flow through pipes and porous media, turbulent flow velocity and shear stress distribution, energy loss equation, hydraulically smooth and rough pipes. Hydraulic machinery.

Practice: Pipe Flow Calculations; Reynold's Number Calculation

8th week: 1st drawing week / 1st test

9th week:

Lecture: Introduction to hydrology and hydrogeology: the focus of hydrology. The role of hydrology in the society and economy. Physical forms of water. The hydrologic cycle and the water budget. Water balance equation. The effect of the climate change on the elements of the hydrological cycle.

3<sup>rd</sup> week:

Lecture: Understanding of the fundamental principles of hydrostatics and hydrodynamics; the basic ideas of dimensioning of hydraulic structures and hydraulic machinery. Hydrostatics (absolute and relative equilibrium, pressure head diagrams and buoyancy).

Practice: Calculus - practice problems (Hydrostatic Pressure and Force; Center of Mass; Hydrostatic Equation; Pressure and fluid statics, Buoyant force example problems.

5th week:

Lecture: Specific energy, supercritical and subcritical flow, hydraulic jump, stilling basins. Gradually varying channel flow. Hydraulic control structures, bridges, culverts. Wave theory. Shock waves in open channels and in pipes.

Practice: Analytical solution to problems of hydraulic jump in horizontal triangular channels; Hydraulic jumps in rectangular channels; Classic energy problem in open-channel flow

7th week:

Study trip: Tisza Dam (Kisköre Dam); *Fish Ladder*

10th week:

Lecture: Precipitation: forms and types of precipitation. Theories of precipitation formation. Quantity variables – in time and space. Rain characteristics.

Evaporation: the physics of evaporation. Evaporation of open water surface, soil and vegetation – evaporation, transpiration and evapotranspiration

Practice: Solving examples for water balance equation

11th week:

Lecture: Infiltration: process and characteristics. The infiltration curve. Water forms in the soil. Characterization of ground-water regimes. Physical, chemical and bacteriological properties of ground water. Potential pollution sources impacting sub-surface waters.

Practice: Calculation of infiltration through porous medium – Darcy's law

13th week:

Hydrology in the water management and civil engineering practice.

Study trip

15th week: 2nd drawing week / 2nd test

Practice: Calculation of average areal precipitation with different methods and calculation of precipitation extrema. (Montanari method). (Homework No 1.)

12th week:

Lecture: The runoff process. The importance of the watershed. Watershed characteristics. The time of concentration, runoff ratio.

Type of surface waters.

Hydrology of streams (potamology). Cross- and longitudinal sections of streams and their valleys. Stream characterization. Type and characteristics of lakes.

Practice: Watershed delineation. (Homework No 2.) Performing the double transformations for rainfall-runoff calculations.

14th week:

Lecture: Streamflow regimes. Frequency and duration. Relation between water level and discharge – QH curve. Permanent and non-permanent rating curves. Flash floods.

Practice: Calculation of frequency and duration curves (Homework No 3.).

## Requirements

Participation at **lectures and practice classes** are **compulsory**. Students must attend lectures and may not miss more than three lectures during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at lectures will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator and the printed materials of the lectures to each lecture and practice. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

Students have to **submit all the two tests and the five homework tasks** as scheduled minimum at a sufficient level. During the semester there are two tests – the 1<sup>st</sup> test is in the 8<sup>th</sup> week and the 2<sup>nd</sup> test in the 15<sup>th</sup> week – and there are five homework tasks. In order to get the signature minimum point of tests and home works has to be taken (Summa minimum 61 points from 100 points). The minimum and the maximum points related to the tests and home works can be obtained are the follows:

<b>Tests:</b>				
1. Test:	Maximum:	<b>100 points</b>	Minimum:	<b>60 points</b>
2. Test:	Maximum:	<b>100 points</b>	Minimum:	<b>60 points</b>
<b>Homeworks:</b>				
1. Homework:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
2. Homework:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
3. Homework:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
4. Homework:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
5. Homework:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
	Sum:	<b>100 points</b>		<b>50 points</b>
<b>Summa points:</b>				
	Maximum:	<b>100 points</b>		<b>61 points</b>

Where Summa = 45% of sum points of the 2 tests + 10% of sum points of the 5 Homework tasks/

If the score of the test is below 60, the student once can take a retake test covering the whole semester material:

(score/grade): 0-60 % = fail (1); 61-70 % = pass (2); 71-80 % = satisfactory (3); 81-90 % = good (4); 91-100 % = excellent (5).

The course ends with oral exam.

## **Introduction to Water Engineering**

Code: MK3VIZ2S6SX17-EN

ECTS Credit Points: 6

Evaluation: exam

Year, Semester: 3<sup>rd</sup> year, 5<sup>th</sup> semester

Its prerequisite(s): Hydraulics & Hydrology I.

Further courses are built on it: No

Number of teaching hours/week (lecture + practice): 4+2

### **Topics:**

Water engineering refer to water management and hydraulic structures. Hydraulic structures are engineering structures constructed for the purposes of harnessing and using water resources (groundwater, surface water, lakes, sea, etc.) or for the prevention of the negative and destructive actions (floods, shore erosion, etc.) of water on the surrounding environment. There are a large variety of hydraulic structures to serve the many water management purposes for which water resources are put to use. Main topics are Classification of hydraulic structures by purpose and types; Site selection factors; design of gravity dams; classification of reservoirs. Also case studies in different water management issues - water resources

management, excess water problems, flood management, settlement-scale water management issues, thermal water management, water quality control management, etc. - are discussed.

The series of lectures are based on the relevant standards.

This course presents basic technical parameters of water public work, water consumption and its features. Water resources in Hungary (in Europe). Water quality and water classification. Physical, chemical and biological parameters. Water supply system. Water distribution system, network. Types of sewers. Estimating wastewater flow. Sewer design. Storm water inlets. Manholes.

The basic designing instructions are presented for public utilities (pressure water system, sewer system).

**Literature:**

*Compulsory:*

**Schedule**

<b>1<sup>st</sup> week Registration week</b>	
<p><b>2<sup>nd</sup> week:</b></p> <p><b>Lecture:</b> the aim of water management; the impacts of climate change on water management; the relation between water management and hydraulic structures; the aim and technical measures of harnessing and using water resources</p> <p><b>Practice:</b> issuing the task: study of one specific river basin management plan from given aspects</p> <p><b>4<sup>th</sup> week:</b></p> <p><b>Lecture:</b> the aim and technical measures for the prevention of negative water related events in hilly areas</p>	<p><b>3<sup>rd</sup> week:</b></p> <p><b>Lecture:</b> the aim and technical measures of the prevention of negative water related events in plain areas; the aim and technical measures of irrigation</p> <p><b>Practice:</b> examples for technical measures of harnessing and using water resources; examples for technical measures of prevention of floods and excess water in plain areas; issuing the task 2:open channel design</p> <p><b>5<sup>th</sup> week:</b></p> <p><b>Lecture:</b> urban water management issues; technical measures of artificial recharge of groundwater</p> <p><b>Practice:</b> examples for special cases like thermal water management, sewerage of</p>

**Practice:** examples for technical measures for erosion and flood control in hilly areas; issuing the task 4: check dam design

**6<sup>th</sup> week:**

**Lecture:** classification of hydraulic structures by purpose and types

**Practice:** examples and case studies for purposes and types of hydraulic structures

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Lecture:** The main features of public works. Water resources group. The water consumption.

**Practice:** issuing the task 1: Designing the pressure water system and sewer system. Drawing the general plan. Consultation.

**11<sup>th</sup> week:**

**Lecture:** Modelling of the water system. General prescriptions for dimensioning, choosing basis surfaces. Conventional dimensioning methods.

**Practice:** Applying the dimensioning methods to dimensioning parts. Longitudinal profile.

**13<sup>th</sup> week:**

**Lecture:** Dimension methods of the waste water system.

**Practice:** Applying the dimensioning methods to dimensioning parts.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

small settlements, storm water management, etc.

**7<sup>th</sup> week:**

**Lecture:** environmental impacts of water management measures; sustainability issues

**Practice:** examples for environmental impacts of existing water management measures; submission of tasks

**10<sup>th</sup> week:**

**Lecture:** Water quality and classification, water treatment-purification process. Designing (dimension) the pressure water system.

**Practice:** Longitudinal section. Practicing the presentation methods.

**12<sup>th</sup> week:**

**Lecture:** Group the sewer systems. Combined sewer system and separated sewer system. Pressure sewer system, vacuum sewer system.

**Practice:** Consultation.

**14<sup>th</sup> week:**

**Lecture:** Building of water supply system, sewer system. Manholes in the sewer system.

**Practice:** Consultation and submission of drawing tasks.

## Requirements

### A, for a signature:

Attendance at **lectures** is recommended, but not compulsory.

Participation at **practice** is compulsory. Students must attend the practice classes and may not miss more than three times during the semester. Students can't make up a practice class with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed practice classes should be made up for at a later date, to be discussed with the tutor. Students are required to bring the drawing tasks and drawing instruments for the

course to each practice. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

Students have to **submit all the two drawing tasks** as scheduled minimum at a sufficient level.

Students have to **submit the task** on time at a sufficient level.

During the semester there is one test in the 7<sup>th</sup> week. Students have to sit for the tests. If the score of the test is below 30%, the student once can take a retake test covering the whole semester material.

### **B, for a grade:**

The course ends in a colloquium. Based on the average of the marks of the drawings and the test results, the grade is calculated as an average of them:

- average grade of the two drawing tasks
- the grade of one test

The minimum requirement for the test is 60%. Based on the score of the test, the grade for the test is given according to the following (score/grade): 0-59 % = fail (1); 60-69 % = pass (2); 70-79 % = satisfactory (3); 80-89 % = good (4); 90-100 % = excellent (5).

If the score of the test is below 60, the student once can take a retake test covering the whole semester material.

## **Construction Materials**

Code: MK3EPA1S6SX17-EN

ECTS Credit Points: 6 credits

Evaluation: exam

Year, Semester: 2<sup>nd</sup> year, 3<sup>rd</sup> semester

Its prerequisite(s): Civil engineering orientation

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

### **Topics:**

The lectures are focused on the material properties of construction materials. It reviews the manufacturing and the requirements of different construction materials and those components. Basic topics are the following: Design of aggregate and normal concrete (concrete recipes). New concrete technologies (SFRC, SCC, HSC). Recycling of concrete. Steel. Load bearing glasses. Ceramics. Plastics. Wooden materials, etc. The presentations are connected with laboratory tests of construction materials. Glass as building material (types of glasses and properties of different glass types, mechanical and physical properties of glass, introduction in possibilities of creating load bearing glasses.). Wooden materials in building

industry, mechanical and hydro-technical properties (laboratory testing of wood, effect of fiber direction on properties of wood, force-deflection diagrams, determination of Young's modulus etc.). Steel in engineering applications. Mechanical properties of hot and cold formed steels. Stress-strain diagrams. Effect of carbon content on forming and welding of steel. Laboratory tensile testing of steel (reinforcement). Hardness of steel. Effect of temperature on the external work of steel (Charpy-hammer tests). Alloys. Plastics in engineering applications. Organic binder materials (bituminous materials). Ceramic. History of ceramics. Strength and durability of ceramic materials. Laboratory compression tests of bricks.

### **Literature:**

#### *Compulsory:*

- Stephen Timoshenko (1955): Strength of Materials: Elementary Theory and Problems, Van Nostrand

### **Schedule**

**1<sup>st</sup> week Registration week**

**2<sup>nd</sup> week:**

**Lecture:** Basic definitions. History of construction materials. Development of construction materials. Grouping of construction materials. Rheology of materials. Idealisation diagrams.

**Practice:** Weight, density of solid and liquid type materials. Discussing the homework topics.

**4<sup>th</sup> week:**

**Lecture:** Modifiers. Concrete mix-design. Properties of fresh concrete.

**Practice:** Consistency of fresh concrete

**6<sup>th</sup> week:**

**Lecture:** Mortars. Classification of mortars. Masonry. Plasters. Bedding and covering mortars. Surface and wall-forming mortars. Waterproof cement mortar. Special-purpose mortars. Special concrete. (Mass concrete, fiber, recycled, lightweight concrete, self-compacting, high strength, looking ...)

**Practice:** Special concrete (four kinds of mix / break). Distribute of homework: small expertise: The use of construction materials through good and bad examples shown.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week / 1<sup>st</sup> test****9<sup>th</sup> week:**

**Lecture:** Wooden materials in building industry, mechanical and hydro-technical properties

**Practice:** Effect of fibre direction on properties of wood, force-deflection diagrams, determination of Young's modulus etc.

**3<sup>rd</sup> week:**

**Lecture:** Aggregates. Sieve curve. Sieve curve design. Inorganic binder materials.

**Practice:** Aggregates. Sieve curve design. Curing of binder materials

**5<sup>th</sup> week:**

**Lecture:** Hardened concrete properties, Durability of concrete.

**Practice:** Determination of compressive strength of concrete with laboratory measurements with classification.

**7<sup>th</sup> week:**

Study trip

**10<sup>th</sup> week:**

**Lecture:** Plastics. The properties of plastics. The use of special plastics. Composites, for example glass-fiber reinforced plastic, tarpaulins.

**Practice:** PVC, PE, PP, fire resistance, chemical resistance. Presentation of composite, fiber-reinforced plastics, such as glass, carbon fiber materials.

Insulation systems.

Heat, water, - sound insulation materials and their requirements. Paints. Opacity, layer thickness, coverage.

**11<sup>th</sup> week:**

**Lecture:** Steel in engineering applications. Mechanical properties of hot and cold formed steels. Stress-strain diagrams. Effect of carbon content on forming and welding of steel. Effect of temperature on the external work of steel.

**Practice:** Laboratory tensile testing of steel (reinforcement). Hardness of steel.

**13<sup>th</sup> week:**

**Lecture:** Glass as building material (types of glasses and properties of different glass types, mechanical and physical properties of glass, introduction in possibilities of creating load bearing glasses.)

**Practice:** Bending tests of float glasses.

**12<sup>th</sup> week:**

**Lecture:** Ceramic. History of ceramics. Strength and durability of ceramic materials.

**Practice:** Laboratory compression tests of bricks.

**14<sup>th</sup> week:**

Study trip

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / 2<sup>nd</sup> test****Requirements****A. For a signature:**

Participation at **lectures** is **compulsory**. Students must attend on lectures and may not miss more than three lectures during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at lectures will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring the calculator and the printed materials of the lectures to each lecture and practice. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

Students have to submit all the laboratory tasks as scheduled minimum at a sufficient level. During the semester there are two tests – the 1st test in the 8th week and the 2nd test in the 15th week – and there is one homework task. In order to take the signature minimum points of the test and the homework task has to be taken, and submit all the laboratory tasks.

**B. For an exam grade:**

In order to take the exam grade – minimum (2) pass grade, – minimum point of test and homework task and written exam has to be taken (Summa minimum 61 points from 100 points). The minimum and the maximum points related to the tests and homework and exam can be obtained are the follows:

**Tests:**

1. Test: <b>points</b>	Maximum:	<b>20 points</b>	Minimum:	<b>12</b>
2. Test: <b>points</b>	Maximum:	<b>20 points</b>	Minimum:	<b>12</b>
	Summa:	<b>40 points</b>		<b>24 points</b>

<b>Homework:</b>			
Homework: <b>points</b>	Maximum:	<b>10 points</b>	Minimum: <b>6</b>
<b>Written exam:</b>	Maximum:	<b>50 points</b>	<b>30 points</b>
<b>Summa points:</b>	Maximum:	<b>100 points</b>	<b>60 points</b>

The course ends with an **exam grade**. Based on the summa points of the tests and the points of the homework and points of the written exam, the final grade is defined according to the following calculation: 0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5).

## Geotechnics I

Code: MK3GTH1S6SX17-EN

ECTS Credit Points: 6

Evaluation: exam grade

Year, Semester: 2<sup>rd</sup> year, 4<sup>th</sup> semester

Its prerequisite(s): Civil Engineering Orientation, Strength of Materials

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

### Topics:

The main aim of the course to give a global perspective and understanding of geological and geotechnical processes specifically tailored to students majoring in engineering. Topics includes: plate tectonic movements; the interactions between the solid earth, hydrosphere and atmosphere; the formation and identification of important mineral and rock materials that make up the surface of the Earth; why volcanoes and earthquakes occur; what determines their locations; what are the major milestones in the evolution of the Earth and what is the local geologic history of Hungary. Soil mechanical explorations, methods, and tools. Soil physics, particle size distribution, phase relations. Natural water content, and consistency limits (shrinkage, plastic, saturation, liquid). Indexes (plasticity, consistency). Compaction and Proctor test. Classification of soil. Strength, stresses in the soil at failing. Water in the soil. Effective and neutral stresses. Overburden pressure. Flow of water through soil due gravity (Darcy's law, coefficient of permeability, flow nets). Shear strength of soil (Mohr-Coulomb failure criterion).

The course is supposed to provide students with necessary knowledge to be able to participate in engineering geological and geotechnical field and laboratory research upon obtaining their bachelor's degree.

## Schedule

### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Lecture:** Earth sciences and geotechnics. Origin of the Solar System and the Earth. The structure of the Earth, plate tectonics, magmatism and volcanism, rock cycle. Concepts of mineralogy and geology. Igneous rocks (origin, types and features).

**Practice:** Basics of mineralogy. Identifications of minerals. Characterization of most important rock forming minerals. Identification and characterization of igneous rocks.

#### 3<sup>rd</sup> week:

**Lecture:** Origin of sedimentary rocks. Weathering. Clastic, chemical-biogenic, chemical and biogenic sedimentary rocks. Classification, characterisation. Metamorphic rocks.

**Practice:** Identification of and characterization of sedimentary and metamorphic rocks. Building stones, rocks as construction raw materials.

**4<sup>th</sup> week:**

**Lecture:** Basics of structural geology, plastic and fractured deformation in the Earth crust. Historical geology, stratigraphy, Earth history. Regional geology of the Earth. Endogene and exogene processes (volcanism, earthquakes, mass movements, ground subsidence, erosion, abrasion etc.)

**Practice:** Methods and sources of geological data collection. Geological sections and maps and their editing.

**6<sup>th</sup> week:**

**Lecture:** Basic rock mechanics. Rock strength and discontinuities. Rock mass classification methods and their application. Engineering geology and mapping.

**Practice:** Case studies

**8<sup>th</sup> week: 1<sup>st</sup> drawing week****9<sup>th</sup> week:**

**Lecture:** Hydrometer analyses. Parameters of the particle size distribution curve. Phase, weight-volume relationships of soils.

**Practice:** Calculating of phase, weight and volume ratios of soils. Density and bulk density of soils. Proctor test. Editing of Proctor curve.

**11<sup>th</sup> week:**

**Lecture:** Stress in soils (total, effective, and neutral). Overburden pressure. Mohr/Coulomb failure criteria.

**Practice:** Classification and qualification of soils (usage, compaction etc.). Practical calculations of compaction, phase, weight and volume ratios.

**13<sup>th</sup> week:**

**Lecture:** Prestress of the soil. Overconsolidation ratio (OCR). Critical state

**5<sup>th</sup> week:**

**Lecture:** Site investigation methods (indirect and direct), augering, drilling and sampling of soils and rocks. Basic mineralogical laboratory tests. Groundwater and its types, aquitards, aquicludes and aquifers. Groundwater movement. Wells.

**Practice:** Presentation of augering and soil sampling methods. Geological and hydrogeological databases and their usage. Engineering geological maps.

**7<sup>th</sup> week:**

**Lecture:** Soil particle sizes and distribution.

Midterm test.

**Practice:** Presentation of sieving and hydrometry. Editing of distribution curve.

**10<sup>th</sup> week:**

**Lecture:** Index tests and classification of soils. Shrinkage, plastic, saturation and liquid limits. Shrinking and swelling. Linear shrinkage and swelling pressure. Soil compaction. Proctor test.

**Practice:** Testing of Atterberg limits. Calculation of limits and relating indexes.

**12<sup>th</sup> week:**

**Lecture:** Soil mechanics parameters describing the strength of the soil (internal friction and cohesion). Laboratory tests describing these parameters.

**Practice:** Presentation of various (unaxial, triaxial, direct shear etc.) soil strength tests, relating calculations.

**14<sup>th</sup> week:**

theory. Cam Clay model and related soil mechanics parameters.

**Practice:** Vertical stress calculations (included total stress, pore water pressure and effective stress).

**Lecture:** Deformation of soil. Oedometer test. 1D compressional moduli. End of semester test.

**Practice:** Consultation in connection with drawing project.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / 2<sup>nd</sup> test**

## Requirements

### A, for a signature:

Attendance: Participation at lectures is critical to successful completion of this course. For the laboratory/problem solving classes the participation is compulsory. More than 3 unexcused absences result incompletion of the course. There are no make up labs with another group. Tests and oral exam questions will be covered in lectures. Making lecture notes is critical to complete the course.

### B, for a grade:

Completion of the course: Submitting the laboratory reports and the homework assignments. Participating at least 70% at laboratory/problem solving. D or higher grades for both tests. There is one make up test for each. Grading of tests: 0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5). Grading of the course:

Mid term test 20%

End of semester test 20%

Final (verbal exam) 60%

Oral exam is taken at the end of the semester in the exam period. Students have to sign up for the scheduled exam in the Neptun System minimum two days in advance.

## Geotechnics II

Code: MK3GTH2S6SX17-EN

ECTS Credit Points: 6

Evaluation: exam grade

Year, Semester: 3<sup>rd</sup> year, 5<sup>th</sup> semester

Its prerequisite(s): Geotechnics I.

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

**Topics:**

Standards and codes of practice in geotechnical engineering. Soil compressibility, consolidation, and settlements. Engineering soil properties and their measurement. Understanding and preparing soil mechanics reports and recommendation.

Stresses in the infinite half-space at rest, plastic equilibrium in soils. Earth pressure determination, active and passive earth pressure situations. Slope stability analysis resistance, non-cohesive and cohesive land mass analysis, vertical stability of earth walls. Supporting land of permanent and temporary structures (retaining walls, gabions, reinforced soil structures, traditional bracing Siemens bracing, sheet piling, bracing modern systems). Earthworks drainage (surface and subsurface drainage, work trenches, drainage trenches and work spaces, advanced dewatering processes). Earthworks design (design works, earth works in calculating the quantity, distribution of land masses). Construction of earthworks and earthmoving. Earth-moving machinery.

Scope of earth works. Plastic limit states, Rankine earth pressures. Earth pressure and passive resistance of real" walls. Soil static design of retaining structures. Stability of earth works.

**Literature:**

Compulsory:

- Kezdi, A.: Soil Mechanics

Recommended:

- Bell, F. G.: Engineering Geology and Construction. Taylor and Francis, London, 2004. Hausmann, M.: Engineering principles of ground modification. Mc Graw – Hill Publishing Company, New York, 1986.

- Terzaghi, K., Peck, R.: Soil mechanics in engineering practice. John Wiley and Sons, New York, 1943.
- Whitlow, R.: Basic soil mechanics. Longman Scientific and Technical, 1990.

## Schedule

### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Lecture:** Filter criteria. Self-filtering. Ground freezing.

Capillarity. Seepage pressures and hydraulic failing.

**Practice:** Presentation of in-situ and laboratory permeability testing methods (constant and falling head laboratory apparatus, infiltrometer methods, pumping test in wells). Calculation of hydraulic conductivity used by empirical formulas. Calculation of groundwater flow. Editing of flow net. Assessment of capillary rise.

#### 4<sup>th</sup> week:

**Lecture:** Soil explorations. Site investigations, boring and sampling. Soil mechanics report. Contents and drawing supplements (Plan view, Borehole log, cross section.).

**Practice:** Field presentation of drilling, hand-augering, soil sampling, groundwater sampling, dynamic penetrometer testing and vane shear test.

#### 6<sup>th</sup> week:

**Lecture:** Influence of water on the stability of slopes. Stability of infinite slopes. Influence of seepage on the stability. Stability of vertical cut. Design of simple excavations.

**Practice:** Calculation of characteristic values of soil mechanical parameters. Writing of geotechnical site investigation report. Editing of soil mechanical log, and cross section.

### 8<sup>th</sup> week: 1<sup>st</sup> drawing week

#### 3<sup>rd</sup> week:

**Lecture:** Liquefaction.

Ground water. Yearly cycle of the water table at continental climate. Predicting the characteristic value of ground water level.

**Practice:** Presentation of oedometer test procedure. Editing of compression curve and consolidation curve. Calculation of the 1D compression moduli. Determining of preconsolidation pressure, compression and recompression index.

#### 5<sup>th</sup> week:

**Lecture:** Determination of cross-section area and calculating the volume of soil. Diagram and the distribution of masses. Parameters, factors for design of slopes. Types of instability of slopes. Stress change on slopes.

**Practice:** Evaluation of laboratory testing results. Assessment of soil physical parameters by empirical formula. Qualification of soils (using for earthworks, compaction, frostbite, etc.). Evaluation of field test results (dynamic penetrometer, cone penetration test, vane shear test).

#### 7<sup>th</sup> week:

**Lecture:** The compaction process. Relevant laboratory and field testing for soil properties and compaction. Compaction equipment; application for various materials. Quality control and testing requirements

Midterm test.

**Practice:** Consultation about drawing project.

**9<sup>th</sup> week:**

**Lecture:** Lateral earth pressure at rest. Rankine's lateral earth pressures (active, passive). Earth pressure with sloping backfill. Graphic solution for Coulomb's active earth pressure (Culmann's solution). Active and passive force with earthquakes force. Calculating the earth pressures for drained and undrained loading.

**Practice:** Concepts and general features of earthworks. Long and cross sections, volume calculations. Soil suitability.

**11<sup>th</sup> week:**

**Lecture:** Mechanism based kinematic and equilibrium solutions for gravity retaining walls. Soil strength and factors for design of retaining walls. Stress changes in soil near retaining walls. Influence of water on retaining walls. Reinforced soil walls. Compaction stresses.

**Practice:**

Slope stability investigation in homogeneous soil using friction circle method.

**13<sup>th</sup> week:**

**Lecture:** Cut offs (Cement and chemical grout curtains; Slurry walls; Concrete walls; Steel sheet piling; Freezing) Pumping test. Discharge, environmental problems. Additional settlement from the reduction of water table.

**Practice:** Stability analyses of sheet piles.

**10<sup>th</sup> week:**

**Lecture:** Type of retaining structures (Gravity walls, cantilever walls, anchored or propped walls). Pressure on retaining wall due to surcharge. Failure of retaining walls. Dewatering and filtering systems of retaining walls.

**Practice:** Calculation of lateral earth pressure (at rest, active and passive state) in non-cohesive and cohesive soils.

**12<sup>th</sup> week:**

**Lecture:** Dewatering during construction. sump and ditches; deep-well, well-points (conventional and vacuum), horizontal drainage. Well theory. Confined aquifer (full, partial penetration well). Group wells. Filter design (Terzaghi's criteria)

**Practice:** Stability analyses of gravity retaining walls.

**14<sup>th</sup> week:**

**Lecture:** Summary. Preparation for the test. End of Semester test.

**Practice:** Consultation with the assigned design projects.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week****Requirements****A, for a signature:**

Attendance: Participation at lectures is critical to successful completion of this course. For the laboratory/problem solving classes the participation is mandatory. More than 3 unexcused absences result in no completion of the course. There are no make up labs with another group. Tests and oral exam questions will be covered in lectures. Making lecture notes is critical to complete the course.

**B, for a grade:**

Completion of the course: Submitting the laboratory reports and the Home Work assignments. Participating at least 70% at laboratory/problem solving. D or higher grades for both tests. There is one make up test for each. Grading of tests: 0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5).

Grading of the course:

- Mid term test 15%
- End of semester 15%
- Slope stability HWA10%
- Retaining wall HWA 10%.
- Final (verbal exam) 50%

An oral exam is taken at the end of the semester in the exam period. Students have to sign up for the scheduled exam minimum two days in advance.

**Geotechnics III**

Code: MK3GTH3S6SX17-EN

ECTS Credit Points: 6

Evaluation: exam grade

Year, Semester: 3<sup>rd</sup> year, 6<sup>th</sup> semester

Its prerequisite(s): Geotechnics II.

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

**Topics:**

Construction of earth works (design, building and monitoring). Geosynthetics.

Foundation Types. Design of rigid and flexible shallow foundations (spread, pier, slab, box foundation). Determination the bearing capacity and settlements of soils under load. Factors effecting the value of differential settlements. Stability analysis. Types and design of different support systems of Excavations. Bearing capacity of pile foundations. Anchorages. Design of ground Anchor. Design and construction of cast in situ and prefabricated diaphragm walls. Dewatering.

History of deep foundation. Load bearing capacity of foundations. Effect of the surrounding soil/rock. Load transmitting systems. Piling techniques, examples. Designing of piles and pile groups. Building and designing of diaphragm walls. Diaphragm wall boxes. Design aspects of underground garages. Underpasses. Pipe bursting. Lining materials and techniques of underground structures. Soil improvements.

## Schedule

### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Lecture:** Geosynthetics. Design of geosynthetic filters.

**Practice:** Syllabus, polices, introduction.

#### 4<sup>th</sup> week:

**Lecture:** Bearing capacity enhancement factors to account for shape, depth and weight. Bearing capacity of homogeneous and layered soils. The effect the water table. Shallow foundations subject to horizontal and moment loads.

**Practice:** Shallow foundation HWA (I/2)

#### 3<sup>rd</sup> week:

**Lecture:** Types of foundations. Shallow strip foundations (footings). Concept of upper and lower bound solutions. Simple lower bound (safe) and upper bound (unsafe) solutions. Undrained analyses (simple circular arc, theories of Prandl and Reissner). Drained analyses (Terzaghi's theory)

**Practice:** Shallow foundation HWA (I/1)

#### 5<sup>th</sup> week:

**Lecture:** Soil structure interaction principles. Contact pressure distribution. Factors influencing contact pressure distribution beneath rigid and flexible footings. Centrally and eccentrically loaded cases.

**Practice:** Shallow foundation HWA (I/3)

**6<sup>th</sup> week:**

**Lecture:** Idealized elastic soil behavior. Stress distribution under the foundation. Consolidation theories. Settlement analysis of shallow foundations on clay and sand.

**Practice:** Shallow foundation HWA (I/4)

**8<sup>th</sup> week: 1<sup>st</sup> drawing week****9<sup>th</sup> week:**

**Lecture:** Fundamentals of Deep Foundations. Pile Foundations. Pile types. Pile driving and allowable stresses. Construction, inspection, specifications and case histories.

**Practice:** Settlement estimation HWA (II/2)

**11<sup>th</sup> week:**

**Lecture:** Soil-Structure Interaction for Deep Foundations. Axial loading of deep foundations. Base resistance of a single pile. Lateral Loading of deep foundations. Load testing of deep foundations. Static analyses of piles and drilled shafts in clays and in sand. Time dependency of capacities. Field Load Testing of Foundations.

**Practice:** Piled foundation HWA (III/1)

**13<sup>th</sup> week:**

**Lecture:** Case studies of failed foundations. Fracture and settlement analyses of the case studies.

**Practice:** Piled foundation HWA (III/3)

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week****7<sup>th</sup> week:**

**Lecture:** Balancing bearing capacity and settlement in design. Allowable total and differential settlement of structures. Raft foundations. Heave and settlement of foundations due to changes of groundwater.

Midterm test.

**Practice:** Settlement estimation HWA (II/1)

**10<sup>th</sup> week:**

**Lecture:** Structural issues and design. Drilled Shaft Foundations. Other types of foundations (micropiles, helical anchors, anchors, soil nails etc.) Static Capacity Design of Deep Foundations.

**Practice:** Settlement estimation HWA (II/3)

**12<sup>th</sup> week:**

**Lecture:** Pile testing and driving formulas. Wave equation analyses. Capacity of pile groups. Special foundations. Foundation design in relation to ground movements. Foundation on recent refuse fills.

Design of Foundation for seismic forces.

Special problems with foundations on swelling soils.

**Practice:** Piled foundation HWA (III/2)

**14<sup>th</sup> week:**

**Lecture:** Preparation/instructions for the test and for the verbal exam. End of Semester test.

**Practice:** Consultation with the assigned design projects.

**Requirements****A, for a signature:**

Attendance: Participation at lectures is critical to successful completion of this course. Participation is compulsory at the laboratory/problem solving classes. More than 3 unexcused absences result incompletion of the course. There are no make up labs with another group.

Tests and oral exam questions will be covered in lectures. Making lecture notes is critical to complete the course.

**B, for a grade:**

Completion of the course: Submitting the laboratory reports and the homework assignments. Participating at least 70% at laboratory/problem solving. D or higher grades for both tests. There is one make up test for each. Grading of tests:: 0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5).

Grading of the course:

Mid term Test 12%

End of semester Test 12%

Shallow foundation HWA 14%

Settlement estimation HWA 12%

Piled foundation HWA 10%

Final (verbal exam) 40%

An oral exam is taken at the end of the semester in the exam period. Students have to sign up for the scheduled exam in the Neptun System minimum two days in advance.

## Theory of Transportation & Basics of Urban Planning

Code: MK3KOZ1S6SX17-EN

ECTS Credit Points: 6

Evaluation: mid-semester grade

Year, Semester: 2<sup>nd</sup> year, 3<sup>rd</sup> semester

Its prerequisite(s): Geoinformatics I.

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+0

**Topics:**

*Delivering Public Goods*. Collective Action: Balancing Public and Particularistic Interests. Urban Planning and Regulation: The Challenge of the Market. The Evolution of the Institutional Approach in Planning. Varieties of Planning Experience. *Principle and Goals*: beauty, sustainability, justice, access, preservation, cultural diversity, resilience. *Plan Making*. Making Plans. Planning Case Studies. Visualizing Information. Modelling Urban Systems. Codes and Standards. *Frontiers of Persistent and Emergent Questions*. Urban Planning and Public Health. Suburban Sprawl and Smart Growth. Air Quality and Environmental Health. The Local Regulation of Climate Change. Housing: Planning and Policy Challenges. The Public Finance of Urban Forum. *Planning Agents*. The Civics of Urban Planning. Urban Informality. Citizen

Planners. The Real Estate Development Industry. The Policy of Planning. Planning and Citizenship.

Transportation system. Tasks, characteristics and development of transportation systems. Main goals of transportation development. The process of road design. Alignment of roads. Views of alignment. Travel need, reasons and consequences of mobility. Travel modes. Modal split. Traffic surveys. Sustainable transport modes. Definition, energy consumption. Capacity, capacity usage. Definition and criteria of Level of Service. Determination of traffic demand. Traffic operation. Relationships among basic traffic parameters. Design and operational analysis.

**Literature:**

*Compulsory:*

- Weber, R. & Crane, R. (Eds.), 2012: The Oxford Handbook of Urban Planning. Oxford University Press, Oxford. ISBN 978-0-19-023526-0
- Bayer, M., Frank, N. & Valerious, J., 2010: Becoming an Urban Planner. John Wiley and Sons, Hoboken, NJ. ISBN 978-0-470-27863-5

**Schedule**

1 <sup>st</sup> week Registration week	
<p><b>2<sup>nd</sup> week:</b>  <b>Lecture:</b> <i>Delivering Public Goods</i>. Collective Action: Balancing Public and Particularistic Interests. Urban Planning and Regulation: The Challenge of the Market. The Evolution of the Institutional Approach in Planning. Varieties of Planning Experience.</p> <p><b>4<sup>th</sup> week:</b>  <b>Lecture:</b> <i>Plan Making</i>. Making Plans. Planning Case Studies. Visualizing Information. Modeling Urban Systems. Codes and Standards.</p> <p><b>6<sup>th</sup> week:</b>  <b>Lecture:</b> <i>Frontiers of Persistent and Emergent Questions</i>. Air Quality and Environmental Health. The Local Regulation of Climate Change. Housing: Planning and Policy Challenges. The Public Finance of Urban Forum.</p>	<p><b>3<sup>rd</sup> week:</b>  <b>Lecture:</b> <i>Principle and Goals</i>: beauty, sustainability, justice, access, preservation, cultural diversity, resilience.</p> <p><b>5<sup>th</sup> week:</b>  <b>Lecture:</b> <i>Frontiers of Persistent and Emergent Questions</i>. Urban Planning and Public Health. Suburban Sprawl and Smart Growth. Air Quality and Environmental Health.</p> <p><b>7<sup>th</sup> week:</b>  <b>Lecture:</b> <i>Planning Agents</i>. The Civics of Urban Planning. Urban Informality. Citizen Planners. The Real Estate Development Industry. The Policy of Planning. Planning and Citizenship.</p>

<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Lecture:</b> Transportation system. Tasks, characteristics and development of transportation systems. The effect on exploration and development of regions. Main goals of transportation development.	<b>10<sup>th</sup> week:</b> <b>Lecture:</b> The process of road design. Alignment of roads. Requirements of alignment. Views of alignment. Elements of horizontal and vertical alignment.
<b>11<sup>th</sup> week:</b> <b>Lecture:</b> Travel need, reasons and consequences of mobility. Travel modes. Modal split. Traffic surveys. Semester project work discussion.	<b>12<sup>th</sup> week:</b> <b>Lecture:</b> Sustainable transport modes. Definition, energy consumption. Consultation of semester project work.
<b>13<sup>th</sup> week:</b> <b>Lecture:</b> Capacity, capacity usage. Definition and criteria of Level of Service. Determination of traffic demand. Composition of traffic flow. Flow speed and density. Handling of project works.	<b>14<sup>th</sup> week:</b> <b>Lecture:</b> Traffic operation. Relationships among basic traffic parameters. Design and operational analysis.
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

### Requirements

Semester project work in the topic of transportation.

Homework:                      Maximum:                      **50 points**                      Minimum:                      **26 points**

Requirements in the topic of urban planning

Mid-term test:                      Maximum:                      **50 points**                      Minimum:                      **26 points**

The course ends with **mid-semester grade**. Based on the summa points of the tests and the summa points of the homeworks, the mid-semester grade is defined according to the following calculation: 0-50 = fail; 51-62 = pass (2); 63-74 = satisfactory (3); 75-86 = good (4); 87-100 = excellent (5).

### Planning & Design of Transport Facilities

Code: MK3KOZ2S6SX17-EN

ECTS Credit Points: 6

Evaluation: exam

Year, Semester: 2<sup>nd</sup> year, 4<sup>th</sup> semester

Its prerequisite(s): Theory of Transportation & Basics in Urban Planning

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+2

### Topics:

Basics of transportation. Road networks in Hungary. Categories of roads. Parameters of vehicles and highways. Geodesy. Geographical and geotechnical parameters. Dewatering of roads. Horizontal and vertical alignment. Intersections. Sight distances. Road safety. Public transport. Pavements and its materials. Production processes. Bicycle facilities. Sustainable transport modes. Parking facilities. Sustainable transport modes. Definition, energy consumption. Road control systems. Level of service. Classical methods and traffic calming. Traffic operation. Relationships among basic traffic parameters. Design and operational analysis.

Railway parameters. Gauge. Kinetic knowledge. Railway track and rolling stock. Traction and resistance. Transitional geometry in railway motions. Railway substructure elements. Road-rail crossings. Rail points and switches. Railway superstructure concepts. Rails and its production. Welding and rail jointing methods. Sleepers and its usage. Rail ballast. Urban rail superstructures. Rail stations and yards. Track maintenance and construction methods.

### Literature:

#### Compulsory:

- Rogers M.: Highway Engineering, Blackwell, Oxford, 2003, ISBN 0-632-05993-1
- Chandra, Agrawal: Railway engineering, Oxford University Press, 2007, ISBN 978-0-19-568779-8

### Schedule

#### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Lecture:** Basics of transportation. Road networks in Hungary.

Railway parameters. Gauge. Kinetic knowledge.

**Practice:** Contour-map, design parameters. Handling and discussion of semester project work.

#### 4<sup>th</sup> week:

**Lecture:** *Geodesy. Geographical and geotechnical parameters.*

*Transitional geometry in railway motions.*

**Practice:** Site plan. Curves, straights. Superelevation.

#### 3<sup>rd</sup> week:

**Lecture:** Categories of roads. Parameters of vehicles and highways.

Railway track and rolling stock. Traction and resistance.

**Practice:** Contour gradient. Filling, cutting. Cross-section.

#### 5<sup>th</sup> week:

**Lecture:** Dewatering of roads. Horizontal and vertical alignment.

**Practice:** Calculation of horizontal curves. Consultation of homework.

**6<sup>th</sup> week:**

**Lecture:** Intersections. Sight distances. Road safety.

Railway substructure elements. Road-rail crossings.

**Practice:** Longitudinal sections. Planning parameters.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week****9<sup>th</sup> week:**

**Lecture:** Pavements and its materials. Production processes.

Rails and its production. Welding and rail jointing methods.

**Practice:** Consultation.

**11<sup>th</sup> week:**

**Lecture:** Parking facilities. Design parameters and usage.

Rail ballast. Complex examination.

**Practice:** Handling of homework. Consultation and preparation presentation of semester project works.

**13<sup>th</sup> week:**

**Lecture:** Road control systems. Level of service. Classical methods and traffic calming.

Rail stations and yards.

**Practice:** Presentation of semester project works.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week****7<sup>th</sup> week:**

**Lecture:** Public transport. Facilities and operation.

Rail points and switches. Railway superstructure concepts. Computing design data.

**Practice:** Discussion of semester project presentation. Signing for presentation dates.

**10<sup>th</sup> week:**

**Lecture:** Bicycle facilities. Sustainable transport modes. Design parameters.

Sleepers and its usage.

**Practice:** Vertical alignment. Consultation.

**12<sup>th</sup> week:**

**Lecture:** Sustainable transport modes. Definition, energy consumption.

Urban rail superstructures.

**Practice:** Presentation of semester project works.

**14<sup>th</sup> week:**

**Lecture:** Traffic operation. Relationships among basic traffic parameters. Design and operational analysis.

Track maintenance and construction methods.

**Practice:** Post-handling of homework.

Repetition possibility of semester project handling.

**Requirements**

Homework in in the topic of roads.

Homework: Maximum: **25 points** Minimum: **13 points**

Semester project work in the topic of railways.

Homework: Maximum: **25 points** Minimum: **13 points**

The signature is valid if the student reaches 26 points. No sign under 26 points.

The course ends with **an exam**. On the exam another 50 points can be achieved. Based on the summa points of the homework and the summa points of the exam, the grade is defined according to the following calculation: 0-50 = fail; 51-62 = pass (2); 63-74 = satisfactory (3); 75-86 = good (4); 87-100 = excellent (5).

## Theory of Design & Approximate Calculations

Code: MK3TAR1S4SX17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 2<sup>nd</sup> year, 4<sup>th</sup> semester

Its prerequisite(s): Strength of Materials

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+0

### Topics:

Reviewing the basic knowledge of mechanics and mathematics. Tasks of mechanics and mathematics. Discussing the Eurocode standard. Building and supporting structures. Forms of failure. Modelling Issues. Ways of building. Idealized support, support types, hierarchical structure, a two-dimensional structural model. Theory of building design basics. The capacity, safety, risk, life, the concept of reliability; strength and stability. The primary structural systems, deconstructing, contacts, supports. Demonstrating them on simple buildings. Weight; inclusion of standard payload. Examples to weight analysis, the dead load and determine the payload. Meteorological loads: snow load, wind load. Examples of weight analysis, the dead load and the live load. Snow load and wind load determination. The effect of temperature change. Loads under construction; extraordinary loads, fire effects. Examples of the determination of charges under construction. Different load conditions. Standard load combinations. Examples of standard load combinations. State of emergencies. Calculation in case of complex structures and load combinations.

### Literature:

#### *Compulsory:*

- MSZ-EN-1990-2002/A1 Eurocode
- MSZ-EN-1991-1-7 Eurocode
- MSZ-EN-1998-1 Eurocode
- Gulvanessian, H., Formichi P., Calgaro J-A.: Designers' Guide to Eurocode 1: Actions on Buildings, Thomas Telford Publishing, , 2009, ISBN 978-0727731562

## Schedule

### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Lecture:** Introduction. Reviewing the basic knowledge of mechanics and mathematics. Training Tasks of mechanics and mathematics. Discussing the Eurocode standard.

#### 4<sup>th</sup> week:

**Lecture:** Theory of building design basics. The capacity, safety, risk, life, the concept of reliability; strength and stability. The primary structural systems, deconstructing, contacts, supports. Demonstrating them on simple buildings.

#### 6<sup>th</sup> week:

**Lecture:** Meteorological loads: snow load, wind load. Examples of weight analysis, the dead load and determine the payload. Examples of snow load and wind load determination.

### 8<sup>th</sup> week: 1<sup>st</sup> drawing week

#### 9<sup>th</sup> week:

**Lecture:** Loads under construction; extraordinary loads, fire effects. Examples of the determination of charges under construction presentation of the impact of fire and earthquakes.

#### 11<sup>th</sup> week:

**Lecture:** Standard load combinations. The dimensioning of structures, specific questions. State of emergencies. Examples of standard load combinations.

#### 13<sup>th</sup> week:

**Lecture:** Load combinations. Examples and calculation. Mid-term test.

### 15<sup>th</sup> week: 2<sup>nd</sup> drawing week

#### 3<sup>rd</sup> week:

**Lecture:** Building and supporting structures; supporting structures requirements; its forms of failure. Modelling Issues: Ways of buildings; idealized support, support types, hierarchical structure, a two-dimensional structural model. Training Tasks of mechanics and mathematics.

#### 5<sup>th</sup> week:

**Lecture:** Constant burden: weight; inclusion of standard payload. Examples to weight analysis, the dead load and determine the payload.

#### 7<sup>th</sup> week:

**Lecture:** Wind load, the effect of temperature change. Examples of snow load and wind load determination. Consultation.

#### 10<sup>th</sup> week:

**Lecture:** Simultaneity, different load conditions; Preparation of the standard load combinations. Examples of standard load combinations.

#### 12<sup>th</sup> week:

**Lecture:** Internal forces. Calculation in case of complex structures and load combinations.

#### 14<sup>th</sup> week:

**Lecture:** Repetition of mid-term test. Assessment of homework. Closing of semester.

## Requirements

Obligatory semester project work

Homework:                      Maximum:                      **50 points**                      Minimum:                      **26 points**

Obligatory mid-term test

Mid-term test:                      Maximum:                      **50 points**                      Minimum:                      **26 points**

The course ends with **mid-semester grade**. Based on the summa points of the tests and the summa points of the homework assignments, the mid-semester grade is defined according to the following calculation: 0-50 = fail; 51-62 = pass (2); 63-74 = satisfactory (3); 75-86 = good (4); 87-100 = excellent (5).

## Steel Structures

Code: MK3TAR2S6SX17-EN

ECTS Credit Points: 5 credits

Evaluation: mid-semester grade

Year, Semester: 3<sup>rd</sup> year, 5<sup>th</sup> semester

Its prerequisite(s): Construction Materials, Theory of Design & Approximate Calculations

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+0

### Topics:

Steel usage in structural building. Fabrication and installation of steel structures. Failure forms of steel structures. Tensile, compressive, shear and combined resistance of the cross-sections. Stability of structural elements. Design of bars under compression. Design of structural elements under bending. Lateral torsional buckling. Bolted joints of steel structures. Welded joints of steel structures.

### Literature:

*Compulsory:*

- EN 1993-1-1: 2009 Design of steel structures Part 1-1.: General rules and rules for buildings
- EN 1993-1-8: 2005 Design of steel structures Part 1-8.: Design of joints

*Recommended:*

- Claudio Bernuzzi, Benedetto Cordova, Structural Steel Design to Eurocode 3 and AISC Specifications, Wiley Blackwell, 2016, ISBN 978-1-118-63128-7
- Jean-Pierre Jaspart, Klaus Weynand, Design of joints in Steel and Composite Structures, Ernst&Sohn, 2016, ISBN 978-3-433-02985-5

## Schedule

**1<sup>st</sup> week Registration week**

**2<sup>nd</sup> week:**

**Lecture:** Introduction. Steel as structural material. Method of choosing the right steel grade. Frequently used cross –section in steel structures. Fabrication and installation of steel structures. Repetition: Calculation of cross-sectional properties and stress distributions.

**4<sup>th</sup> week:**

**Lecture:** Interpretation of cross-sectional classes. Methods of determining effects and resistances depending on the cross-sectional classes. Classification of cross-sections with simple-, or complex loading. Determination of effective cross-sectional area for class4 structural elements.

**6<sup>th</sup> week:**

**Lecture:** Structural elements under bending. Cross-sectional resistance. Lateral torsional buckling resistance (normal and simplified method).

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Lecture:** Cross-sections under complex loading. Structural elements under complex loading. (simple cases)

**11<sup>th</sup> week:**

**Lecture:** Design task (part 2): design of the structural elements. (Cross-sectional checks, stability checks, checking of SLS.)

**13<sup>th</sup> week:**

**Lecture:** Simple welded joints. Design task (part 4): design of welded joints.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

**3<sup>rd</sup> week:**

**Lecture:** Study tour: Steel structure manufacturing plant + steel structures

**5<sup>th</sup> week:**

**Lecture:** Structural elements under tension and compression. Cross-sectional resistance. Buckling resistance.

**7<sup>th</sup> week:**

**Lecture:** Structural elements under shear. Shear stresses in thin-walled sections. Shear center. Shear resistance of the cross-section. Shear buckling. Torsion.

**10<sup>th</sup> week:**

**Lecture:** Failure modes of steel structures. Service limit state. Design task (part 1): clarification of the structure, determination of internal forces.

**12<sup>th</sup> week:**

**Lecture:** Simple bolted joints. Design task (part 3): design of bolted joints.

**14<sup>th</sup> week:**

**Lecture:** Test. Consultation.

**Requirements**

Participation at **lectures** is **compulsory**. Students must attend lectures and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at lectures will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring calculator and the printed materials of the lectures with them to each lecture. Active participation is evaluated by the teacher in every class. Students' active participation is required. Students have to **submit the test and the design task** as scheduled minimum at a sufficient level.

**A, for a signature:**

Student has to reach at least 30 points from the 60 points on the test.

**B, for a grade:**

Beyond the above a student has to get at least 20 points from the 40 points on the design task. The design task has to be handed in personally. One will get questions about the design task.

The course ends with a mid-semester grade. Based on the summa points of the test and the design task, the mid-semester grade is defined in the following way:

<b>Test:</b>	Maximum:	<b>60 points</b>	Minimum:	<b>30 points</b>
<b>Homework:</b>	Maximum:	<b>40 points</b>	Minimum:	<b>20 points</b>
<b>Summa points:</b>	Maximum:	<b>100 points</b>		<b>61 points</b>

0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5).

**Reinforced Concrete Structures**

Code: MK3TAR3S4SX17-EN

ECTS Credit Points: 5 credits

Evaluation: mid-semester grade

Year, Semester: 3<sup>rd</sup> year, 6<sup>th</sup> semester

Its prerequisites: Construction Materials, Theory of Design & Approximate Calculations

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+0

**Topics:**

History of concrete and reinforced concrete (RC) structures. Mechanical properties of fresh and hardened (structural) concrete. Mechanical properties of reinforcing bars, welded meshes, materials of prestressing. Corrosion of concrete and reinforcement. Definition of the environmental conditions, environmental or exposure classes, determination of the concrete cover. Bond in concrete. Normal force – elongation relationship for steel bars embedded in concrete. Moment – curvature relationship of RC cross sections. Definition of the state of stresses for RC sections, behaviour of uncracked and cracked section. Resistance of RC cross section in bending. Design of RC cross-section in bending. Shear behaviour of RC members.

Punching shear. Shear problem between web and flanges of T-section. Shear at interface between concretes cast at different times. Torsion of reinforced concrete members. Effect of normal force. Prestressing. Prestressing technologies. Prestressing force loss of prestressing, effective prestressing force. Design of prestressed members. Magnet lines. Ultimate moment capacity according to Mörsch. Effect of prestressing on shear. Limit states: design of RC members in ultimate limit states (ULS), analysis of RC members in serviceability states (SLS). Deflection control, crack width control, stress limitation.

**Literature:**

*Compulsory:*

- EN 1990:2002/A1:2005 Eurocode - Basis of structural design.
- EN 1991-1-1:2002 Eurocode 1: Actions on structures - Part 1-1: General actions - Densities, self-weight, imposed loads for buildings.

Torsion of reinforced concrete members.</p> <p><b>12<sup>th</sup> week:</b>  <b>Lecture:</b> Eccentricities, buckling length of RC bars, braced and unbraced members, first and second order moments, section design.</p> <p><b>14<sup>th</sup> week:</b>  Study trip</p>

Deflection control, crack width control, stress limitation.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / 2<sup>nd</sup> test**

**Requirements**

Participation at **lectures** is **compulsory**. Students must attend lectures and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at lectures will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator and the printed materials of the lectures with them to each lecture and practice. Active participation is evaluated by the teacher in every class. Students' active participation is required.

Students have to **submit all the two tests and the five design tasks** as scheduled minimum at a sufficient level.

**A, for a signature:**

In order to take the **signature** students has to reach the minimum points on the tests and the minimum points on the homeworks.

**B, for a grade:**

In order to take the **mid-semester grade** – minimum (2) pass grade, – minimum point of test and design task has to be taken (Summa minimum 61 points from 100 points). In order to take a mid-semester grade – minimum (2) pass grade – minimum point of tests and design tasks has to be taken. The minimum and the maximum points related to the tests and design tasks can be obtained are the follows:

---

**Tests:**

1. Test:	Maximum:	<b>20 points</b>	Minimum:	<b>12 points</b>
2. Test:	Maximum:	<b>20 points</b>	Minimum:	<b>12 points</b>
	Summa:	<b>40 points</b>		<b>24 points</b>

---

**Homework:**

1. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
2. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
3. Homework:	Maximum:	<b>10 points</b>	Minimum:	<b>6 points</b>
4. Homework:	Maximum:	<b>10 points</b>	Minimum:	<b>6 points</b>
5. Homework:	Maximum:	<b>11 points</b>	Minimum:	<b>7 points</b>
6. Homework:	Maximum:	<b>13 points</b>	Minimum:	<b>8 points</b>
	Summa:	<b>60 points</b>		<b>37 points</b>

---

<b>Summa points:</b>	Maximum:	<b>100 points</b>		<b>61 points</b>
----------------------	----------	-------------------	--	------------------

---

The course ends with a **mid-semester grade**. Based on the summa points of the tests and the summa points of the homework, the mid-semester grade is defined according to the following calculation:

<b>Score</b>		<b>Grade</b>
0 – 60 points:	fail	(no sign)
61 – 70 points:	pass	(2)
71 – 80 points:	satisfactory	(3)
81 – 90 points:	good	(4)
91 – 100points:	excellent	(5)

## **Bridges & Civil Engineering Structures**

Code: MK3TAR4S4SX17-EN

ECTS Credit Points: 4 credits

Evaluation: exam grade

Year, Semester: 4<sup>th</sup> year, 7<sup>th</sup> semester

Its prerequisite(s): Steel structures, Reinforced concrete structures, Geotechnics III.

Further courses are built on it: No

Number of teaching hours/week (lecture + practice): 4+0

### **Topics:**

History of bridges. Bridges classes. Norms and preliminary works. Foundations, substructures and equipment. Dilatations. Structure and building techniques of steel bridges. Steel beam bridges. Steel frame, arch and suspension bridges. Orthotropic plates. Structure and building techniques of concrete bridges. Concrete beam, frame and arch bridges. Prestressing techniques. Precast pretensioned girder bridges. Concrete box girders. Structures and building techniques of cable-stayed bridges. Composite and timber bridges. Test loading, monitoring and maintenance and strengthening techniques. Reservoirs, bunkers water-towers.

### **Literature:**

#### *Compulsory:*

- M. J. Ryall, G. A. R. Parke, J. E. Harding (2000): The Manual of Bridge Engineering, Thomas Telford
- H. G. Tyrrell (2008): History of Bridge Engineering; Stubbe Press

#### *Recommended:*

- fib Bulletin N° 39. Seismic bridge design and retrofit - structural solutions. State-of-art report (300 pages, ISBN 978-2-88394-079-6, May 2007).
- fib Bulletin N° 32. Guidelines for the design of footbridges. Guide to good practice (160 pages, ISBN 978-2-88394-072-7, November 2005).

- fib Bulletin N° 30. Acceptance of stay cable systems using prestressing steels. Recommendation (80 pages, ISBN 978-2-88394-070-3, January 2005)
- fib Bulletin N° 29. Precast concrete bridges. State-of-art report (84 pages, ISBN 978-2-88394-069-7, November 2004).
- fib Bulletin N° 9. Guidance for good bridge design. Part 1 – Introduction. Part 2 – Design and construction aspects. Guide to good practice (190 pages, ISBN 978-2-88394-049-9, July 2000).

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week:</b> <b>Lecture:</b> History of bridges. Bridges classes.	<b>3<sup>rd</sup> week:</b> <b>Lecture:</b> Norms and preliminary works.
<b>4<sup>th</sup> week:</b> <b>Lecture:</b> Foundations, substructures and equipment. Dilatations.	<b>5<sup>th</sup> week:</b> <b>Lecture:</b> Structure and building techniques of steel bridges. Steel beam bridges.
<b>6<sup>th</sup> week:</b> <b>Lecture:</b> Steel frame, arch and suspension bridges. Orthotropic plates.	<b>7<sup>th</sup> week:</b> Study trip
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week / 1<sup>st</sup> test</b>	
<b>9<sup>th</sup> week:</b> <b>Lecture:</b> Structure and building techniques of concrete bridges. Concrete beam, frame and arch bridges.	<b>10<sup>th</sup> week:</b> <b>Lecture:</b> Prestressing techniques. Precast pretensioned girder bridges. Concrete box girders.
<b>11<sup>th</sup> week:</b> <b>Lecture:</b> Structures and building techniques of cable-stayed bridges. Composite and timber bridges.	<b>12<sup>th</sup> week:</b> <b>Lecture:</b> Test loading, monitoring and maintenance and strengthening techniques.
<b>13<sup>th</sup> week:</b> <b>Lecture:</b> Reservoirs, bunkers water-towers.	<b>14<sup>th</sup> week:</b> Study trip
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week / 2<sup>nd</sup> test</b>	

## Requirements

Attendance at **lectures** is **compulsory**. Students must attend the lectures and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a lecture with another group. Attendance at lectures will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed lectures should be made up for at a later date, to be discussed with the tutor. Students are required to bring a calculator and the printed materials of the lectures to

each lecture. Active participation is evaluated by the teacher in every class. Students' active participation is required.

**A, for a signature:**

Students have to **submit all the two tests** as scheduled minimum at a sufficient level. During the semester there are two tests – the 1<sup>st</sup> test in the 8<sup>th</sup> week and the 2<sup>nd</sup> test in the 15<sup>th</sup> week. In order to gain the **signature**, minimum point of tests has to be taken (min. 40 points from 60 points).

**B, for a grade:**

In order to take an **exam grade** – minimum (2) pass grade – minimum point of tests (min. 40 points from 60 points) and exam points (min. 21 points from 40 points) has to be taken (Summa minimum 61 points from 100 points). The minimum and the maximum points related to the tests and design tasks can be obtained are the follows:

---

**Two tests:**

1. Test:	Maximum:	<b>30 points</b>	Minimum:	<b>20 points</b>
2. Test:	Maximum:	<b>30 points</b>	Minimum:	<b>20 points</b>
	Summa:	<b>60 points</b>		<b>40 points</b>

---

**Points required for signature:**

Maximum:	<b>60 points</b>	Minimum:	<b>40 points</b>
----------	------------------	----------	------------------

---

**Exam:**

Maximum:	<b>40 points</b>	Minimum:	<b>21 points</b>
----------	------------------	----------	------------------

---

**Summa points:**

Maximum:	<b>100 points</b>	Minimum:	<b>61 points</b>
----------	-------------------	----------	------------------

The course ends with an **exam grade**. Based on the summa points of the tests and the summa point of the exam, the exam grade is defined according to the following calculation:

---

<b>Score</b>	<b>Grade</b>
0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5).	

## Subject group “Differentiated Professional Subjects”

### Building Construction

Code: MK3MAG3S8SS17-EN

ECTS Credit Points: 8 credits

Evaluation: mid-semester grade

Year, Semester: 3<sup>rd</sup> year, 5<sup>th</sup> semester

Its prerequisite(s): Introduction to Building Construction

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 2+4

#### Topics:

Load bearing structures (walls, frames, floors, stairs and foundation). Wall-type buildings. Load bearing and space-limiting walls. Lintel, ring-beam. Homogeneous and mixed walls. Systems of construction and building (panels and cast wall construction, frames of reinforced concrete, steel and wood, dry-tech construction, ready-made building). Monolithic RC walls. Partitions. Horizontal load-bearing structures. Dense-rib, floor block, hollow ceramic block, self-formworking floors. Comparative evaluation of alternatives. Design principles and rules of floor systems. Balconies. Structures and roofing of pitched roof, built-in roof space. Structural variants of wooden roof trusses. Transitional and engineered roof trusses. Steel and RC pitched roof structures. Roof cladding. Soft sheet and plate covers. Metal structures of roof covers. Variants of sheetmetal covers. Energy balance of buildings: components, geometric ratio and groundplan arrangement of buildings, natural ventilation, energetic requirements, specific heat demand, procedure of energetic design and checking.

External - independent and built-together - stairs. Structural alternatives of internal stairs. Stone steps. Prefabricated RC, steel and wooden stairs. Accessories of stairs. Foundation and subsoil insulation. Building constructional considerations in selecting foundation mode. Subs, protecting and supporting structures for insulations. Insulating variants for different effects and requirements (coating, felt, expanding and mass insulations). Flat roofs. Main functional and additional layers. Sub, protection against wind suction. Draining vapour pressure. Plastic and coating-like waterproofings. Utilized flat roofs. Roof terraces with conventional and elastically bedded finishes. Variants of green roofs, functional layers. Waterproofing against functional waters.

In seminar there are six tasks to elaborate: 3 homework drawings and 3 workshop drawings.

#### Literature:

##### *Compulsory:*

- AMBROSE, James E.: Building structures, ISBN 0471540609 Wiley, New York 1993.
- BÖHÖNYEY, J.: Building construction encyclopedia. Iparterv, Budapest 1986.

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week:</b> <b>Lecture:</b> Wall-type buildings <b>Practice:</b> issuing the task 1 (homework drawing). Elaborating the workshop drawing 1.	<b>3<sup>rd</sup> week:</b> <b>Lecture:</b> Horizontal load-bearing structures <b>Practice:</b> consultation of task 1 (homework drawing)
<b>4<sup>th</sup> week:</b> <b>Lecture:</b> Pitched roof <b>Practice:</b> consultation of task 1 (homework drawing)	<b>5<sup>th</sup> week:</b> <b>Lecture:</b> Roof cladding <b>Practice:</b> consultation of task 1 (homework drawing)
<b>6<sup>th</sup> week:</b> <b>Lecture:</b> Passive houses <b>Practice:</b> submitting the task 1 (homework drawing). Elaborating the workshop drawing 2.	<b>7<sup>th</sup> week:</b> <b>Lecture: Mid-term test</b> <b>Practice:</b> Issuing the task 2 (homework drawing). Elaborating the workshop drawing 3.
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Lecture:</b> Stairs <b>Practice:</b> consultation of task 2 (homework drawing)	<b>10<sup>th</sup> week:</b> <b>Lecture:</b> Foundation and subsoil insulation <b>Practice:</b> consultation of task 2 (homework drawing)
<b>11<sup>th</sup> week:</b> <b>Lecture:</b> Flat roofs <b>Practice:</b> submitting the task 2 (homework drawing). Issuing task 3 (homework drawing).	<b>12<sup>th</sup> week:</b> <b>Lecture:</b> Waterproofing against functional waters. <b>Practice:</b> consultation of task 3 (homework drawing)
<b>13<sup>th</sup> week:</b> <b>Lecture:</b> Building visit <b>Practice:</b> consultation of task 3 (homework drawing)	<b>14<sup>th</sup> week:</b> <b>End-term test</b> Submitting task 3 (homework drawing).
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

## Requirements

### A, for a signature:

Attendance at lectures is recommended, but not compulsory.

Participation at practice is compulsory. Students must attend practice classes and may not miss more than three practice classes during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a

practice with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed practices should be made up for at a later date, to be discussed with the tutor. Students are required to bring the drawing tasks and drawing instruments for the course with them to each practice class. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

Students have to submit all the six drawing tasks as scheduled minimum at a sufficient level.

During the semester there are two tests: the mid-term test in the 7th week and the end-term test in the 14th week. Students have to sit for the tests.

### **B, for a grade:**

The course ends in a mid-semester grade. Based on the average of the marks of the drawings and the average of the test results, the mid-semester grade is calculated as an average of them:

- average grade of the six drawing tasks
- average grade of the two tests

The minimum requirement for the mid-term and end-term tests is 60%. Based on the score of the tests separately, the grade for the tests is given according to the following (score/grade): 0-59 % = fail (1); 60-69 % = pass (2); 70-79 % = satisfactory (3); 80-89 % = good (4); 90-100 % = excellent (5).

If the score of any test is below 60, the student once can take a retake test covering the whole semester material.

## **Building Design**

Code: MK3MAG4S6SS17-EN

ECTS Credit Points: 6 credits

Evaluation: mid-semester grade

Year, Semester: 3<sup>rd</sup> year, 6<sup>th</sup> semester

Its prerequisite(s): Building Construction

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 2+4

### **Topics:**

This course presents the functional rules of residential building design such as dimensions of rooms, fixtures and furniture with their space limitations. Descriptions from OTÉK, requirements from local development plans, specifications and calculation about forming facade. Significance of orientation. House featuring schema – detached, semi-detached, row houses, atriums. One and multi-storey residential buildings. Arrangements, ground plan systems and functional rules for design of staircases. Shaping the mass, adaptations to the

environment. Space requirements for parking, garbage storage, common areas and elevators in multi-unit residential buildings.

This course presents the design methodology of industrial and agricultural buildings. Functional rules of industrial and agricultural buildings by OTÉK, limitations about peripheral built-in areas, local development plans, main elements, structures. Specific technology requirements described by animal species. Health and environmental rules. Manure management. Structures and types of storage buildings and plant productions. Industrial parks and their regulations, standards. Logistics and service facility needs. Structures of industrial buildings, particularly in light weight structures. Design of social and service spaces, lockers and wet rooms.

Fire protections: Basic rules, structures and classification of buildings based on OTSZ.

**Literature:**

*Compulsory:*

- Malcolm Millais: Building structures
- Philip Garrison: Basic Structures for Engineers and Architects
- Ernst Neufert : Architects' data
- Jürgen Adam, Katharina Hausmann, Frank Jüttern: Industrial Buildings

**Schedule**

1 <sup>st</sup> week Registration week	
<p><b>2<sup>nd</sup> week:</b>  <b>Lecture:</b> Introduction, installation, site concept, content description of the master plan            Development of housing premises, their link to each other, function diagram  <b>Practice:</b> First homework - 25 pieces of furniture, fixtures copying in scale 1:50 M</p> <p><b>4<sup>th</sup> week:</b>  <b>Lecture:</b> Description of floor plan in residential buildings – function diagrams-detached, the boundary, semi-detached            Two-storey houses plan system, positioning stage, front height - Interpretation of building height.  <b>Practice:</b> Consultation.</p> <p><b>6<sup>th</sup> week:</b></p>	<p><b>3<sup>rd</sup> week:</b>  <b>Lecture:</b> Description of housing types, freestanding, semi-detached -terraced house, house chain, atrium - in terms of integration            Description of floor plan in residential buildings – function diagrams-detached, the boundary, semi-detached  <b>Practice:</b> Consultation.</p> <p><b>5<sup>th</sup> week:</b>  <b>Lecture:</b> Multi-unit residential building types, corridor-related systems            Ground floor plans, function diagrams            Corridor-related systems, ground floor plans.  <b>Practice:</b> Consultation.</p> <p><b>7<sup>th</sup> week:</b></p>

**Lecture:** Multi-residential building design, and it's problems, parking spaces, common areas, elevator. Multi-residential building ground floor plan focus on the structure design.

**Practice:** Second homework: 5 various built-storied house plan

**8<sup>th</sup> week: 1<sup>st</sup> drawing week**

**9<sup>th</sup> week:**

**Lecture:** Preparation, application for the courses, description of subject requirements, course schedule and literature lists, registration week

History of Hungarian agricultural architecture, government regulations, the provisions of relevant OTÉK

Opportunities for farm-site construction

**Practice:** Consultation.

**11<sup>th</sup> week:**

**Lecture:** Cattle, pig farming buildings

Storage Buildings in agriculture

Wine processing, wineries, Farm Buildings

**Practice:** Research- description of 3 processed agricultural structure- scheme, definition of static model and enveloping options

**13<sup>th</sup> week:**

**Lecture:** History of reinforced concrete, reinforced concrete long-span structures, the benefits of prefabrication

Steel structures, hall structures

Industrial coatings, classical and light enveloping, wall and roof structures

Details of structures, industrial gates.

**Practice:** Consultation.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week**

**Lecture: Mid-term test**

**Practice:** Consultation.

**10<sup>th</sup> week:**

**Lecture:** Presentation of livestock farms and prescriptions, animal health considerations and manure management

Horse farming, stables, farming buildings, sheep farming

**Practice:** Consultation.

**12<sup>th</sup> week:**

**Lecture:** Fire protection, basic concepts, classification of buildings, structures hall, fire distances, fire load

Industrial parks and it's benefits

Dressing room classification

**Practice:** Design of dressing rooms

**14<sup>th</sup> week:**

**End-term test**

**Requirements**

**A, for a signature:**

Attendance at lectures is recommended, but not compulsory.

Participation at practice is compulsory. Students must attend the practices and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Missed practices should be made up for at a later date, to be discussed with the tutor. Students are required to bring the drawing tasks and drawing instruments for the course with them to each practice. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

Students have to submit all the 3 drawing tasks as scheduled minimum at a sufficient level.

During the semester there are two tests: the mid-term test is in the 7th week and the end-term test in the 14th week. Students have to sit for the tests.

### **B, for a grade:**

The course ends in mid-semester grade. Based on the average of the marks of the drawings and the average of the test results, the mid-semester grade is calculated as an average of them:

- average grade of the 3 drawing tasks
- average grade of the two tests

The minimum requirement for the mid-term and end-term tests is 60%.

Based on the score of the tests separately, the grade for the tests is given according to the following (score/grade): 0-59 % = fail (1); 60-69 % = pass (2); 70-79 % = satisfactory (3); 80-89 % = good (4); 90-100 % = excellent (5).

If the score of any test is below 60, the student once can take a retake test covering the whole semester material.

## **Steel Structures for Buildings**

Code: MK3TAR5S6SS17-EN

ECTS Credit Points: 6 credits

Evaluation: exam

Year, Semester: 3<sup>rd</sup> year, 6<sup>th</sup> semester

Its prerequisite(s): Steel structures

Further courses are built on it: No

Number of teaching hours/week (lecture + practice): 4+2

### **Topics:**

Design of trusses. Design of frames. Design of bracing systems. Moment resistance of beam-to-column joints. Stiffness of beam-to-column joints. Moment resistance and stiffness of base

connections. Second order effects on frame structures. Fire design. Design of second order structural elements. Composite structures. Design of special steel structures.

**Literature:**

*Compulsory:*

- EN 1993-1-1: 2009 Design of steel structures Part 1-1: General rules and rules for buildings
- EN 1993-1-8: 2005 Design of steel structures Part 1-8: Design of joints
- EN 1993-1-2: 2005 Design of steel structures – Part 1-2: General rules- Structural fire design

*Recommended:*

- Claudio Bernuzzi, Benedetto Cordova, Structural Steel Design to Eurocode 3 and AISC Specifications, Wiley Blackwell, 2016, ISBN 978-1-118-63128-7
- Jean-Pierre Jaspart, Klaus Weynand, Design of joints in Steel and Composite Structures, Ernst&Sohn, 2016, ISBN 978-3-433-02985-5

**Schedule**

1 <sup>st</sup> week Registration week	
<p><b>2<sup>nd</sup> week:</b>  <b>Lecture:</b> Trusses. Design rules for trusses. Trusses used in frame structures. Bracing system for trusses. Buckling lengths in trusses. Resistance of the rods of the truss.  <b>Practice:</b> Introduction of the truss design task.</p> <p><b>4<sup>th</sup> week:</b>  <b>Lecture:</b> Design of welded connections under complex loading.  <b>Practice:</b> Design of welded connection between chord and braces. Design of welded connection between column and base plate.</p> <p><b>6<sup>th</sup> week:</b>  <b>Lecture:</b> Component method. Column web under tension. Column web under compression. Column web under shear. Beam web under tension. Beam flange under compression. Defining the moment resistance. Stiffness of the connection.</p>	<p><b>3<sup>rd</sup> week:</b>  <b>Lecture:</b> Welded connections of chord and braces. Failure modes. Gap-, and overlap type connections, T connections.  <b>Practice:</b> Connections in truss.</p> <p><b>5<sup>th</sup> week:</b>  <b>Lecture:</b> Beam-to-column connections. Component method. Failure modes of the “T” element. Column flange under bending. Bolt failure. End plate under bending.  <b>Practice:</b> Beam-to-column connection design.</p> <p><b>7<sup>th</sup> week:</b>  <b>Lecture:</b> Design of base joint with the component method. Defining the moment resistance and the stiffness.  <b>Practice:</b> Base joint design.</p>

**Practice:** Beam-to-column connection design.

**8<sup>th</sup> week: 1<sup>st</sup> drawing week:** Deadline for truss design task

**9<sup>th</sup> week:**

**Lecture:** Frames. Structural elements with variable cross-sections in frames. Cross-sections under complex loading. Structural elements under complex loading. Defining buckling lengths and support stiffness for stability checks.

**Practice:** Introduction of the frame design task.

**11<sup>th</sup> week:**

**Lecture:** Fire design of Steel Structures. Design of class4 structural elements. Design of second order structural elements.

**Practice:** Frame under fire. Second order structural elements.

**13<sup>th</sup> week:**

**Lecture:** Design of special steel structures

**Practice:** Test. Consultation.

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week:** Deadline for frame design task

**10<sup>th</sup> week:**

**Lecture:** Second order effects. Imperfections. The effect of the stiffness of the connections on the moment distribution. Design of the bracing system.

**Practice:** Second order effects on a frame.

**12<sup>th</sup> week:**

**Lecture:** Composite structures. Design of composite beam and column.

**Practice:** Design of composite beam and column.

**14<sup>th</sup> week:**

**Lecture:** Study tour - Implementation of a steel structure

**Practice:** Study tour - Implementation of a steel structure

## Requirements

Participation at **lectures and practice classes** is **compulsory**. Students must attend lectures and practices may not miss more than three lectures during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. The attendance will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring calculator and the printed materials of the lectures with them to each lecture and practice. Active participation is evaluated by the teacher in every class. Students active' participation is required.

Students have to **submit the test and the design tasks** as scheduled minimum at a sufficient level.

### A, for a signature:

A student has to reach at least 25 points from the 50 points on the test.

A student has to get at least 10 points from the 20 points on the truss design task.

Frame calculation has to be handed in.

**B, for a grade:**

The course ends with exam grade. The exam consists of a test and an oral part about the frame design task.

A student has to get at least 5 points from the 10 points on the test part of the exam.

A student has to get at least 10 points from the 20 points on the truss design task.

Based on the summa points of tests and design tasks, the exam grade is defined in the following way:

<b>Test:</b>	Maximum:	<b>50 points</b>	Minimum:	<b>25 points</b>
<b>Homework tasks:</b>				
Homework 1:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
Homework 2:	Maximum:	<b>20 points</b>	Minimum:	<b>10 points</b>
<b>Exam test:</b>	Maximum:	<b>10 points</b>	Minimum:	<b>5 points</b>
<b>Summa points:</b>	Maximum:	<b>100 points</b>		<b>61 points</b>

(score/grade): 0-60 = fail; 61-70 = pass (2); 71-80 = satisfactory (3); 81-90 = good (4); 91-100 = excellent (5).

## Reinforced Concrete Structures for Buildings

Code: MK3TAR7S6SS17-EN

ECTS Credit Points: 6 credits

Evaluation: exam grade

Year, Semester: 4<sup>th</sup> year, 7<sup>th</sup> semester

Its prerequisite(s): Reinforced Concrete Structures

Further courses are built on it: Yes

Number of teaching hours/week (lecture + practice): 4+2

### Topics:

Theory of elastic slab. Loads and stresses of elastic slab. Differential equation of the elastic slab. One- and two-way slabs. Approximate solutions for slabs, Marcus type solutions, FEM methods. Design and reinforcement detail of one-way and two-way slabs, the use of individual steel bars and welded steel meshes. Classification of flat slabs (column-head slabs, flat slabs). Design approaches for flat slabs. Reinforcement layout of flat slabs. Shear in flat slabs. Punching shear of flat slabs. Design of punching shear reinforcement, detail of punching shear reinforcement. Plastic analysis of reinforced concrete struts. Static and kinematic methods for determining the plastic capacity of RC structures. Plastic hinge. Plastic analysis of reinforced concrete slabs. Yield line theory. Application of static and kinematic methods for RC slabs.

Types, loads, classification and design considerations for RC columns. Braced and unbraced columns. Eccentricities, imperfections, second order effects. Design possibilities of RC columns. Loads and stresses of RC frames. Approximate determination of frame loads for vertical and horizontal loads. Beam and disturb zones and joints of RC frames, Analysis of different type of frame corners, corbels, half-end beams. Reinforced concrete walls. Loads and design of reinforced concrete walls. Determination of loads and stresses of the bracing systems of high rise reinforced concrete buildings. Special problem of the under reinforced structures subjected normal force. Elastic analysis of reinforced concrete deep beams and shear walls. Plastic analysis of reinforced concrete walls, shear walls and deep beams by strut-and-tile models. Design of reinforced concrete foundations. Types, properties, applications and design aspects of different kind of fibre reinforced concrete. Fire resistance of reinforced concrete structures, design for fire.

**Literature:**

*Compulsory:*

Application of static and kinematic methods for RC slabs.</p>	<p><b>3<sup>rd</sup> week:</b>  <b>Lecture / Practice:</b> Approximate solutions for slabs, Marcus type solutions, FEM methods.</p> <p><b>5<sup>th</sup> week:</b>  <b>Lecture / Practice:</b> Classification of flat slabs (column-head slabs, flat slabs). Design approaches for flat slabs. Reinforcement layout of flat slabs. Shear in flat slabs. Punching shear of flat slabs. Design of punching shear reinforcement, detail of punching shear reinforcement.</p> <p><b>7<sup>th</sup> week:</b>  Study trip</p>
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week / 1<sup>st</sup> test</b>	
<p><b>9<sup>th</sup> week:</b>  <b>Lecture / Practice:</b> Types, loads, classification and design considerations for RC columns. Braced and unbraced columns.</p>	<p><b>10<sup>th</sup> week:</b>  <b>Lecture / Practice:</b> Loads and stresses of RC frames. Approximate determination of frame loads for vertical and horizontal loads. Beam and disturb zones and joints of</p>

Eccentricities, imperfections, second order effects. Design possibilities of RC columns.

**11<sup>th</sup> week:**

**Lecture / Practice:** Reinforced concrete walls. Loads and design of reinforced concrete walls. Determination of loads and stresses of the bracing systems of high rise reinforced concrete buildings. Special problem of the under reinforced structures subjected normal force.

**13<sup>th</sup> week:**

**Lecture / Practice:** Design of reinforced concrete foundations. Types, properties, applications and design aspects of different kind of fibre reinforced concrete. Fire resistance of reinforced concrete structures, design for fire.

RC frames, Analysis of different type of frame corners, corbels, half-end beams.

**12<sup>th</sup> week:**

**Lecture / Practice:** Elastic analysis of reinforced concrete deep beams and shear walls. Plastic analysis of reinforced concrete walls, shear walls and deep beams by strut-and-tile models.

**14<sup>th</sup> week:**

Study trip

**15<sup>th</sup> week: 2<sup>nd</sup> drawing week / 2<sup>nd</sup> test**

### Requirements

Attendance at **lectures and practices** is **compulsory**. Students must attend lectures and practice classes and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice class with another group. Attendance at lectures and practice will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring the calculator and the printed materials of the lectures with them to each lecture and practice. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

#### A, for a signature:

In order to take **signature** students have to **submit all the two tests and the six homeworks** as scheduled minimum at a sufficient level. During the semester there are two tests – the 1<sup>st</sup> test in the 8<sup>th</sup> week and the 2<sup>nd</sup> test in the 15<sup>th</sup> week – and there are six homework tasks. In order to take the **signature**, minimum point of tests (min. 18 points from 30 points) and homework tasks min. 32 points from 50 points) has to be taken (min. 50 points from 80 points).

#### B, for a grade:

In order to take an **exam grade** – minimum (2) pass grade – minimum point of tests (min. 18 points from 30 points), minimum points of homeworks (min. 32 points from 50 points) and minimum points of exam points (min. 11 points from 20 points) has to be taken (Summa minimum 61 points from 100 points). The minimum and the maximum points related to the tests and design tasks can be obtained are the follows:

---

#### Two tests:

1. Test:	Maximum:	<b>15 points</b>	Minimum:	<b>9 points</b>
----------	----------	------------------	----------	-----------------

2. Test:	Maximum:	<b>15 points</b>	Minimum:	<b>9 points</b>
	Summa:	<b>30 points</b>		<b>18 points</b>

---

**Six homeworks:**

1. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
2. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
3. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
4. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
5. Homework:	Maximum:	<b>8 points</b>	Minimum:	<b>5 points</b>
6. Homework:	Maximum:	<b>10 points</b>	Minimum:	<b>7 points</b>
	Summa:	<b>50 points</b>		<b>32 points</b>

---

**Points required for signature:**

Maximum:	<b>80 points</b>	Minimum:	<b>50 points</b>
----------	------------------	----------	------------------

---

**Exam:**

Maximum:	<b>20 points</b>	Minimum:	<b>11 points</b>
----------	------------------	----------	------------------

---

**Summa points:**

Maximum:	<b>100 points</b>	Minimum:	<b>61 points</b>
----------	-------------------	----------	------------------

The course ends with an **exam grade**. Based on the summa points of the tests, the summa points of the homeworks and the summa point of the exam, the exam grade is defined according to the following calculation:

Score		Grade	
0 – 60	points:	fail	(no signature)
61 – 70	points:	pass	(2)
71 – 80	points:	satisfactory	(3)
81 – 90	points:	good	(4)
91 – 100	points:	excellent	(5)

## Timber & Masonry Structures

Code: MK3TAR8S4SB17-EN

ECTS Credit Points: 4

Evaluation: mid-semester grade

Year, Semester: 4<sup>th</sup> year, 1<sup>st</sup> semester

Its prerequisite(s): Construction Materials, Theory of Design & Approximate Calculations

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 4+0

**Topics:**

The subject consists of two main parts.

Topics of the Timber part

The structure of wood (macro- and microscopic properties). Wood preservations (fungies, insects, mositure, storage). Roof constructions and ceiling structures (traditional and modern structures). Timber design with EC 5 (basics - compressing, tension, bending). Timber connections (traditional- and designed connections with EC 5).

Topics of the Masonry part

Since the majority of the major masonry structures in Europe are historic structures, in the masonry part of the subject we discuss them with the following main topics:

Evolution of the masonry structural components. History of the structural engineering. Structural engineering of masonry architecture. Materials of masonry structures: stone, brick. Case studies.

As a practice, every student has to hold a 15-minute presentation about a significant masonry building of her/his homeland, and we discuss it with the other students. The main aspects of the presentations: introduction of the building (with map, photos and drawings), the history of the building with special emphasis on its construction, the structural components of the building and their structural behaviour, the building material used and its general characteristic, the general state of the load-bearing masonry structures of the building with special emphasis on the possible failures, suggestion to fix the failures (if there are any), bibliography (including internet sources).

**Literature:***Compulsory:*

- Jacques Heyman, The Stone Skeleton. Structural Engineering of Masonry Architecture, Cambridge University Press, 1997, ISBN 978-0-521-62963-8
- Nikolaus Pevsner, An Outline of European Architecture, J. Murray, 1948
- Forest Products Laboratory. 2010. Wood handbook—Wood as an engineering material. General Technical Report FPL-GTR-190. Madison, WI: U.S. Department of Agriculture, Forest Service, Forest Products Laboratory. 508 p.

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<p><b>2<sup>nd</sup> week:</b></p> <p><b>Lecture:</b> History and evolution of the masonry structures, part 1.</p> <p>Case study: the reconstruction of the masonry vault of the Avas church, Miskolc</p>	<p><b>3<sup>rd</sup> week:</b></p> <p><b>Lecture:</b> History and evolution of the masonry structures, part 2.</p> <p>Case study: the structural analysis of the (demolished) medieval system of St. Elisabeth's church in Kassa</p>
<p><b>4<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Evolution of the engineering, the classical theory of the masonry arch</p> <p>Case studies: the operation of the Wiener Bauhütte, the reconstruction of the towers of the Wiesenkirche, Soest</p>	<p><b>5<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Masonry walls and domes</p> <p>Student presentations</p>
<p><b>6<sup>th</sup> week:</b></p> <p><b>Lecture:</b> The masonry vault</p> <p>Student presentations</p>	<p><b>7<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Materials: brick and stone</p> <p><b>Test</b></p>
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<p><b>9<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Macro- and Microscopic structures of the wood</p>	<p><b>10<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Moisture relations and physical properties of wood</p>
<p><b>11<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Wood preservations (fungus, insects, moisture relations, storage)</p>	<p><b>12<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Roof constructions and ceiling structures</p>
<p><b>13<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Timber design with EC 5 (basics - compressing, tension, bending)</p>	<p><b>14<sup>th</sup> week:</b></p> <p><b>Lecture:</b> Timber connections (traditional- and designed connections with EC 5)</p>
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

## Requirements

Participation at **lectures** is **compulsory**. Students must attend lectures and may not miss more than three lectures during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. The staff of the department will record the attendance at lectures. In case of further absences, a medical certificate needs to be presented.

**For a signature and a grade:** every student has to fulfill the minimal requirements both in the Timber and the Masonry part.

The requirements of the **Masonry part** are the following:

**For a signature:** every student has to hold a 15-minute presentation about a significant masonry building of her/his homeland, discussing each of the following aspects: introduction of the building (with map, photos and drawings), the history of the building with special emphasis on its construction, the structural components of the building and their structural behavior, the building material used and its general characteristic, the general state of the load-bearing masonry structures of the building with special emphasis on the possible failures, suggestion to fix the failures (if there are any), bibliography (including internet sources)

**For a grade:** every student has to submit a successful test. The test consists of two parts: the first part is a construction of a thrust line of a masonry arch and some related questions; the second part contains theoretical questions. For a minimum (2) pass grade at least the thrust line construction must be fulfilled. For a maximum (5) grade every related question and every theoretical question has to be answered.

The requirements of the **Timber part** are the following.

**For a signature:** every student has to do a task until the end of the semester. This task includes some drawing, calculation parts. At the end they will get points on every parts of the task.

Submitted and accepted semester design task requirement is at least 61 points.

Parts and possible points of the task:

Points	max.
• draw the structural layout	20p
• draw at least 2 sections	20p
• timber volumen calculate	20p
• calculate the loads	20p
• <u>design one timber element</u>	<u>20p</u>
summa:	100p

**For a grade:** successful test about the Timber part

Possible results of Timber test:

Score	Grade
0 – 60 points:	fail (no sign)
61 – 70 points:	pass (2)
71 – 80 points:	satisfactory (3)
81 – 90 points:	good (4)
91 – 100points:	excellent (5)

**The final grade** is the average of the grades of the Timber and the Masonry parts.

## FEM Modelling

Code: MK3CAD2S5SB17-EN

ECTS Credit Points: 5

Evaluation: mid-semester grade

Year, Semester: 4<sup>th</sup> year, 7<sup>th</sup> semester

Its prerequisite: Theory of Girders, Steel Structures, RC Structures

Further courses are built on it: No

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

Short introduction of a FEM method. Introduction of a FEM program. Modelling of beams with the use of different elements. Modelling of frame structures. Modelling of trusses. Modelling of structural joints. Modelling of concrete slabs. Modelling of concrete pools. Modelling of timber structures.

### Literature:

#### *Compulsory:*

- HUEBNER K.H., DEWHIRST D.L., SMITH D.E., BYROM T.G.: The finite element method for engineers. ISBN 0 471 37078 9, John Wiley and Sons, Inc 2001.

[http://ftp2.myaxisvm.com/downloads.axisvm/manual/axisvm\\_manual13\\_en.pdf](http://ftp2.myaxisvm.com/downloads.axisvm/manual/axisvm_manual13_en.pdf)

#### *Recommended:*

- BOJTÁR I., GÁSPÁR Zs.: The finite element method for engineers. Terc, Budapest 2003.
- ZIENKIEWICZ O.C., TAYLOR R.L.: The finite element method I. ISBN 0 7506 6320 0, Butterworth-Heinemann, Oxford, 2000.
- BELYTSSCHKO T., LIU W.K., MORAN B.: Nonlinear finite elements for continua and structures. ISBN 0 471 98774 3, John Wiley, Chichester, 2000.

### Schedule

#### 1<sup>st</sup> week Registration week

#### 2<sup>nd</sup> week:

**Practice:** The FEM method.

#### 4<sup>th</sup> week:

**Practice:** Modelling simple structures as beam, cantilever.

#### 6<sup>th</sup> week:

**Practice:** Modelling steel frame in plane.

#### 3<sup>rd</sup> week:

**Practice:** Presentation of the features of the applied FEM software (AXIS)

#### 5<sup>th</sup> week:

**Practice:** Modelling truss girder in plane.

#### 7<sup>th</sup> week:

**Practice:** Trip.

<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Practice:</b> Modelling steel hall building in 3D	<b>10<sup>th</sup> week:</b> <b>Practice:</b> Modelling of complex timber roof structures. 3D
<b>11<sup>th</sup> week:</b> <b>Practice:</b> Modelling of concrete slab, supported with beams and columns	<b>12<sup>th</sup> week:</b> <b>Practice:</b> Modelling of structures with dynamic loads
<b>13<sup>th</sup> week:</b> <b>Practice:</b> Special features of the program	<b>14<sup>th</sup> week:</b> <b>Practice: End-term test</b>
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

## Requirements

### A, for a signature:

Participation at **practice** is compulsory. Students must attend the practices and may not miss more than three practice classes during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Students can't make up a practice with another group. Attendance at practice will be recorded by the practice leader. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring a calculator to each practice class. Active participation is evaluated by the teacher in every class. If a student's behaviour or conduct doesn't meet the requirements of active participation, the teacher may evaluate his/her participation as an absence due to the lack of active participation in class.

During the semester the students have to make FEM models, and they have to send all of them to the leader of the practice at the end of every lesson. If they are correct the student can get signature.

### B, for a grade:

The course ends with a **mid-semester grade**. Based on the points of the tasks and on the **end-term test** which is written in the **14<sup>th</sup> week**.

The grade is given according to the following table:

%	Grade
0-59	fail (1)
60-69	pass (2)
70-79	satisfactory (3)
80-89	good (4)
90-100	excellent (5)

## Structural Design Project

Code: MK3TAR9S6SB17-EN

ECTS Credit Points: 6 credits

Evaluation: mid-semester grade

Year, Semester: 4<sup>th</sup> year, 7<sup>th</sup> semester

Its prerequisite(s): Building design

Further courses are built on it: Yes/No

Number of teaching hours/week (lecture + practice): 0+4

### Topics:

Based on the previous study of the students two complex architectural and structural design project must be worked out during the semester composed of 2×5×4=40 hours working hours at the department. The project tasks are determined personally - individual projects which based on the final results of the Building design course and partially based on the Building construction, Steel structures, Reinforced concrete structures courses - but the work can be done in a small group - team works - by the participation of 4 students representing the 4 main activity fields: architectural, steel structure, reinforced concrete structures and timber or masonry structure design. Results of design projects must be presented at the end of the projects.

### Literature:

#### *Compulsory:*

- EN 1990:2002/A1:2005 Eurocode - Basis of structural design.
- EN 1991-1-1:2002 Eurocode 1: Actions on structures - Part 1-1: General actions - Densities, self-weight, imposed loads for buildings.

## Schedule

<b>1<sup>st</sup> week Registration week</b>	
<b>2<sup>nd</sup> week:</b> <b>Lecture:</b> Definition of the 1 <sup>st</sup> design project. Architectural appearances. Structural geometry, function, effects and loads. Preliminary calculations.	<b>3<sup>rd</sup> week:</b> <b>Lecture:</b> Design of structural steel members and connections, materials, corrosion and fire protection. Detailing.
<b>4<sup>th</sup> week:</b> <b>Lecture:</b> Design of timber members and connectors, definition of materials, corrosion and fire protection of members. Detailing.	<b>5<sup>th</sup> week:</b> <b>Lecture:</b> Design of reinforced concrete members and reinforcement, definition of materials, corrosion and fire protection of members. Detailing.
<b>6<sup>th</sup> week:</b> <b>Lecture:</b> Presentation of 1 <sup>st</sup> projects.	<b>7<sup>th</sup> week:</b> Study trip
<b>8<sup>th</sup> week: 1<sup>st</sup> drawing week</b>	
<b>9<sup>th</sup> week:</b> <b>Lecture:</b> Definition of the 2 <sup>nd</sup> design project. Architectural appearances. Structural geometry, function, effects and loads. Preliminary calculations.	<b>10<sup>th</sup> week:</b> <b>Lecture:</b> Design of timber members and connectors, definition of materials, corrosion and fire protection of members. Detailing.
<b>11<sup>th</sup> week:</b> <b>Lecture:</b> Design of structural steel members and connections, materials, corrosion and fire protection. Detailing.	<b>12<sup>th</sup> week:</b> <b>Lecture:</b> Design of reinforced concrete members and reinforcement, definition of materials, corrosion and fire protection of members. Detailing.
<b>13<sup>th</sup> week:</b> <b>Lecture:</b> Presentation of 2 <sup>nd</sup> projects.	<b>14<sup>th</sup> week:</b> Study trip
<b>15<sup>th</sup> week: 2<sup>nd</sup> drawing week</b>	

## Requirements

Participation at **practice classes** is **compulsory**. Students must attend **practice** and may not miss more than three times during the semester. In case a student does so, the subject will not be signed and the student must repeat the course. Attendance at practice classes will be recorded by the staff of the department. Being late is counted as an absence. In case of further absences, a medical certificate needs to be presented. Students are required to bring the calculator and the printed materials of the lectures with them to each practices. Active participation is evaluated by the teacher in every class. Active student's participation should be required.

Students have to **submit all the two design tasks** as scheduled minimum at a sufficient level. In order to take a **mid-semester grade** – minimum (2) pass grade, – minimum point of design task

and presentation has to be taken (Summa minimum 61 points from 100 points). In order to take a mid-semester grade – minimum (2) pass grade – minimum point of design tasks has to be taken. The minimum and the maximum points related to the design tasks can be obtained are the follows:

---

**Design projects:**

1. Design project:	Maximum: <b>30 points</b>	Minimum: <b>19 points</b>
2. Presentation of the 1 <sup>st</sup> project:	Maximum: <b>10 points</b>	Minimum: <b>6 points</b>
3. Design project:	Maximum: <b>50 points</b>	Minimum: <b>30 points</b>
4. Presentation of the 2 <sup>nd</sup> project:	Maximum: <b>10 points</b>	Minimum: <b>6 points</b>
<b>Summa points:</b>	Maximum: <b>100 points</b>	<b>61 points</b>

---

The course ends with a **mid-semester grade**. Based on the summa points of the design projects, the mid-semester grade is defined according to the following calculation:

0 – 60 points: fail (no sign); 61 – 70 points: pass (2); 71 – 80 points: satisfactory (3); 81 – 90 points: good (4); 91-100 points: excellent (5)

## DIPLOMA

Within 30 days of the successful final exam the diploma is issued and given out by the Faculty at the graduand's special request. Otherwise, the diploma will be awarded to him/her at the graduation ceremony of the Faculty.

The diploma is an official document decorated with the coat of arms of Hungary which verifies the successful completion of studies in the Civil Engineering undergraduate program. It contains the following data: name of HEI (higher education institution); institutional identification number; serial number of diploma; name of diploma holder; date and place of his/her birth; level of qualification; training program; specialization; mode of attendance; place, day, month and year issued. Furthermore, it has to contain the dean's (or vice-dean's) original signature and the seal of HEI. The University keeps a record of the diplomas issued.

At the graduand's special request a certificate on the completion of studies is issued. The document does not contain any reference to qualification, it merely proves that the candidate has taken a successful final exam. The Faculty keeps a record of the certificates issued.

### *Calculating diploma grade*

Grade=(A+B+C+D)/4, where

A: Weighted grade point average

B: Average of comprehensive exams

C: Average of the grades of the thesis (evaluation of the supervisor and the referee)

D: Grade for final exam presentation

### *Classification of the award on the bases of the calculated average:*

With honours	4,81 – 5,00
Excellent	4,51 – 4,80
Good	3,51 – 4,50
Satisfactory	2,51 – 3,50
Pass	2,00 – 2,50

### *Award with Distinction*

An award with Distinction is permitted where a student obtained grade 5 in all subjects of the final exam. The average of thesis grade, his/her exam grades and mid-semester grades during his/her studies is at least 4,00. Moreover, he/she is not permitted to have a grade worse than grade 3 during his/her studies.

MODEL CURRICULUM OF CIVIL ENGINEERING BSC - STRUCTURAL ENGINEERING SPECIALIZATION

The curriculum of the program is available in excel format on the webpage of the Faculty of Engineering (<https://eng.unideb.hu/en/node/195>).
